PREFACE TO PART SIX

The present instalment concludes the enumeration of the American Mesomyodian Passeres, the other families of that section having been dealt with in the three preceding parts. For the sake of convenience, it has been deemed advisable not to include in Part VI any other family, but to restrict it to the catalogue of the Manakins, Chatterers and allies, which form a natural group of closely related birds.

As stated in the preface to Part V, proper definition of the various families of the Mesomyodian Passeres, particularly of the Haploophonae, is unusually difficult owing to the incompleteness of data on their anatomical structure, and the reference of certain genera to one family rather than to another must largely be regarded as provisional. Moreover, the exact status of two groups now ranked as families—the Sharp-Bills and the Cocks-of-the-Rock—is quite unsettled, and further researches into their anatomical peculiarities may lead to their suppression.

Publication of this volume has unexpectedly been delayed. The greater part of the manuscript having been compiled in 1926 and 1927, the results of recent investigations by other students have not been considered beyond their inclusion in footnotes, wherever it was possible to make such additions. On the other hand, the long time that has elapsed since its preparation afforded me an opportunity to examine much pertinent material (including many types) in various museums in this country as well as in Europe. The account of certain genera of Manakins is practically based on the splendid series of these birds in the collections at Pittsburgh and Munich.

As in the past, the author has enjoyed, in the performance of his task, the cooperation of museums and numerous correspondents by the generous loan of material and other acts of courtesy for which he wishes to publicly express his gratitude.

Acknowledgments are particularly due to Mr. Outram Bangs, of the Museum of Comparative Zoology, Cambridge, Massachusetts; Mons. J. Berlioz, of the Muséum d'Histoire Naturelle, Paris; Dr. F. M. Chapman, of The American Museum of Natural History, New York; Mr. C. F. Cooper, of the University Museum, Cambridge, England; Mr. Donald R. Dickey and Mr. A. van Rossem, of Pasadena, California; Count Nils Gyldenstolpe, of the Stockholm Museum,

Sweden; Mr. N. B. Kinnear, of the British Museum, London, England; Dr. A. Laubmann, of the Zoological Museum, Munich; Dr. C. W. Richmond and Mr. J. H. Riley, of the U. S. National Museum, Washington, D. C.; Lord Rothschild, of Tring, England; Dr. Simpson, of the Free Public Museums, Liverpool, England; Dr. E. Stresemann, of the Zoological Museum, Berlin, Germany; and Mr. W. E. Clyde Todd, of the Carnegie Museum, Pittsburgh, Pennsylvania.

Mr. Charles Westcott, of Springfield, Massachusetts, again has been very helpful in checking references and revising the manuscript for the press.

NOVEMBER 2, 1929

PART VI

ORDER PASSERIFORMES—Continued.

Suborder MESOMYODI-Continued.

FAMILY OXYRUNCIDAE.1

SHARP-BILLS.

Genus OXYRUNCUS Temminck.

- Oxyruncus TEMMINCK, Anal. Syst. Gén. d'Orn., in Man. d'Orn., 2nd ed., 1, p. LXXX, Oct., 1820—generic characters, but no genotype indicated.
- Oxyrhyncus Swainson, Zool. Illust., 1, No. 9, pl. 49, July, 1821—new name for Oxyruncus Temminck; type by monotypy Oxyrhyncus cristatus Swainson.
- Oxyrhynchus (not of LEACH, 1816) TEMMINCK, Nouv. Rec. Pl. Col., livr. 21, pl. 125, April, 1822—type by monotypy Oxyrhynchus flammiceps TEMMINCK = Oxyrhyncus cristatus SWAINSON.
- Oxyrhamphus Strickland, Ann. Mag. Nat. Hist., 6, p. 420, 1841—new name for Oxyrhynchus Temminck, preoccupied.
- Oxyramphus Bonaparte, Consp. Av., 1, p. 211, 1850—emendation.
- *Oxyruncus cristatus cristatus (Swainson). Crested Sharp-Bill.
 - Oxyrhyncus cristatus Swainson, Zool. Illust., 1, No. 9, pl. 49, July, 1821—Brazil.
 - Oxyrhynchus flammiceps TEMMINCK, Nouv. Rec. Pl. Col., livr. 21, pl. 125, April, 1822—Brazil.
 - Oxyrhynchus serratus MIKAN, Del. Flor. et Faun. Bras., fasc. 3, pl. [17], 1823
 —Rio de Janeiro (descr. adult and young).
 - Oxyrhamphus flammiceps Burmeister, Syst. Übers. Th. Bras., 3, p. 33, 1856—Brazil; Pelzeln, Orn. Bras., 1, p. 42, 1868—Rio de Janeiro and Rio

¹The affinities of this family are not satisfactorily determined, and it may become necessary to merge it with the Cotingidae.

2 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Paraná, São Paulo; Berlepsch, Journ. Orn., 21, p. 254, 1873—Blumenau, Santa Catharina; Sclater, Cat. B. Brit. Mus., 14, p. 281, 1888—"Novo" Friburgo, Brazil; Ihering, Rev. Mus. Paul., 3, p. 206, 1899—Iguapé, São Paulo; idem, 1. c., 4, p. 156, 1900—Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 296, 1907—Estação Rio Grande, Iguapé, Itapura, and Ubatuba (São Paulo), Marianna (Minas Geraes), and Espirito Santo; Bertoni, Rev. Inst. Parag., 1907,—(sep. p. 5)—Paraguay.

- Oxyruncus cristatus cristatus RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 333, 1907—southeastern Brazil.
- Oxyrhamphus flammiceps paraguayensis CHUBB, Ibis, 1910, p. 597—Sapucay, Paraguay.
- Oxyruncus flamiceps paraguayensis BERTONI, Faun. Parag., p. 57, 1914—Sapucay, Paraguay.

Range: Wooded region of southeastern Brazil, from Espirito Santo and southern Minas Geraes (Marianna) to Santa Catharina, and Paraguay (Sapucay).

1: Brazil (Victoria, São Paulo 1).

Oxyruncus cristatus hypoglaucus (Salvin and Godman). WHITE-BELLIED SHARP-BILL.

- Oxyrhamphus hypoglaucus Salvin and Godman, Ibis, (5), 1, p. 206, 1883—Roraima and Merumé Mountains, British Guiana; Salvin, l.c., 1885, p. 291—same localities; Sclater, Cat. B. Brit. Mus., 14, p. 282, 1888—same localities.
- Oxyruncus hypoglaucus CHUBB, Birds Brit. Guiana, 2, p. 240, 1921—Roraima and Merumé Mountains.

Range: Mountain ranges of British Guiana (Roraima, Merumé).

Oxyruncus cristatus brooksi Bangs and Barbour. BROOKS'S SHARP-BILL.

¹Birds from Paraguay appear to be inseparable from others taken in Brazil. When describing O. f. paraguayensis, Chubb compared the Paraguayan series with a number of old skins of faded coloration. Recently collected Brazilian specimens, however, are fully as bright, both above and below, as Foster's birds from Sapucay.

Material examined.—Brazil: Rio de Janeiro 5; Rio Paraná, São Paulo 1; Victoria, São Paulo 4; Blumenau, Santa Catharina 1.—Paraguay: Sapucay 5.

²Oxyruncus cristatus hypoglaucus (SALVIN and GODMAN): Similar to O. c. cristatus, but under parts white, with only the sides and tail coverts tinged with pale greenish yellow; lores and cheeks white instead of pale yellow; median upper wing coverts more conspicuously margined with yellow; back slightly brighter green.

Material examined.—British Guiana: Roraima 6.

³Oxyruncus cristatus brooksi Bangs and Barbour: Nearest to O. cristatus frater, and wings similarly marked; but under parts white, washed with pale greenish yellow on sides and tail coverts only, as in O. c. hypoglaucus, and black

Oxyruncus brooksi Bangs and Barbour, Bull. Mus. Comp. Zool., 65, p. 220, 1922—Mount Sapo, eastern Panama (type examined); Griscom, l.c., 69, p. 178, 1929—Cana.

Range: Eastern Panama (Mount Sapo and Cana, Darién).

*Oxyruncus cristatus frater (Sclater and Salvin). Costa Rican Sharp-Bill.

- Oxyrhamphus frater Sclater and Salvin, P.Z.S. Lond., 1868, p. 326—Calovevora, Veragua; idem, Exotic Orn., Part 9, p. 131, pl. 66 (adult female and young), 1868—Veragua and Costa Rica; Salvin, P.Z.S.Lond., 1870, p. 194—Calovevora and Chitrá, Veragua; Sclater, Cat. B. Brit. Mus., 14, p. 281, 1888—Calovevora and Castillo, Veragua, and Costa Rica; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 2, 1888—Costa Rica and Panama.
- Oxyrhynchus flammiceps (not of Temminck) Lawrence, Ann. Lyc. Nat. Hist. N.Y., 9, p. 106, 1868—San José, Costa Rica; Frantzius, Journ. Orn., 17, p. 304, 1869—Orosi, Costa Rica; Salvin, Ibis, 1869, p. 314—Costa Rica (crit.).
- Oxyruncus cristatus frater Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 334, 1907—Panama and Costa Rica (monog.); CARRIKER, Ann. Carnegie Mus., 6, p. 736, 1910—Santa María de Dota, San Carlos, La Vijagua, and Cariblanco de Sarapiquí, Costa Rica (habits).

Range: Costa Rica and Panama (Chiriquí and Veraguas).

1: Costa Rica (Buena Vista de San Carlos 1).

FAMILY PIPRIDAE.

MANAKINS.

Genus PIPRITES Cabanis.

Piprites CABANIS, Arch. Naturg., 13, (1), p. 234, 1847—type by monotypy Pipra pileata TEMMINCK.

Hemipipo Cabanis, l.c., p. 234, 1847—type by subs. desig. (Gray, 1855, p. 55) Pipra chloris Temminck.²

spots less numerous and more restricted than in any other race, becoming evanescent on the flanks. Superficially resembling O. c. hypoglaucus in white under parts, but back much brighter as well as more yellowish green, and larger wing coverts and tertials much more broadly margined with yellow. Wing (adult male) 90, (female) 88-90; tail 54-57; bill 16-18.

Material examined.—Panama: Mount Sapo (including the type) 3.

¹Oxyruncus cristatus frater (Sclater and Salvin): Like O. c. cristatus with yellow under parts; but above much brighter, fresher green and wing coverts as well as tertials much more broadly edged with yellow.

Material examined.—Costa Rica: La Vijagua 2, San Carlos 2.—Panama: Boquete, Chiriquí 1.

²The insignificant divergency in structure and the similarity of the sexes seem hardly sufficient grounds for generic separation of this group.

Piprites pileatus (Temminck). PILEATED MANAKIN.

Pipra pileata (NATTERER MS.) TEMMINCK, Nouv. Rec. Pl. Col., livr. 29, pl. 172, fig. I (male), Dec., 1822—Brazil = Curityba, state of Paraná (descr. of male and female).

Piprites pileata Burmeister, Syst. Übers. Th. Bras., 2, p. 449, 1856—Brazil. Piprites pileatus Pelzeln, Orn. Bras., 2, p. 126, 1868—Curytiba, Paraná (spec. examined); Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 1, pl. 1, (male, female), 1887—Curytiba; Sclater, Cat. B. Brit. Mus., 14, p. 284, 1888—Brazil; Ihering and Ihering, Cat. Faun. Braz., 1, p. 297, 1907—Campos do Jordão, São Paulo; Hellmayr in Wytsman, Gen. Av., Part 9, p. 13, 1910—"Novo" Friburgo, Rio and Curytiba, Paraná; Sztolcman, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 178, 1926—Invernadinha, Cara Pintada and Vermelho, Paraná.

Range: Wooded region of southeastern Brazil, from Rio de Janeiro (Nova Friburgo) to Paraná.¹

Piprites chloris (Temminck). TEMMINCK'S MANAKIN.

Pipra chloris (NATTERER MS.) TEMMINCK, Nouv. Rec. Pl. Col., livr. 29, pl. 172, fig. 2, Dec., 1822—Brazil (type from Ypanemá, São Paulo, in Vienna Museum examined).

Piprites chloris Burmeister, Syst. Übers. Th. Bras., 2, p. 449, 1856—"Im Innern Brasiliens (Goyaz, Matto Grosso)", errore; Pelzeln, Orn. Bras., 2, p. 126, 1868—Ypanemá, São Paulo (spec. examined); Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 3, pl. 2, fig. 1, 1887—Ypanemá; Sclater, Cat. B. Brit. Mus., 14, p. 284, 1888—Brazil; Ihering, Rev. Mus. Paul., 3, p. 207, 1899—Piracicaba and Iguapé, São Paulo; idem, Cat. Faun. Braz., 1, p. 297, 1907—Piracicaba and Rio Feio, São Paulo; Bertoni, Rev. Inst. Parag., Asunción, p. 5, 1907—Alto Paraná, Paraguay, and Misiones; Chubb, Ibis, 1910, p. 598—Sapucay, Paraguay; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 432, 1910—Paraguay and Misiones; Bertoni, Faun. Parag., p. 58, 1914—Alto Paraná.

Piprites chloris Chloris Hellmayr in Wytsman, Gen. Av., Part 9, p. 13, pl. 2, fig. 8, 1910—São Paulo and Espirito Santo, Brazil; idem, Verh. Orn. Ges. Bay., 12, p. 137, 1915—Braço do Sul, near Victoria, Espirito Santo (crit.).

Hemipipo chloris SZTOLCMAN, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 178, 1926—Salto de Ubá and Porto Mendes, Paraná.

Range: Wooded region of southeastern Brazil, from Espirito Santo to Paraná; Paraguay; northeastern Argentina (Misiones).²

*Piprites chloris chlorion (Cabanis). GRAY-BREASTED MANAKIN.

Hemipipo chlorion Cabanis, Arch. Naturg., 13, (1), p. 234, 1847—Cayenne; idem in Schomburgk, Reisen Brit. Guiana, 3, p. 697, 1848—Cayenne.

¹Material examined.—Rio de Janeiro: Nova Friburgo I, Rio I.—Paraná: Curityba 8.

²Material examined.—Brazil, São Paulo: Ypanemá (including the type) 5, Victoria 2, Fazenda Cayoá, Salto Grande do Rio Paranapanema 3; Braço do Sul, near Victoria, Espirito Santo 1.—Paraguay: Sapucay 2.

Piprites chlorion PELZELN, Orn. Bras., 2, p. 126, 1868-part, Barra do Rio Negro [= Manáos] and Borba, Rio Madeira (spec. examined); SALVIN and GODMAN, Ibis, 1882, p. 78-British Guiana (crit.); SALVIN, l.c., 1885, p. 299-Bartica Grove, Merumé Mts., and Roraima; PELZELN, MADARÁSZ and LORENZ, Monog. Pipr., p. 5, pl. 2, fig. 2 ("male"), 1887 -part, descr. of male and hab. French and British Guiana, Barra [do Rio Negro], and Borba, Rio Madeira; Sclater, Cat. B. Brit. Mus., 14, p. 285, 1888-Roraima, Bartica Grove, and Merumé Mts., British Guiana; SNETHLAGE, Journ. Orn., 55, p. 288, 1907—Cussary, lower Amazon (spec. examined); idem, 1.c., 56, p. 504, 1908-Villa Braga, Rio Tapajóz (spec. examined); BER-LEPSCH, Nov. Zool., 15, p. 315, 1908—Cavenne; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 361, 1914—Quati-purú, Rio Guamá (Santa Maria de São Miguel), Cussary, Rio Tapajóz (Goyana, Villa Braga), Rio Jary (Santo Antonio da Cachoeira); BEEBE, Zoologica (N.Y.), 2, p. 91, 1916—Utinga, Pará; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 72, 1918-Lelydorp, Surinam; CHUBB, Birds Brit. Guiana, 2, p. 251, 1921—Ituribisi River, Supenaam, Bartica, Roraima, and Merumé Mts.; SNETHLAGE, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 63, 1926—Tury-assú, Maranhão.

Piprites chloris chlorion HELLMAYR, Nov. Zool., 17, p. 302, 1910-part, Borba, Rio Madeira; idem in WYTSMAN, Gen. Av., Part 9, p. 13, 1910-Cayenne, British Guiana, and northern Brazil; CHAPMAN, Amer. Mus. Novit., 138, p. 7, 1924—(?) foot of Mount Duida, upper Orinoco, and Cussary, lower Amazon; HELLMAYR, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 333, 1929-Tury-assú, Maranhão.

Range: French, Dutch, and British Guiana; northern Brazil, west to Manáos and the lower Rio Madeira (Borba), east to northern Maranhão (Tury-assú).1

1: Brazil (Tury-assú, Maranhão 1).

Piprites chloris bolivianus Chapman. 2 BOLIVIAN GREENISH MAN-AKIN.

Specimens from British Guiana are conspicuous for their grayish hind neck and their uniform pale gray breast and abdomen, strongly contrasted with the yellow throat and tail coverts, while the rectrices are but indistinctly tipped with yellowish. An adult male from Borba, Rio Madeira, is similar, except for wider tail tips. Another male from Manáos and a female from Cussary (south bank of the lower Amazon) are slightly smaller; and, besides, they show a faint yellowish tinge on the anal region. A single male from Maranhão (Tury-assú) is grayer above than any other specimen examined.

Material examined.—French Guiana: Cayenne 1.—British Guiana: Bartica Grove I, Roraima 5, Quonga I.—Brazil: Manáos I; Cussary I; Villa Braga, Tapajóz I; Borba, Rio Madeira I; Tury-assú, Maranhão I.

²Piprites chloris bolivianus CHAPMAN: Nearly allied to P. c. chlorion, but with much smaller bill; grayish breast and sides tinged with yellowish; middle of abdomen brighter yellow; rectrices broadly tipped with pale yellowish as in P. c. tschudii. Wing 67-69; tail 50-53; bill 9.

A specimen from Bolivia has the nape extensively gray like P. c. chlorion; while

the two Brazilian birds, in this respect, rather resemble P. c. tschudii.

Material examined.—Bolivia: Quebrada Onda, Yungas of Cochabamba (& ad., June 28, 1892. G. Garlepp. Berlepsch Collection) I.—Brazil: Salto do Girão, Rio Madeira (& imm., Oct. 15, 1829. J. Natterer) I; Engenho do Gama, Rio Guaporé, Matto Grosso (& imm., July 19, 1826. J. Natterer) I.

6 FIELD MUSEUM OF NATURAL HISTORY-ZOOLOGY, VOL. XIII.

Piprites chloris bolivianus Chapman, Amer. Mus. Novit., 138, p. 6, 1924—Mission San Antonio, Río Chimoré, Bolivia.

Piprites chlorion (not of Cabanis) Pelzeln, Orn. Bras., 2, p. 126, 1868—part, Engenho do Gama, Matto Grosso and Salto do Girão, upper Rio Madeira (spec. examined); Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 5, 1887—part, Engenho do Gama and Salto do Girão.

Piprites chloris chlorion Hellmayr, Nov. Zool., 17, p. 302, 1910—part, Engenho do Gama and Salto do Girão.

Range: Northern Bolivia (San Antonio, Río Chimoré; Quebrada Onda, Yungas of Cochabamba) and adjacent sections of central Brazil (Salto do Girão, upper Rio Madeira; Engenho do Gama, Rio Guaporé, western Matto Grosso).

*Piprites chloris tschudii (Cabanis). Tschudi's Manakin.

Hemipipo tschudii Cabanis, Journ. Ornith., 22, p. 99, 1874—"central Peru" = Ninabamba, dept. Junin (type in Berlin Museum examined); Taczanowski, P.Z.S.Lond., 1874, p. 539—Peru.

Pipra chloris (not of TEMMINCK) TSCHUDI, Arch. Naturg., 10, (1), p. 271, 1844—Peru; idem, Faun. Peru., Aves, p. 144, 1846—montañas of "northwestern" Peru.

Piprites chloris Sclater, P.Z.S.Lond., 23, p. 152, 1855-Bogotá.

Piprites chlorion (not of Cabanis) Sclater, P.Z.S.Lond., 26, p. 72, 1858—Río Napo; Sclater and Salvin, l.c., 1866, p. 190—Upper Ucayali; idem, l.c., 1873, p. 282—Upper Ucayali, Peru; Pelzeln, Orn. Bras., 2, p. 126, 1868—part, Marabitanas and mouth of the Xié, Rio Negro, and Rio Içanna, Brazil (spec. examined); Taczanowski, P.Z.S.Lond., 1882, p. 22—Huambo and Yurimaguas, Peru; Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 5, pl. 2, fig. 2 ("female"), 1887—part, descr. of female and young, and hab. Peru, Ecuador, Bogotá, Marabitanas and Rio Içanna.

Piprites tschudii Taczanowski, Orn. Pér., 2, p. 334, 1884—Huambo, Yurimaguas, upper Ucayali, and Ninabamba, Peru; Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 7, pl. 3, fig. 1, 1887—Peru (descr. and fig. of type discolored by preservation in alcohol); Sclater, Cat. B. Brit. Mus., 14, p. 284, 1888—Bogotá, Sarayacu, Río Napo; Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 367—La Gloria and La Merced, dept. Junín, Peru.

Pipriles chloris tschudii HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 13, 1910—Peru, Ecuador, Colombia, and upper Rio Negro, Brazil; CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 534, 1926—Zamora, Río Suno, and below San José, Ecuador.

Range: Upper Amazonia, from the eastern slopes of the Eastern Andes in Colombia south through eastern Ecuador to central Peru (dept. Junín), east to northwestern Brazil (upper Rio Negro).

1: Colombia (Bogotá 1).

¹Birds from Peru (La Gloria, La Merced) have the tips to the median upper wing coverts paler, so as to suggest a second light wing bar. On the upper Rio Negro this form passes gradually into P. c. chlorion. A couple from Marabitanas

Piprites chloris antioquiae Chapman. Chapman's Greenish Mana-

Piprites chloris antioquiae CHAPMAN, Amer. Mus. Novit., 138, p. 6, 1924-La Frijolera, lower Cauca, Antioquia, Colombia.

Piprites tschudi (not Hemipipo tschudii Cabanis) CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 483, 1917-La Frijolera.

Range: Tropical Zone of the lower Cauca, state of Antioquia, northern Colombia.

*Piprites griseiceps Salvin.2 GRAY-HEADED MANAKIN.

Piprites griseiceps Salvin, P.Z.S.Lond., "1864," p. 583, pub. April, 1865-Tucurriquí, Costa Rica; LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 9, p. 116, 1868-Tucurriquí; Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 9, pl. 3, fig. 2, 1887—Tucurriquí; SCLATER, Cat. B. Brit. Mus., 14, p. 285, 1888-Tucurriquí; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 107, pl. 41, fig. 3, 1890-Tucurriquí; SALVIN, Bull. Brit. Orn. Cl., 1, p. XXXII, 1893-San Carlos, Nicaragua; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, 768, 1907—Costa Rica (Tucurriquí, Jiménez, Reventazón) and Nicaragua (San Carlos); BANGS, Proc. Biol. Soc. Wash., 22, p. 32, 1909-La Vijagua, Costa Rica; CARRIKER, Ann. Carnegie Mus., 6, p. 676, 1910-Reventazón, La Vijagua, El Hogar, and Miravelles, Costa Rica: HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 14, 1910-Costa Rica and Nicaragua.

Range: Costa Rica (chiefly on the Caribbean slope) and Nicaragua (San Carlos).

1: Costa Rica (El Hogar 1).

and a female from the mouth of the Rio Xié closely match Ecuadorian examples, being just a little paler yellow below, with less greenish suffusion across the chest. The Marabitanas male has the whitish tips to the rectrices fully as wide, and the median wing coverts as distinctly marked with yellowish, as in birds from Peru; while the female, in coloration of tail, resembles chlorion of Guiana. A male from the Rio Içanna [=Rio Isana], in coloration of under parts, is exactly intermediate between *chlorion* and *tschudii*; and except for its larger bill it can hardly be disbetween theorem and tstaudi; and except for its larger bill t can hardly be distinguished from P. c. bolivianus. Finally, another male from Marabitanas is gray-breasted like chlorion and apparently is not separable from Guianan examples. The type of H. tschudii, owing to its preservation in alcohol, has lost most of the greenish and yellow tints of the plumage, thereby misleading the authors of the "Monograph of the Manakins" as to its true characters.

Material examined.—Colombia: "Bogotá" 5.—Ecuador: Sarayacu 2.—Peru: Ninabamba (the type) 1, La Gloria 2, La Merced 1.—Brazil: Marabitanas, Rio Negro 3, Rio Içanna [=Rio Isana] 1, mouth of the Rio Xié 1.

¹Piprites chloris antioquiae CHAPMAN: "Similar to P. c. tschudii, but upper parts brighter green, nape with less gray; under parts brighter, clearer yellow, less suffused with olive." (CHAPMAN, l.c.).

We are not acquainted with this race, based on a single male from La Frijolera in the lower Cauca region.

²Piprites griseiceps Salvin differs from its allies by reason of slate gray top and sides of the head, without any yellow on forehead and lores; white instead of yellow orbital ring; and by having the greater upper wing coverts narrowly margined with olive-green like the back, instead of broadly tipped with yellowish white, besides several minor differences. Wing (one adult male) 65; tail 46.

Genus PIPRA Linnaeus

- Pipra Linnaeus, Mus. Adolph. Frid., 2, Prodr., p. 32, 1764—type by subs. desig. (Gray, List Gen. Birds, p. 33, 1840) Parus aureola LINNAEUS.

Pipra flavicollis (not of Sclater) Sclater and Salvin, P.Z.S.Lond., 1867, p. 579—part, Mexiana.

Pipra aureola aureola Hellmayr in Wytsman, Gen. Av., Part 9, p. 6, pl. 2, fig. 7, 1910—part, Cayenne, Surinam, British Guiana, Venezuela, "Pará" and "Barra do Rio Negro"; idem, Nov. Zool., 17, p. 304, 1910—part (excl. Santarém); idem, Abhandl. Bayr. Ak. Wiss., Math-phys. Kl., 26, No. 2, p. 90, 1912—"Rio Mojú"; l.c., p. 111, 1912—Fazenda Nazareth, Mexiana; Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 248, 1916—Las Barrancas, Orinoco delta; Beebe, Trop. Wild Life, 1, p. 134, 1917—Bartica Grove; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 72, 1918—Paramaribo, Surinam.

Range: French, Dutch, and British Guiana; northeastern Venezuela (Orinoco delta; El Pilar, near Carúpano, Sucre); and extreme northeastern Brazil, north of the Amazon, as far west as the Rio Maecurú, supposedly also on the Rio Negro.¹

9: French Guiana (Cayenne 5); Dutch Guiana (vicinity of Paramaribo 1); British Guiana (Hyde Park, Demerara River 1); Brazil (Rio Maecurú 2).

Pipra aureola aurantiicollis Todd.2 Orange-throated Manakin.

Pipra aureola aurantiicollis Todd, Proc. Biol. Soc. Wash., 38, p. 96, 1925—Santarém (type examined).

¹Birds from the islands in the delta of the Amazon (Marajó, Mexiana) and from near Monte Alegre (on the north bank of that river) agree in every respect with a large series from Guiana. Three adult males from an unspecified locality on the "Rio Negro"—erroneously stated to be from Manáos in Nov. Zool., 17, p. 304, 1910, and in WYTSMAN, Gen. Av., Part 9, p. 6, 1910—merely differ by having a darker red breast and less orange about forehead and throat; they are very different from P. a. flavicollis, originally described from Barra do Rio Negro [= Manáos], of which I have seen a series from Obidos, about one hundred miles west of Monte Alegre. If really from the Rio Negro, they probably came from the upper stretches of that river where quite a number of Guianan species are known to occur.

No reliable record exists for Trinidad, sometimes included in the habitat of the Orange-headed Manakin, although there is in the Paris Museum a male said to have been sent from that island by Robin in 1816.

Material examined.—French Guiana: Cayenne 15, Roche-Marie 2, Approuague 2, Mana 5.—Dutch Guiana: vicinity of Paramaribo 10.—British Guiana: Demerara River 4.—Venezuela: Guanoco, Orinoco delta 1; El Pilar, Sucre 1.—Brazil: São Natal, Marajo 2; Palhetá, Marajó 2; Fazenda Nazareth, Mexiana 11; Monte Alegre 2; Rio Maecurú 2; "Rio Negro" 3.

²Pipra aureola aurantiicollis Todd: Similar in the male sex to P. a. aureola, but throat cadmium yellow with merely a few orange chrome tips (instead of orange, most of the feathers largely tipped with flame scarlet); cheeks and auric-

Pipra aureola (not of LINNAEUS) PELZELN, Orn. Bras., 2, p. 126, 1868—part, Santarém (spec. examined); HELLMAYR, Ibis, 1906, p. 6—part, Santarém; IHERING and IHERING, Cat. Faun. Braz., 1, p. 298, 1907—part, Santarém; SNETHLAGE, Journ. Orn., 55, p. 524, 1907—Cussary; idem, Bol. Mus. Goeldi, 8, p. 363, 1914—part, Cussary and Tamucury, south bank of lower Amazon.

Pipra aureola aureola HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 6, 1910—part, Santarém; idem, Nov. Zool., 17, p. 304, 1910—part, Santarém.

Pipra aureola flaviceps (lapsu) RIKER and CHAPMAN, Auk, 8, p. 24, 1891—Santarém.

Range: Northern Brazil, on the south bank of the lower Amazon (Santarém; Cussary; Tamucury).

*Pipra aureola flavicollis Sclater.1 YELLOW-THROATED MANAKIN.

Pipra flavicollis Sclater, Contrib. Ornith., 1851, p. 143—Barra do Rio Negro [= Manáos], Brazil '(type in British Museum examined); Sclater and Salvin, P.Z.S.Lond., 1867, p. 579—part, north side of the Amazon; Sclater, Cat. B. Brit. Mus., 14, p. 294, 1888—Barra do Rio Negro.

ulars less suffused with scarlet; scarlet pectoral area less "solid," with more of the yellowish basal portion of the feathers showing through. Wing (adult male) 60-64; tail 28-31; bill 8 ½-10.

While somewhat inclined toward P. a. flavicollis, the present form may be separated from it by generally darker, more orange forehead and by the decidedly deeper (more orange) yellow of the throat not being abruptly defined against the red of the chest. Fifteen males from Santarém in the collection of the Carnegie Museum are fairly uniform, although one or two approach the allied races in certain respects. The majority resemble aureola in coloration of tail, the lateral rectrices having no white at all or merely a narrow streak along the shaft. Two specimens, however, show a distinct white subbasal band across the inner web of the outermost rectrix; and another in the Vienna Museum has the outermost pair banded on both webs, and the two succeeding ones marked with a white spot at the base of the inner web, thus closely resembling the pattern of Peruvian examples of P. fasciicauda purusiana.

This form is known to me only from Santarém, but I do not doubt that the examples recorded by Madame Snethlage from the south bank of the lower Amazon (Cussary, Tamucury) will prove to be referable to the same race.

Material examined.—Brazil: Santarém 20.

¹Pipra aureola flavicollis SCLATER: Nearly allied to P. a. aurantiicollis, but adult male with throat and foreneck lighter yellow (varying from light cadmium to cadmium yellow), abruptly contrasted with scarlet of breast; frontal band lighter cadmium yellow and more strongly defined; lores and sides of head likewise clearer cadmium yellow, with but little scarlet suffusion on the upper portion of the auriculars. Wing 62-64; tail 27-30.

The range of this well-marked race is rather peculiar. It replaces *P. a. aureola* in western Lower Amazonia, extending on the north bank of the Amazon as far east as Obidos, but it is also found along both sides of the Rio Madeira. Males from the last-named river, as a rule, have the yellow forehead more extensive and the auriculars less suffused with scarlet, though the divergency is insignificant. In the light of the material secured by S. M. Klages at Obidos, it appears that the type locality Manáos, which had been questioned by both Sclater and myself, was, after all, correct.

Material examined.—Brazil: Manáos (the type) 2; Itacoatiará 2; Obidos 5; islands at Obidos 4; Rio Madeira, Borba 2, Marmellos 1, Humaythá 11.

Pipra aureola (not of Linnaeus) Pelzeln, Orn. Bras., 2, p. 126, 1868—part, Borba, Rio Madeira (spec. examined); Snethlage, Bol. Mus. Goeldi, 8, p. 363, 1914—part, Obidos and Rio Jamundá (Faro).

Pipra aureola flavicollis Hellmayr, Ibis, 1906, p. 8—Barra and Borba (monog.); idem, Nov. Zool., 14, p. 358, 1907—Humaythá, Rio Madeira; idem, l.c., 17, pp. 303, 305, 1910—Marmellos, Rio Madeira (crit., range); idem in Wytsman, Gen. Av., Part 9, p. 7, 1910—west bank of the Rio Madeira.

Range: Northern Brazil, on the north bank of the lower Amazon (from Obidos to Manáos) and on the Rio Madeira (Borba, right bank; Marmellos and Humaythá, left bank).

2: Brazil (Itacoatiará 2).

*Pipra fasciicauda fasciicauda Hellmayr. BANDED-TAILED MANAKIN.

Pipra fasciata (not of Thunberg, 1822)¹ Lafresnaye and d'Orbigny, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 38, 1837—Yuracares, Bolivia (type in Paris Museum examined); idem, Voyage Amér. Mérid., Ois., p. 295, pl. 30, fig. 1, 1839—Santa Cruz and Guarayos, Bolivia; Sclater and Salvin, P.Z.S. Lond., 1879, p. 616—Bolivia (ex d'Orbigny); Sclater, Cat. B. Brit. Mus., 14, p. 294, 1888—part, Bolivia; Allen, Bull. Amer. Mus. N.H., 2, p. 87, 1889—Falls of the Río Madeira, Bolivia.

Pipra fasciicauda fasciicauda HELLMAYR, Nov. Zool., 15, p. 54, 1908—range in part, eastern Bolivia; idem in WYTSMAN, Gen. Av., Part 9, p. 7, 1910—part, Bolivia.

Pipra aureola fasciicauda Hellmayr, Nov. Zool., 17, p. 305, 1910—part, eastern Bolivia; idem, Verh. Orn. Ges. Bay., 12, p. 123, 1915—eastern Bolivia and extreme southeastern Peru (Yahuarmayo, Carabaya); idem, Arch. Naturg., 85, A, Heft 10, p. 61, 1920—Yahuarmayo, Carabaya, Peru; idem, Nov. Zool., 32, p. 12, 1925—Bolivia (note on type).

Range: Eastern Bolivia (Santa Cruz; Buenavista; Guarayos; Río San Mateo; falls of the Río Madeira) and extreme southeastern Peru (Yahuarmayo, north slope of Sierra de Carabaya).²

2: Bolivia (Buenavista, dept. Santa Cruz 2).

*Pipra fasciicauda scarlatina Hellmayr.3 Scarlet Manakin.

Pipra aureola scarlatina Hellmayr, Verh. Orn. Ges. Bay., 12, p. 122, 1915—Fazenda Cayoá, Salto Grande do Rio Paranapanema, São Paulo, Brazil.

¹See Field Mus. Nat. Hist. Pub., Zool. Ser., 13, Part 5, p. 465, 1927.

²Material examined.—Bolivia: Guarayos (including the type) 2; Río San Mateo 3; Santa Cruz 1; Buenavista 2.—Peru: Yahuarmayo, Carabaya 3.

²Pipra fasciicauda scarlatina Hellmayr: Similar to P. f. fasciicauda in tail markings (viz., all of the rectrices with a continuous yellowish-white band across

Pipra fasciata (not of Lafresnaye and d'Orbigny) Sclater and Salvin, P.Z.S. Lond., 1867, p. 579—Rio Tocantins; Pelzeln, Orn. Bras., 2, p. 127, 1868—Rio Paraná (São Paulo), Goyaz, Villa Maria, Engenho do Gama, Rio Guaporé, [Villa Bella de] Matto Grosso, and São Vicente, Matto Grosso (spec. examined); Reinhardt, Vidensk. Medd. Naturhist. Foren., 1870, p. 321—Lagôa Dourada and near Lagôa Santa, Minas Geraes; Sclater, Cat. B. Brit. Mus., 14, p. 294, 1888—part, spec. b-d, Matto Grosso, Engenho do Gama, and Rio Paraná; Allen, Bull. Amer. Mus. N. H., 5, p. 109, 1893—Chapada, Matto Grosso; Ihering and Ihering, Cat. Faun. Braz., 1, p. 298, 1907—Piracicaba, Salto Grande do Rio Paranapanema, Avanhandava, Itapura, and Bebedouro, São Paulo.

Pipra fasciicauda Hellmayr, Ibis, 1906, p. 9—part, descr. and hab. part, Brazilian localities; Bertoni, Seg. Contrib. Ornit. Parag. in Rev. Inst. Parag., 1907, p. 5—Paraguay; Hellmayr, Nov. Zool., 14, p. 12 1907—Itaituba, Rio Tapajóz; Snethlage, Journ. Orn., 56, p. 528, 1908—Arumatheua, Rio Tocantins; Chubb, Ibis, 1910, p. 600—Sapucay, Paraguay; Snethlage, Journ. Orn., 61, p. 525, 1913—Tapajóz, Jamauchim, Curuá and Tocantins rivers; idem, Bol. Mus. Goeldi, 8, p. 364—Ilha Pirunum and Arumatheua, Rio Tocantins; (?) Beebe, Zoologica (N.Y), 2, p. 90, 1916—Utinga, near Pará; Bertoni, El Hornero, 1, p. 257, 1919—Puerto Bertoni, Paraguay.

Pipra fasciicauda fasciicauda Hellmayr, Nov. Zool., 15, p. 54, 1908—Fazenda Esperança, Goyaz; idem in Wytsman, Gen. Av., Part 9, p. 7, 1910—part, central Brazil and Lower Amazonia.

Pipra aureola fasciicauda Hellmayr, Nov. Zool., 17, p. 303, 1910—Maroins, Rio Machados; idem, l.c., p. 305, 1910—part, Brazilian localities; idem, Verh. Orn. Ges. Bay., 12, p. 123, 1915—synon., range.

Range: Paraguay (Sapucay; Puerto Bertoni) and the interior of Brazil, south to northern São Paulo and western Minas Geraes, west to Matto Grosso and the Rio Machados, north to Lower Amazonia (Rio Tapajóz, Rio Curuá, and Rio Tocantins).

3: Brazil (Chapada, Matto Grosso 3).

both webs); but cheeks, auriculars, and throat largely tipped with scarlet, partly concealing the cadmium yellow ground-color; foreneck and breast much darker, scarlet instead of cadmium orange or orange chrome; the scarlet color, in form of lateral edges, frequently extending down to the lower tail coverts. Female not distinguishable from *P. f. fasciicauda*.

There is obviously no difference between specimens from various localities. Birds from the Tapajóz, including a male from Miritituba, agree with others from Matto Grosso and show not the least tendency in the direction of $P.\ a.\ aurantii-collis$, found at Santarém; and as the ranges of $P.\ a.\ flavicollis$ and $P.\ f.\ calamae$ closely approach each other on the Rio Madeira, without evidence of intergradation, it is perhaps safer for the present to treat $P.\ fasciicauda$ as specifically distinct.

Material examined.—São Paulo: Fazenda Cayoá, Salto Grande do Rio Paranapanema 7, Rio Paraná 3.—Minas Geraes: Rio Jordão, near Araguary 4.—Matto Grosso: Engenho do Gama 3, Villa Maria 3, Villa Bella de Matto Grosso 3, Chapada 7.—Goyaz: Goyaz City 2, Fazenda Esperança 2.—Amazonas: Maroins, Rio Machados 2; Rio Tapajóz, Itaituba 2, Villa Braga 3, Miritituba 1.

Pipra fasciicauda purusiana Snethlage. Purús Manakin.

Pipra fasciicauda purusiana SNETHLAGE, Ornith. Monatsber., 15, p. 160, 1907—Ponto Alegre, Rio Purús, Brazil; idem, Journ. Orn., 56, p. 12, 1908—Bom Lugar, Ponto Alegre, Monte Verde, Rio Purús; idem, Bol. Mus. Goeldi, 8, p. 364, 1914—same localities; Hellmayr, Nov. Zool., 15, p. 54, 1908—crit., range; idem in Wytsman, Gen. Av., Part 9, p. 7, 1910—western Brazil to eastern Peru.

Pipra fasciata (not of LAFRESNAYE and D'ORBIGNY) SCLATER and SALVIN, P.Z.S. Lond., 1873, p. 282—Río Ucayali, Peru (spec. examined); SCLATER, Cat. B. Brit. Mus., 14, p. 294, 1888—part, spec. e,f, upper Ucayali, Peru.

Pipra fasciicauda HELLMAYR, Ibis, 1906, p. 9—part, Ucayali and Chuchurras (Huánuco), Peru.

Pipra aureola purusiana HELLMAYR, Nov. Zool., 17, p. 306, 1910—Rio Purús and eastern Peru (crit.).

Range: Western Brazil, banks of the upper Rio Purús, west to eastern Peru (Río Ucayali; Chuchurras, Río Palcazú, dept. Huánuco).

Pipra fasciicauda calamae Hellmayr.2 CALAMA MANAKIN.

Pipra aureola calamae HELLMAYR, Nov. Zool., 17, pp. 303, 306, 1910—Calama, Rio Madeira, Brazil.

Range: Central Brazil, on the right bank of the upper Rio Madeira (Calama, Allianca, Santa Izabel).

Pipra anomala Todd.3 Anomalous Manakin.

Pipra anomala Todd, Proc. Biol. Soc. Wash., 38, p. 97, 1925—Santarém, Rio Tapajóz, Brazil (type in Carnegie Museum examined).

¹Pipra fasciicauda purusiana SNETHLAGE: Adult male similar to P. f. fasciicauda, but central rectrices uniform black, and black tips to under tail coverts much more extensive; throat and foreneck cadmium orange as in P. f. fasciicauda, from which the female is indistinguishable. Wing (adult male) 63-65; tail 26-30.

In specimens from the Rio Purús two or four of the median rectrices are entirely black, and the two or three external pairs are banded with yellowish on both webs, while the intervening ones have a white patch near the base of the inner vane. In Peruvian skins the six median rectrices are devoid of white.

Material examined.—Brazil, Rio Purús: Monte Verde 3, Ponto Alegre (the type) 1, Bom Lugar 1.—Peru: Río Ucayali 1; unspecified 1; Chuchurras, dept. Huánuco 4.

²Pipra fasciicauda calamae Hellmayr: Similar in the male sex to P. f. purusiana, and agreeing with topotypical Brazilian examples in tail markings; but the entire fore part of the crown is cadmium yellow; breast deeper crimson; flanks strongly washed with olive; abdomen and basal portion of under tail coverts suffused with crimson. Wing (male) 64-65; tail 27-28.

Material examined.—Brazil: Calama 6, Allianca 2, Santa Izabel, Rio Preto 2.

³Pipra anomala Todd: Pileum and nape deep orange chrome; back dark olive green, most of the feathers apically edged with sooty black, more broadly so on the mantle; wing coverts, wings, and tail dusky black, exteriorly edged with olive green; lores pale yellow, tipped with blackish; circumocular region and auriculars black, forming a large dark patch on the sides of the head; throat

14 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Range: Northern Brazil, in state of Pará (Santarém, Rio Tapajóz).

*Pipra isidorei isidorei Sclater. ISIDOR'S MANAKIN.

Pipra isidorei Sclater, Rev. Mag. Zool., (2), 4, p. 9, 1852—"Nouvelle Grenade" =Bogotá (type in Paris Museum examined); idem, Contrib. Ornith., 1852, p. 132, pl. 100, fig. 1—Bogotá; Berlioz, Bull. Mus. Hist. Nat. Paris, 34, p. 72, 1928—San José, Ecuador.

Pipra isadorei isadorei Chapman, Bull. Amer. Mus. N.H., 36, p. 481, 1917—Buenavista, eastern Colombia; idem, l.c., 55, p. 531, 1926—Zamora and below San José, Ecuador.

Range: Tropical Zone of eastern Ecuador and of the eastern slope of the Eastern Andes of Colombia.¹

2: Colombia (Bogotá 1); Ecuador (Napo region 1).

*Pipra isidorei leucopygia Hellmayr.2 WHITE-RUMPED MANAKIN.

Pipra isidorei leucopygia Hellmayr, Verh. Zool. Bot. Ges. Wien, 53, p. 200, 1903—Huambo, Peru; idem, Ibis, 1906, p. 29—northern Peru (monog.); idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—Huayabamba Valley, Peru; Ménégaux, Rev. Franç. d'Orn., 2, p. 8, 1911—Nuevo Loreto, east of Tayabamba, Peru.

light orange yellow, deeper on chin and malar region, continuous with a narrow streak of dull orange along the sides of the neck connecting with the orange of the nape; breast washed with cadmium orange, forming a brightly colored zone, fading into the maize yellow of the abdomen; flanks washed with olive grayish; under tail coverts sooty black, basally white and edged with yellowish; under wing coverts very pale buffy grayish; bill black. Wing (male) 74; tail 40; bill 12.

The type (and only known specimen), by the coloration of the under parts, somewhat resembles *P. fasciicauda*; but the much larger bill and greater dimensions, together with the black sides of the head, distinguish it at a glance from that group of Manakins. The coloring of the upper parts is very peculiar, too, and while the type may be not quite mature, I have little doubt of its specific distinctness.

¹Specimens from Ecuador agree with Bogotá skins.

Material examined.—Colombia: Bogotá 25.—Ecuador: Baeza 2, Napo region 2, Sarayacu 3.

²Pipra isidorei leucopygia HELLMAYR: Adult male similar to P. i. isidorei, but rump for the greater part milky white like the cap, instead of light Amparo blue; female with rump slightly more yellowish green. Wing (male) 48-50; tail 20-21.

Material examined.—Peru: Huambo (including the type) 3; Huayabamba 1; Moyobamba 3; Nuevo Loreto 2.

Pipra isidori (not of SCLATER) TACZANOWSKI, P.Z.S.Lond., 1882, p. 23—Huambo; idem, Orn. Pér., 2, p. 342, 1884—Huambo.

Range: Tropical zone of northern Peru (Huambo; Huayabamba; Moyobamba; Nuevo Loreto, east of Tayabamba, dept. Libertad).

4: Peru (Moyobamba 3; Nuevo Loreto 1).

*Pipra coronata velutina Berlepach. VELVETY MANAKIN.

Pipra velutina Berlepsch, Ibis, (5), I, p. 492, 1883—Veragua; Sclater, Cat. B. Brit. Mus., I4, p. 299, 1888—part, spec. a-c, Bugaba, Chiriquí, and Veragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 110, 1890—part, Bugaba, Chiriquí, Santiago de Veraguas; Cherrie, Proc. U.S.Nat. Mus., I4, p. 535, 1891—Pozo Azul, Costa Rica (crit., descr. of female); idem, Anal. Inst. Fis.-Geog. Nac. Costa Rica, 6, p. 72, 1893—Río Naranjo, Costa Rica; Bangs, Auk, 18, p. 364, 1901—Divala, Panama; Hellmayr, Ibis, 1906, p. 30—part, Costa Rica, Chiriquí, and Veragua; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 750, 1907—part, southwestern Costa Rica and western Panama (Divala, Santa Fé de Veragua, Bugaba, Volcán de Chiriquí); Bangs, Auk, 24, p. 303, 1907—Boruca, Paso Real, and El Pozo de Térraba, Costa Rica; Carriker, Ann. Carnegie Mus., 6, p. 681, 1910—Buenos Aires, El General, Pozo Azul de Pirris, El Pozo de Térraba, and Boruca, southwestern Costa Rica (habits).

Pipra cyaneocapilla (not of Hahn) Salvin, P. Z.S.Lond., 1867, p. 149—Santiago de Veragua; idem, l.c., 1870, p. 200—Bugaba and Volcán de Chiriquí, Panama.

Pipra coronata velutina HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—part, Costa Rica, Chiriquí, Veragua.

Range: Extreme southwestern Costa Rica and western Panama (Chiriquí and Veraguas).¹

8: Costa Rica (Térraba 1, Boruca 4, Buenos Aires 1, Lagarto 1); Panama (Chiriquí 1).

*Pipra coronata minuscula Todd.² Short-winged Velvety Manakin.

¹Birds from Bugaba, Chiriquí agree in size and coloration with a Costa Rican series. I have not seen any material from Veraguas, the type locality, but according to Berlepsch's measurements (wing 61; tail 27), specimens from this province appear to be referable to the northern larger race.

Material examined.—Costa Rica 21.—Panama (Chiriquí, Bugaba, Divala) 14.

²Pipra coronata minuscula TODD: Very similar to P. c. velutina, but wings and tail shorter; bill decidedly smaller; plumage in adult males deeper black, and crown a shade darker blue. Wing (male) 55-58, (female) 54½-57; tail 24½-27; bill 7-8.

Birds from the Panama Railroad average slightly larger (wing 58-59½; tail 26½-28), but have the small bill and deep coloration of South American specimens.

Material examined.—Panama: Lion Hill (adult males) 3.—Colombia: Alto Bonito I, Remedios I, Nóvita 6, Sipi 6, Juntas de Tamaná I, Noanamá 3, Río Cajón I, San Joaquín [= Buenaventura] I.—Ecuador: Cachaví 3, San Javier 7.

- Pipra velutina (not of Berlepsch) Sclater, Cat. B. Brit. Mus., 14, p. 299, 1888—part, spec. d-i, Panama, Lion Hill, Remedios; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 110, 1890—part, Lion Hill, Panama, and Colombia; Hartert, Nov. Zool., 5, p. 488, 1898—Cachaví, Ecuador; Hellmayr, Ibis, 1906, p. 30—part, Panama, western Colombia, and northwestern Ecuador (crit.); Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 750, 1907—part, Panama (Lion Hill), western Colombia, and northwestern Ecuador; Chapman, Bull Amer. Mus. N.H., 36, p. 381, 1917—Alto Bonito, Bagado, Andagueda, Juntas de Tamaná, Nóvita, Noanamá, San José, Buenaventura, Barbacoas, and Puerto Valdivia, Colombia; Stone, Proc. Ac. Nat. Sci. Phila., 70, p. 268, 1918—Gatún, Panama.
- Pipra coronata velutina Hellmayr in Wytsman, Gen. Av., Part 9, p. 8, 1910
 —part, Panama, western Colombia and northwestern Ecuador; idem,
 P.Z.S.Lond., 1911, p. 1140—Nóvita, Sipi, Noanamá, Río Cajón, and San
 Joaquín [=Buenaventura], Pacific Colombia.

Range: Eastern Panama, from the Panama Railroad eastwards; western Colombia (Pacific coast, extending east to the lower Cauca and Río Nechí, Antioquia), and northwestern Ecuador (prov. Esmeraldas).

2: Colombia (Alto Bonito, Río Sucio 1; Noanamá, Río San Juan 1).

Pipra coronata carbonata Todd. COAL-BLACK MANAKIN.

Pipra carbonata Todd, Proc. Biol. Soc. Wash., 38, p. 98, 1925—Tonantins, north bank of Rio Solimões, Brazil (type in Carnegie Museum examined).

¹Pipra coronata carbonata Todd: Most nearly allied to P. c. coronata, from the south bank of the Rio Solimões, but adult males much deeper (velvety) black; under parts entirely uniform, the abdomen not paler than the breast; under tail coverts as a rule more grayish olive, less yellowish; cap on average darker, about salvia blue. Wing 58-61; tail 29-32; bill 8-9.

The excellent material secured by S. M. Klages for the Carnegie Museum proves beyond doubt that the black blue-capped Manakins from north of the Solimões, heretofore united with P. c. coronata, are easily distinguishable by their blacker coloration. In this respect, P. c. carbonata approaches P. c. minuscula, but differs on account of the purplish blue rump, much narrower black frontal band, and paler under tail coverts. The under parts are almost uniform velvety black, while in typical coronata the abdomen is decidedly duller, more sooty than

Pipra cyaneocapilla (not of Hahn?)¹ Sclater and Salvin, P.Z.S.Lond., 1866, p. 190—"Upper Ucayali," errore² (spec. in British Museum examined); idem, l.c., 1867, p. 580—upper Rio Negro; idem, l.c., 1867, p. 978—Pebas, Río Marañón, Peru (spec. in British Museum examined); idem,l.c., 1873, p. 283—part, Pebas and "Upper Ucayali"; Pelzeln, Orn, Bras., 2, p. 128, 1868—São Pedro, Cocuy, Marabitanas, and Rio Içanna, upper Rio Negro (spec. examined); Taczanowski, Orn. Pér., 2, p. 343, 1884—part, Pebas and Loretoyacu, Peru; Sclater, Cat. B. Brit. Mus., 14, p. 299, 1888—part, spec. a,b,g,h,j-n, Sarayacu, "Upper Ucayali," Pebas, Peruvian Amazon, Río Napo, Ecuador; Allen, Bull. Amer. Mus. N.H., 2, p. 72, 1889—Río Napo.

Pipra cyanocapilla Salvadori and Festa, Bull Mus. Zool. Torino, 14, No. 362, p. 14, 1899—Río Santiago, Ecuador.

Pipra coronata (not of SPIX) SCLATER, P.Z.S.Lond., 22, p. 114, 1854—Quijos, Río Napo; Hellmayr, Ibis, 1906, p. 32—part, descr. and hab. Rio Negro, northeastern Peru, and eastern Ecuador; Chapman, Bull. Amer. Mus. N.H., 36, p. 482, 1917—Florencia and La Morelia, Caquetá, Colombia; idem, l.c., 55, p. 532, 1926—Río Suno and below San José, Ecuador; Berlioz, Bull. Mus. Hist. Nat. Paris, 34, p. 72, 1928—Río Suno and San José, Ecuador.

Pipra coronata coronata HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—part, Ecuador, Peru, and Rio Negro.

Range: Upper Amazonia, from the north bank of the Rios Solimões (Tonantins, Manacapurú) and Marañón (Nauta, Pebas, Loretoyacu) north through eastern Ecuador to southeastern Colombia (Caquetá region), east to the upper Rio Negro in northwestern Brazil.

the breast. From P. c. hoffmannsi the north Amazon form may be told, in addition to its blacker coloring, by the absence of the olivaceous tinge on the lower belly, purplish instead of verditer blue rump, and by lacking the greenish edges to the wings.

Adult males from the north bank of the Marañón (Pebas, Nauta), eastern Ecuador, and the Caquetá region in Colombia agree with the Tonantins series. Three from the upper Rio Negro, although somewhat faded through age, appear to belong to the same race. Two (out of three) males from Manacapurú, farther east on the Solimões, by reason of a faint olivaceous tinge on the abdomen and a dusky blue wash across the chest, slightly diverge in the direction of P. c. hoff-mannsi.

Material examined.—Brazil, Rio Solimões: Tonantins 8, Manacapurú 3; Marabitanas, Rio Negro 3; Rio Içanna [=Rio Isana] 4.—Peru: Nauta 3, Río Tigre 1, Yahuas Territory, near Pebas 1, Pebas 1.—Ecuador: San José 4, Río Napo 8.—Colombia, Caquetá: La Morelia 3, Florencia 4.

¹Pipra cyanocapilla Hahn (Vögel aus Asien, etc., Lief. 15, pl. 3, fig. 2, 1826—Brazil) may have been based on a specimen of the present form. Considering the similarity of the three races found on the banks of the Solimões and in the absence of a more definite locality than "Brazil", it seems best to drop the name altogether as ambiguous. The whereabouts of the type purchased from a dealer and formerly in the describer's private collection is unknown.

²The specimen which has no original label is no doubt incorrectly marked "Upper Ucayali." No black form of this group has been found on the Ucayali, where one of the green-plumaged races is more likely to occur.

Pipra coronata coronata Spix. Blue-CAPPED MANAKIN.

Pipra coronata Spix, Av. Bras., 2, p. 5, pl. 7, fig. 1, 1825—São Paulo de Olivença, Rio Solimões, Brazil (types in Munich Museum examined); (?) Sclater, P.Z.S.Lond., 25, p. 265, 1857—Rio Javarri; Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 640, 1906—note on type; idem, Ibis, 1906, p. 32—part, São Paulo de Olivença and (?) Rio Javarri; Ihering and Ihering, Cat. Faun. Braz., 1, p. 299, 1907—part, Rio Juruá (spec. examined).

(?) Pipra cyaneocapilla (not of HAHN) SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 283—part, Rio Javarri; (?) TACZANOWSKI, Orn. Pér., 2, p. 343, 1884—part, Rio Javarri; IHERING, Rev. Mus. Paul., 6, p. 435, 1905—part, Rio Juruá (spec. in Museu Paulista examined).

Pipra coronata coronata HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—part, São Paulo de Olivença and Rio Juruá.

Pipra herbacea SPIX, Av. Bras., 2, p. 6, pl. 8a, fig. 1, 1825—"in sylvis flum. Amazonum" (type in Munich Museum examined; =female); Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 640, 1906 (crit.).

Range: Extreme northwestern Brazil, from the south bank of the Rio Solimões (São Paulo de Olivença) south to São Felippe, on the upper Rio Juruá, and (?) west to the Javari.

Pipra coronata hoffmannsi Hellmayr.2 Hoffmanns's Manakin.

Pipra hoffmannsi Hellmayr, Nov. Zool., 14, p. 49, 1907—Teffé, Rio Solimões, Brazil; idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—Teffé.

¹The adult male of *P. c. coronata* has the upper parts markedly duller, more of a brownish black than either *P. c. carbonata* or *P. c. hoffmannsi*; the color of the abdomen is intermediate between the two, being neither deep velvety black like the breast as in the former, nor dingy olive greenish as in the latter, but dull sooty, distinctly paler than the anterior under parts. Immature males closely approach *P. c. hoffmannsi*.

A single male obtained by E. Garbe at São Felippe, on the upper stretches of the Rio Juruá, on December 16, 1901 (Museu Paulista, No. 2260), is perfectly identical with examples from São Paulo de Olivença in the Carnegie Museum, which were directly compared with the types in the Munich Museum. The type of *P. herbacea* is evidently a female of the same form, and we formally suggest São Paulo de Olivença as its type locality, in order to finally dispose of that name.

The westward extension of its range cannot be traced with certainty, owing to lack of material from the country between the Juruá and Ucayali, and it remains to be ascertained where the green and black forms meet in eastern Peru.

Material examined.—Brazil: São Paulo de Olivença (including the types) 11; São Felippe, Rio Juruá 1.

²Pipra coronata hoffmannsi Hellmayr. Adult male nearest to P. c. coronata, but cap shorter and darker blue; back, sides of the head, and throat deeper (velvety) black; rump washed with verditer blue instead of with purplish; greater upper wing coverts, quills, and rectrices distinctly edged with green; middle of breast and abdomen dingy olive yellowish; sides dark green; female more conspicuously yellowish along the abdominal line. Wing 58-61, (female) 55-59; tail 27-30; bill 8-9.

This form apparently replaces P. c. coronata on the south bank of the Solimões east of the Rio Teffé. The dark shade of the blue cap, the distinct green wing-edgings, and the extensive yellowish abdominal line in the original series

Pipra cyaneocapilla (not of Hahn) Sclater, Cat. B. Brit. Mus., 14, p. 299, 1888—part, spec. e, Ega=Teffé.

Range: Northwestern Brazil, on the south bank of the Rio Solimōes, from the Rio Teffé east to Caviana, near the mouth of the Rio Purús.

Pipra coronata chloromelaena Todd. GREEN-BLACK MANAKIN.

Pipra chloromelaena Todd, Proc. Biol. Soc. Wash., 38, p. 97, 1925—Nova Olinda, left bank of lower Purús, Brazil (type in Carnegie Museum examined).

Range: Western Brazil, on the left bank of the lower Rio Purús (Nova Olinda).

Pipra coronata arimensis Todd.² ARIMA MANAKIN.

Pipra chloromelaena arimensis Todd, Proc. Biol. Soc. Wash., 38, p. 98, 1925
—Arimā, right bank of lower Purús, Brazil (type in Carnegie Museum examined).

from Teffé reveal close affinity to *P. c. chloromelaena*, of the lower Purús. Four males from Caviana (opposite Manacapurú), on the other hand, differ by reason of duller black dorsal surface, with more bluish rump and less conspicuous green edges on the wings, somewhat lighter blue cap, and more restricted as well as more olivaceous (less yellowish) abdominal line.

Material examined.—Brazil, Rio Solimões: Teffé 9, Caviana 4.

¹Pipra coronata chloromelaena Todd: Adult male closely similar to P. c. hoffmannsi, but upper back varying from dusky green to greenish slaty black (instead of plain black), passing into Danube green on rump and tail coverts; green edges on wing coverts, quills, and rectrices wider and brighter; throat somewhat duller, more greenish black, shading into dark green on chest; extensive area along middle of breast and abdomen dingy primrose yellow; sides brighter green; female not distinguishable. Wing (male) 59-61; tail 29-31; bill 8-9.

This most interesting form connects the black and green races of the blue-capped group, thus confirming my suspicion that they are all representatives of a single specific unit. The darkest specimens closely approach hoffmannsi, being, however, more tinged with greenish on mantle, sides of the head and throat, while the lower back and tail coverts are decidedly green, instead of being blackish, tinged with verditer or dusky blue. Wings and tail are more broadly margined with brighter green. The cap is about the same tone, salvia blue, with a faint violaceous cast, the bases of the feathers dusky as in P. c. hoffmannsi.

Material examined.—Brazil: Nova Olinda, lower Purús 9.

²Pipra coronata arimensis Todd: Adult male closely similar to P. c. chloromelaena, but cap much paler, light cerulean blue instead of salvia blue, with the bases of the feathers decidedly greenish; back without any black, the anterior portion being Danube green, becoming brighter posteriorly; sides of head and throat dusky green (less blackish); chest brighter, about empire green; middle of belly and under tail coverts brighter, barium yellow rather than primrose yellow. Wing (male) 56-60; tail 27-30; bill 8-9.

Reexamination shows specimens from Humaythá to be identical with the series from Arimã. The darker blue lateral and posterior edge of the cap is but slightly suggested in males of this form. Females are hardly different from P. c. chloromelaena, though the yellowish abdominal area averages a little brighter.

Material examined.—Brazil: Arimā, Rio Purús 15; Humaythá, Rio Madeira 7.

Pipra caelesti-pileata (not of GOELDI) HELLMAYR, Nov. Zool., 14, p. 359, 1907—Humaythá, Rio Madeira; idem, l.c., 17, p. 307, 1910—Humaythá; idem in Wytsman, Gen Av., Part 9, p. 8, 1910—part, Rio Madeira (Humaythá).

Range: Western Brazil, from the right bank of the lower Rio Purús (Arimã) to the left bank of the Rio Madeira (Humaythá).

Pipra coronata caelesti-pileata Goeldi. AZURE-CAPPED MANAKIN.

Pipra caelesti-pileata Goeldi, Compt. Rend. Six. Congr. Internat. Zool. Berne, p. 549, May 25, 1905 or later²—upper Rio Purús = Uby Cachoeira (type examined); Snethlage, Journ. Orn., 56, p. 12, 1908—Cachoeira, Rio Purús; idem, Bol. Mus. Goeldi, 8, p. 366, 1914—Cachoeira; Hellmayr in Wytsman, Gen. Av., Part 9, p. 8, 1910—part, Rio Purús.

Pipra cyaneocapilla (not of HAHN) IHERING, Rev. Mus. Paul., 6, p. 435, 1905—part, "Rio Juruá" = Rio Chiruão (Churuan), Brazil (spec. examined).

Pipra exquisita HELLMAYR, Ibis, p. 35—part, Rio Purús and "Rio Juruá" [=Rio Chiruão].

Pipra coronata (not of SPIX) IHERING and IHERING, Cat. Faun. Braz., 1, p. 299, 1907—"Rio Juruá," part.

Pipra exquisita caelesti-pileata Hellmayr, Arch. Naturg., 85, A, Heft 10, p. 63, 1920—Yahuarmayo, Sierra de Carabaya, Peru (crit.), and "Rio Juruá" [=Rio Chiruão].

Range: Western Brazil, from the Rio Chiruão (Churuan), a southerly tributary of the Juruá, and the upper stretches of the Rio

¹Pipra coronata caelesti-pileata GOELDI: Most nearly related to P. c. arimensis, but cap of adult male less shining and appreciably darker, about light methyl-blue, with more of the greenish bases showing through; upper parts including the edges of wing and tail feathers much brighter and clearer, grass or spinach green; sides of head and throat more greenish (dark cress green); breast brighter, spinach green rather than Danube green; middle of belly and crissum as a rule clearer yellow. Wing (male) 58-62; tail 29-31; bill 8-9.

This form is unquestionably distinct from both *P. c. arimensis* and *P. c. exquisita*, as shown by a very satisfactory series in the Carnegie Museum from Hyutanahán. The cap of the adult males lacks the purplish posterior margin, and is intermediate in tone between the salvia blue of *chloromelaena* and the light cerulean blue of *arimensis*, the bluish tips being, at the same time, shorter and less flattened. The type of *P. caelesti-pileata* has the crown lighter blue than any of the Hyutanahán birds, more like *arimensis*, but this is likely to be individual. Two males from the upper stretches of the Rio Chiruão (Churuan), a southerly tributary of the Juruá, halfway between that river and the Purús, agree well with the average from Hyutanahán. According to information received from their collector, the late Ernesto Garbe, they came from a section of the Juruá region, far away from São Pelippe, where a single male of the black-plumaged *P. c. coronata* was obtained, as recorded under that form. Ihering's and Hellmayr's intimation, that the two races are found together, thus proves to be fallacious.

Birds from southeastern Peru (Yahuarmayo), while pointing to exquisita because of the slightly paler crown, are not otherwise different from Purús specimens.

Material examined.—Brazil, Rio Purús: Uby Cachoeira (the type) 1, Hyutanahán 14; Rio Chiruão (Churuan) 3.—Peru: Yahuarmayo 6.

²Although there is a note on the title-page "sorti de presse le 25 mai 1905," the volume evidently was not issued until October or November of that year.

Purús (Hyutanahán, Uby Cachoeira) south to extreme southeastern Peru (Yahuarmayo, north slope of Sierra de Carabaya, dept. Puno).

*Pipra coronata exquisita Hellmayr.1 Exquisite Manakin.

Pipra exquisita HELLMAYR, Bull. Brit. Orn. Cl., 15, p. 56, March, 1905—Chuchurras, near Pozuzo, dept. Huánuco, Peru; idem, Ibis, 1906, p. 35, pl. 1—part, Chuchurras, Peru; idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—Chuchurras.

Range: Central Peru, in depts. of Junín (Puerto Bermúdez) and Huánuco (Chuchurras).

4: Peru (Puerto Bermúdez, Río Pichis, Ucayali drainage basin, dept. Junín 4).

*Pipra coronata circumpicta Zimmer.² Huallaga Manakin.

Pipra coronota circumpicta ZIMMER, Proc. Biol. Soc. Wash., 42, p. 84, 1929—Munichis, Yurimaguas, Peru.

Pipra cyaneocapilla (not of HAHN) SCLATER and SALVIN, P.Z.S.Lond., 1867, p. 751—Chyavetas; idem, l.c., 1873, p. 283—part, Chyavetas; TACZANOWSKI, Orn. Pér., 2, p. 343, 1884—part, Chyavetas; SCLATER, Cat. B. Brit. Mus., 14, p. 299, 1888—part, spec. f,i, Chyavetas and Río Huallaga (spec. examined).

Pipra exquisita (not of Hellmayr) Hellmayr, Ibis, 1906, p. 35—part, Chyavetas and Río Huallaga.

Range: Northeastern Peru, south of the Marañón (Chyavetas; Yurimaguas, lower Huallaga, dept. Loreto).

1: Peru (Munichis, Yurimaguas 1).

*Pipra caeruleocapilla Tschudi.3 Tschudi's Blue-capped Manakin.

¹Pipra coronata exquisita HELLMAYR: Agreeing with P. c. caelesti-pileata in bright spinach green upper parts and breast, but cap of adult males much paler and more greenish blue (between calamine blue and pale cerulean blue); sides of head and throat lighter cress green (hardly darker than the back), and middle of the belly brighter as well as clearer yellow. Wings (male) 57-60; tail 26-29; bill 8-9.

Males from Puerto Bermúdez are perfectly identical with a cotype from Chu-

churras.

Material examined.—Peru: Chuchurras 4: Puerto Bermúdez 4.

²Pipra coronata circumpicta ZIMMER: Adult male nearest to P. c. exquisita, but crown decidedly deeper, about pale cerulean blue, encircled by a light methyl blue border; middle of abdomen somewhat dingier yellow. Wing 57-60; tail 26-28; bill 8-9.

Material examined.—Peru: Yurimaguas (the type) 1; Chyavetas 1; "Huallaga" 1.

²Pipra caeruleocapilla Tschudi, in its velvety black plumage of the male, resembles P. coronata carbonata, but is immediately distinguished by the light blue uropygial patch and much paler cap. It is possibly a zonal representative of the P. coronata group. The late W. Hoffmanns obtained it at Pozuzo, Río Pozuzo, at elevations of from 800 to 950 meters, while lower down in the same river

22 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Pipra caeruleocapilla¹ TSCHUDI, Arch. Naturg., 10, (1), p. 271, 1844—Peru; idem, Faun. Peru., Aves, p. 145, 1846—Montañas of "northwestern" Peru, we suggest Montañas of Vitoc, dept. Junín; SCLATER, P.Z.S.Lond., 1873, pp. 780, 782—Cosnipata, dept. Cuzco; TACZANOWSKI, l.c., 1874, p. 538—Amable María and Soriano, dept. Junín; idem, Orn. Pér., 2, p. 344, 1884—same localities; SCLATER, Cat. B. Brit. Mus., 14, p. 300, 1888—Peru; BERLEPSCH and STOLZMANN, P.Z.S.Lond., 1896, p. 368—La Gloria, Vitoc and La Merced, Chanchamayo, dept. Junín; idem, Ornis, 13, p. 114, 1906—Huaynapata, Marcapata Valley, dept. Cuzco; Hellmayr, Ibis, 1906, p. 29—Peru (monog.); idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—Peru; idem, Arch. Naturg., 85, A, Heft 10, p. 62, 1920—Chaquimayo, Sierra de Carabaya, Peru.

Range: Upper Tropical Zone of central and southeastern Peru, in depts. Huánuco, Junín, Cuzco, and northern Puno (Sierra de Carabaya).

5: Peru (Huachipa, dept. Huánuco 5).

*Pipra iris iris Schinz. OPALESCENT MANAKIN.

Pipra Iris Schinz, Naturg. Vögel, 2nd ed., livr. 7, p. 91, pl. 39,² left upper fig. (=male), 1851—"Guyana," errore, we substitute Pará; see ZIMMER, Proc. Biol. Soc. Wash., 38, p. 87, 1925 (crit.).

Pipra opalizans Pelzeln, Orn. Bras., 2, pp. 128, 186, Sept., 1868—Pará (descr. of male); BERLEPSCH, Ibis, 1898, p. 60, pl. 2 (=male)—Ourém, Rio Guamá; HELLMAYR, Verh. Zool. Bot. Ges. Wien, 53, p. 201, 1903-Benevides, near Pará (descr. of female); idem, Nov. Zool., 12, p. 294, 1905-Igarapéassú, Pará; idem, l.c., 13, p. 363, 1906-Santo Antonio do Prata; idem, Ibis, 1906, p. 41 - Pará district (monog.); SNETHLAGE, Journ. Orn., 55, p. 289, 1907-Santo Antonio do Prata; HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—near Pará; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 29, 90, 1912—Peixe-Boi, east of Pará (Pará localities); SNETHLAGE, Bol. Mus. Goeldi, 8, p. 367, 1914—Mocajatuba, Providencia, Ananindeua, Benevides, Apehú, Santa Izabel, Peixe-Boi, and Santo Antonio do Prata, Pará district, and (?) Cussary, lower Amazon; BEEBE, Zoologica (N. Y.), 2, p. 91, 1916—Utinga, near Pará; Bond, Auk, 44, p. 563, 1927—"Patagonia," forty miles east of Pará; STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 167, 1928-Utinga, Santa Izabel, and Castanhal, Pará.

valley at Chuchurras, alt. 320 meters, P. coronata exquisita was found. Females of the two species are inseparable.

Material examined.—Dept. Huánuco: Pozuzo 7, Huachipa 5.—Dept. Junín: La Gloria 2.—Dept. Cuzco: Marcapata (alt. 1000 meters) 5.—Dept. Puno: Río Huacamayo (alt. 1000 meters) 1, Chaquimayo, Sierra de Carabaya 2.

¹Sometimes spelled caeruleicapilla.

²The plate erroneously inscribed "P. strigilata."

³The locality "Cussary", if correct, may be referable to P. i. eucephala.

23

Range: Northeastern Brazil, in the eastern section of the state of Pará, from the Tocantins east to Ourém, Rio Guamá.¹

6: Brazil (Utinga, near Pará 6).

Pipra iris eucephala Todd.2 WESTERN OPALESCENT MANAKIN.

Pipra iris eucephala Todd, Proc. Biol. Soc. Wash., 41, p. 112, 1928—Miritituba, Rio Tapajóz, Brazil.

Range: Northern Brazil, in the western section of the state of Pará (Santarém, Colonia do Mojuy, and Miritituba, on the right bank of the Rio Tapajóz).

Pipra nattereri Sclater.3 Natterer's Manakin.

Pipra nattereri Sclater, P.Z.S.Lond., "1864," p. 611, pl. 39, 1865—Borba, Rio Madeira; Pelzeln, Orn. Bras., 2, p. 127, 1868—Borba, Rio Madeira and Engenho do Gama, Matto Grosso (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 302, 1888—Borba; Hellmayr, Ibis, 1906, p. 40—Borba (monog.); Snethlage, Journ. Orn., 56, p. 504, 1908—Villa Braga, Rio Tapajóz; Hellmayr, Nov. Zool., 14, p. 360, 1907—Borba (crit.); idem, l.c., 17, p. 307, 1910—Calama and Allianca (Rio Madeira), Santa Izabel (Rio Preto), and Jamarysinho, Rio Machados (crit.); idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—left bank of Tapajóz to Rio Madeira; Snethlage, Bol. Mus. Goeldi, 8, p. 366, 1914—Rio Tapajóz (Boim, Villa Braga) and (?) Rio Jamauchim (Tucunaré).

Pipra gracilis Hellmayr, Verh. Zool. Bot. Ges. Wien, 53, p. 202, 1903— Engenho do Gama, Rio Guaporé, Matto Grosso (descr. of female); idem, Ibis, 1906, p. 39—Engenho do Gama.

Range: Northern Brazil, south of the Amazon, from the left bank of the Tapajóz west to the right bank of the Rio Madeira, extending south to western Matto Grosso (Engenho do Gama, Rio Guaporé).

¹Material examined.—Brazil, Pará: Igarapé-assú 3, Benevides 1, Santo Antonio do Prata 1, Utinga 6, Peixe-Boi 14, Ourém (Rio Guamá) 1.

²Pipra iris eucephala Todd; "Similar to P. i. iris in heavy bill, but adult male with the opalescent feathers of the pileum continued over the forehead almost to the base of the bill; female with the pileum decidedly bluish, in contrast with the back, instead of pure green." (W. E. C. Todd, l.c.).

This is obviously a well-defined race, pointing in certain respects to *P. nattereri*, of the left bank of the Tapajóz, which may ultimately prove to be conspecific with *P. iris*.

³Pipra nattereri SCLATER is probably a western race of P. iris. The females are very much alike, that of P. nattereri differing chiefly by reason of its smaller darker bill and more bluish crown. Birds from the Río Tapajóz are identical with a topotypical series, while those from Calama and farther up the Rio Madeira are, as a rule, more deeply and more solidly green on throat and chest. However, the variation is not constant enough to warrant the recognition of a separate race, for which the name P. gracilis would be available.

Material examined.—Rio Tapajóz: Villa Braga 3, Itaituba 3.—Rio Madeira: Borba 16, Calama 14, Allianca 3, Paraíso 1; Santa Izabel, Rio Preto 1; Jamarysinho, Rio Machados 3.—Engenho do Gama, Matto Grosso (female) 1.

Probably referable to P. iris eucephala.

Range: Western Costa Rica and western Panama (Chiriqui).² 4: Costa Rica (Boruca 3, Térraba 1).

*Pipra mentalis minor Hartert. LESSER YELLOW-THIGHED MANAKIN.

¹The few adult males seen from eastern Costa Rica (Orosi, Angostura, Talamanca) appear to me decidedly referable to the northern race, with which they agree in proportion of tail, pale yellow thighs and chin-spot, as well as in the more crested, flame-scarlet head.

Twenty-nine specimens from Mexico (Córdoba) to Nicaragua, and five from eastern Costa Rica examined.

²Material examined.—Panama: Chiriquí 15, Sevilla Island 2.—Costa Rica (Boruca, Pozo Azul de Pirris, Térraba, Miravelles) 22.

⁸Pipra mentalis minor HARTERT: Adult male agreeing with P. m. ignifera in deep black under parts; but on average smaller, with shorter, weaker bill; head

Pipra mentalis minor HARTERT, Nov. Zool., 5, p. 489, 1898-Cachaví, prov. Esmeraldas, Ecuador (type examined); HELLMAYR, Ibis, 1906, p. 16western Ecuador (monog.); idem in WYTSMAN, Gen. Av., Part 9, p. 7, 1910-western Ecuador; idem, P.Z.S.Lond., 1911, p. 1139-Río Cajón, Sipi, Noanamá, and Nóvita, Pacific Colombia; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 480, 1917-Baudó, Noanamá, Nóvita, San José, and Barbacoas, Colombia; idem, l.c., 55, p. 531, 1926—Esmeraldas and Río de Oro, Ecuador; GRISCOM, Bull. Mus. Comp. Zool., 69, p. 179, 1929-Cana, Darién.

Chiroxiphia mentalis (not Pipra mentalis SCLATER) LAWRENCE, Ann. Lyc. Nat. Hist. N. Y., 7, p. 296, 1862-Lion Hill, Panama.

Pipra mentalis Sclater and Salvin, P.Z.S.Lond., 1864, p. 362-Panama; SCLATER, Cat. B. Brit. Mus., 14, p. 295, 1888—part, spec. w-a1, Panama; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 108, 1890-part, Lion Hill, Panama.

Pipra mentalis ignifera (not of BANGS) HELLMAYR, Ibis, 1906, p. 15-part, Lion Hill, Panama; RIDGWAY, Bull. U. S. Nat. Mus., 50, Part 4, p. 747, 1907—part, Panama; HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 7, 1910-part, Panama; STONE, Proc. Acad. Nat. Sci. Phila., 70, p. 268, 1918-Gatún, Panama.

Pipra mentalis subsp. minor SALVADORI and FESTA, Boll. Mus. Zool. Torino, 14, No. 362, p. 14, 1899-Río Peripa, Ecuador.

Range: Tropical lowlands of the Pacific coast of Ecuador and Colombia, north to eastern Panama (Canal Zone).

Ecuador (Carondeled, prov. Esmeraldas 1); Colombia (Condoto, Río Condoto 1); Panama (Barro Colorado Island 4).

*Pipra erythrocephala erythrocephala (Linnaeus). Golden-Headed MANAKIN.

Parus erythrocephalus Linnaeus, Syst. Nat., 10th ed., 1, p. 191, 1758—based on EDWARDS, Nat. Hist. Birds, 1, p. 21, lower figure, Surinam.

Pipra aurocapilla Lichtenstein, Verz. Dubl. Berliner Mus., p. 29, 1823-"Brazil" (descr. of male); WAGLER, Isis, 1830, p. 934-Cayenne (descr.);

even deeper red, this being particularly noticeable on the forehead and crown; gonydeal angle but narrowly bordered with yellow; inner secondaries only with narrower, yellowish inner margins; thighs somewhat paler; female merely distinguishable by shorter wings, smaller bill, and more yellowish under wing coverts. Wing (male) 55-58; tail 26-28; bill 8-9 with topotypes.

Birds from western Colombia agree in coloration and small bill, but approach P. m. ignifera in length of wing and tail, ten adult males measuring 57-60, resp. 28-29 mm. Three from Panama, however, are small again (wing 54-55 mm.), though their bills are larger than in Ecuadorian specimens.

Material examined.—Ecuador, prov. Esmeraldas (Cachaví, San Javier, Carondeled) 15.—Colombia: Río Cajón 2, Sipi 4, Noanamá 4, Nóvita 6, Condoto, Río Condoto 1.—Panama: Barro Colorado Island 4.

¹Frequently spelled auricapilla.

Pipra erythrocephala erythrocephala RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 748, 1907—eastern Panama through Colombia and Venezuela to Trinidad and Cayenne; CHERRIE, Mus. Brookl. Inst., Sci. Bull., 1, p. 364,

1908—Aripo and Carenage, Trinidad; idem, l.c., 2, p. 248, 1916—from Somborge, near mouth of Río Meta, up the Orinoco, and Caura Valley; Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 86, 1912—San Esteban, Cumbre Chiquita, and Las Quiguas, Carabobo; Chapman, Bull. Amer. Mus. N.H., 36, p. 479, 1917—Río Salaqui, Los Cisneros (Río Dagua), Puerto Valdivia and Río Frío, Cauca, and west of Honda, Colombia (spec. examined); Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 72, 1918—Lelydorp, Wanaweg, Javaweg, and Rijsdijkweg, Surinam; Todd and Carriker, Ann. Carnegie Mus., 14, p. 334, 1922—Onaca, Cincinnati, La Tigrera, Las Vegas, Las Taguas, Minca, and Don Diego, Colombia; Griscom, Bull. Mus. Comp. Zool., 69, p. 179, 1929—Cana, Darién (crit.).

Range: French, Dutch, and British Guiana; extreme northeastern Brazil, from the Guianan border south to the north bank of the lower Amazon, west to the Rio Negro; Trinidad; Venezuela, from the north coast south to the Orinoco Valley; Colombia, west of the Eastern Andes (except the valley of the Río Lebrija), and eastern Panama, west to the Canal Zone (Chepo).¹

5: Dutch Guiana (Lelydorp, Surinam 1); British Guiana (Hyde Park, Demerara River 2); Venezuela (Puerto Cabello, Carabobo 1); Brazil (Conceição, Rio Branco 1).

Further subdivision of this race appears to be impracticable. Adult males from Trinidad, the north coast of Venezuela, Santa Marta, and Darién (eastern Panama) have the head generally of a slightly deeper orange yellow hue, but as only about 40% of the specimens are distinguishable, I do not see any advantage in recognizing P. e. actinosa. Birds from the Caura River are precisely similar to a Guianan series, while those from the north bank of the lower Amazon (Obidos and Rio Maecurú) and Manáos are among the smallest I have seen. Specimens from Pacific Colombia (Río Salaqui; Murindo and Sautata, Río Atrato; Los Cisneros, Río Dagua) agree with those from the northern districts (Santa Marta; Jaraquiel, Bolívar) and Panama. Birds from the Cauca Valley evidently form the transition to P. e. flammiceps. One male each from Puerto Valdivia and Río Frío are inseparable, in size as well as in coloration, from the specimen with the most deeply colored head from the Pacific coast (Murindo; Carnegie Museum, No. 64179), while another from Puerto Valdivia, by reason of its shorter wings and more reddish orange cap, closely approaches the paler example of flammiceps from El Tambor. Three males from west of Honda, Magdalena River, however, are again indistinguishable from the Santa Marta average. On the upper Rio Negro, this form gradually passes into the western P. e. berlepschi, and six (out of seven) males from Barcellos and various localities farther up the river have the light cadmium yellow head of that form, though in dimensions they rather agree with Guianan specimens. Females vary much individually.

Material examined.—French Guiana: Cayenne 7, Mana 1, Tamanoir, Mana River 10, Pied Saut, Oyapock 7, Mahury 1.—Dutch Guiana; Lelydorp 1, near Paramaribo 4.—British Guiana: Demerara River 2, Merumé Mountains 2.—Brazil: Upper Rocana 1; Conceição, Rio Branco 1; Obidos 2; Rio Maecurú 1; Manáos 6; Barcellos 2; Marabitanas 4; Rio Içanna [=Rio Isana] 1; Rio Xié 1.—Venezuela: Maripa, Caura 5, Upper Caura 1, El Llagual, Caura district 3; Puerto Cabello 3, San Esteban 3, Las Quiguas 4, Cumbre Chiquita 1; Nevesi, Paría Peninsula 2, Yacua, Paría Peninsula 2.—Island of Trinidad 28.—Colombia: Santa Marta region 21; Jaraquiel, Bolívar 3; west of Honda, Magdalena Valley 3; Puerto Valdivia, lower Cauca 2; Río Frío, Cauca 1; Los Cisneros, Río Dagua 3; Murindo, Antioquia 1; Sautata, Río Atrato 1; Río Salaqui, Chocó 1.—Panama: Mount Sapo, Darién 20.

*Pipra erythrocephala berlepschi Ridgway. Berlepsch's Golden-HEADED MANAKIN.

Pipra erythrocephala berlepschi Ridgway, Proc. Biol. Soc. Wash., 19, p. 117, 1906—Nauta, northeastern Peru; Ménégaux, Miss. Serv. Géog. Armée Mes. Arc Mérid. Equat., 9, p. B. 60, 1911—Gualaquiza, Ecuador; Chapman, Bull. Amer. Mus. N.H., 36, p. 480, 1917—La Morelia, Florencia, Buenavista, and Villavicencio, eastern Colombia (spec. examined); idem, l.c., 55, p. 530, 1926—Zamora, Río Suno, and below San José, Ecuador (spec. examined); Bangs and Noble, Auk, 35, p. 453, 1918—Perico, Río Marañón, Peru; Berlioz, Bull. Mus. Hist. Nat. Paris, 34, p. 72, 1928—Río Suno, Ecuador.

Pipra auricapilla (not of Lichtenstein) Sclater P.Z.S.Lond., 26, p. 457, 1858—Gualaquiza, Ecuador; Sclater and Salvin, l.c., 1866, p. 567—Peru (probably Nauta); idem, l.c., 1867, p. 751—Chyavetas, Peru; idem, l.c., 1867, p. 978—Pebas; idem, l.c., 1873, p. 283—Nauta, Chyavetas, Pebas; Taczanowski, Orn. Pér., 2, p. 340, 1884—Nauta, Chyavetas, Iquitos; Sclater, Cat. B. Brit. Mus., 14, p. 296, 1888—part, spec. r-d', Pebas, Chyavetas (Peru), Río Napo, Bogotá; Allen, Bull. Amer. Mus. N.H., 2, p. 72, 1889—Río Napo, Ecuador; Berlepsch, Journ. Orn., 37, p. 99, 1889—Tonantins, Rio Solimões; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 1899—Gualaquiza and Zamora; Goodfellow, Ibis, 1901, p. 708—Coca, upper Napo.

Pipra erythrocephala (not of LINNAEUS) HELLMAYR, Ibis, 1906, p. 20—part, "Tocantins" [=Tonantins], Rio Solimões, Brazil, Peru, eastern Ecuador, and Bogotá; idem in WYTSMAN, Gen. Av. Part 9, p. 7, 1910—part, Ecuador, Peru, eastern Colombia.

Range: Upper Amazonia, from the eastern slope of the East Colombian Andes (north to Boyacá) through eastern Ecuador south to the north bank of the Rio Solimões in Brazil (Tonantins) and to northern Peru (chiefly on the north bank of the Marañón, but crossing that river west of the Huallaga).

15: Colombia (Bogotá 5); Peru (Moyobamba 9, Yurimaguas 1).

¹Pipra erythrocephala berlepschi Ridgway: Similar to P. e. erythrocephala, but on average larger, and head in adult male decidedly paler, cadmium yellow rather than orange, without any, or with mere traces of a blood-red posterior margin.

Birds from eastern Colombia, Ecuador, and Peru agree well together, while three males from Tonantins, Rio Solimões, Brazil, have a slight suggestion of the red posterior border to the yellow cap. On the Solimões as well as in Peru, the range of this race is separated from that of the red-headed form by the Amazon Valley, and in the eastern section of the Marañón River it apparently is found only on its northern bank. However, west of the junction of the Huallaga River, it crosses the Marañón, numerous specimens having been taken at Chyavetas and Moyobamba.

Material examined.—Colombia: "Bogotá" 15; Palmar, Boyacá 3; La Colorada, Boyacá 2; Villavicencio 1; Florencia, Caquetá 3; La Morelia, Caquetá 2.— Ecuador: Río Suno 10, San José 5, Zamora 6.—Peru: Río Tigre 1, Nauta 2, Pebas 2, Chyavetas 1, Moyobamba 9, Yurimaguas 1.—Brazil: Tonantins, Rio Solimões 3.

Pipra erythrocephala flammiceps Todd. FLAME-HEADED MANAKIN.

Pipra erythrocephala flammiceps Todd, Proc. Biol. Soc. Wash., 32, p. 115, 1919—El Tambor, Santander, Colombia (type examined).

(?) Pipra auricapilla (not of Lichtenstein) Berlepsch, Journ. Orn., 32, p. 304, 1884—Bucaramango.

Range: Eastern Colombia (Valley of the Río Lebrija, dept. Santander).

*Pipra erythrocephala rubrocapilla Temminck.² RED-HEADED MANA-KIN.

Pipra rubrocapilla3 TEMMINCK, Nouv. Rec. Pl. Col., livr. 9, pl. 54, fig. 3 (male), 1821—"Brésil," we suggested Bahia as type locality; Sclater, P.Z.S. Lond., 25, p. 265, 1857-Ega, Rio Solimões; Pelzeln, Orn. Bras., 2, p. 127, 1868-Bahia, Engenho do Gama (Matto Grosso), Borba (Rio Madeira), and Manaqueri (Rio Solimões), Brazil (spec. examined); SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 283—Santa Cruz, Río Huallaga, Peru (spec. in Tring Museum examined); FORBES, Ibis, 1881, p. 344-Caxanga, Recife, and Beberibi, Pernambuco; Sclater, Cat. B. Brit. Mus., 14, p. 295, 1888 -Pernambuco, Bahia, "Rio Claro, Goyaz," "Iquitos," Peru, Ega, Brazil; RIKER and CHAPMAN, Auk, 8, p. 25, 1891—Santarém; IHERING, Rev. Mus. Paul., 4, p. 156, 1900—Cantagallo and Nova Friburgo; idem, l.c., 6, p. 435, 1905-Rio Juruá (spec. examined); HELLMAYR, Ibis, 1906, p. 11-Brazil and eastern Peru (monog.); IHERING and IHERING, Cat. Faun. Braz., I. p. 200, 1907-Porto Cachoeira (Espirito Santo), Bahia, Rio Juruá, and Santarém; SNETHLAGE, Journ. Orn., 55, p. 289, 1907—Pará, Rio Capim, Castanhal; idem, l.c., 56, p. 12, 1908—Cachoeira, Rio Purús; idem, l.c., p. 504, 1908-Villa Braga, Rio Tapajóz; idem, l.c., p. 529, 1908 —Arumatheua, Rio Tocantins; Hellmayr, Nov. Zool., 14, p. 49, 1907— Teffé, Rio Solimões; idem, l.c., 17, p. 307, 1910-Calama, Allianca, and

¹Pipra erythrocephala flammiceps TODD: Very close to P. e. erythrocephala, but slightly smaller; adult male with head more deeply colored, occiput and hind neck being strongly suffused with orange chrome; sides of head likewise more reddish orange; no red posterior border to cap. Wing (two adult males) 54; tail 18; bill 8½.

This form rests on two males from the Río Lebrija in the Carnegie Museum. The type has a redder head than any specimen of the Golden-headed Manakin seen by me. The second example, taken on the same day, however, is less characteristic, being closely approached by one of the Puerto Valdivia skins in the American Museum of Natural History. As pointed out above, birds from the Honda region appear to be inseparable from typical erythrocephala, leaving rather a peculiarly restricted habitat for flammiceps. More information is necessary before its claims for distinction can be considered as established.

Material examined.—Colombia: El Tambor, Río Lebrija, Santander 2.

²An earlier name is possibly *Pipra erythrolophos* VIEILLOT (Tabl. Enc. Méth., Orn., I, livr. 89, p. 390, 1820—"le Pérou"). No mention being made of the coloration of thighs or under wing coverts, it cannot be decided, however, whether it is referable to *P. e. rubrocapilla* or *P. chloromeros*, both of which are found in Peru. The type is not in the Paris Museum.

3Often spelled rubricapilla.

Localities doubtless erroneous.

Maroins (Rio Machados), Rio Madeira; idem in Wytsman, Gen. Av., Part 9, p. 7, 1910—eastern Peru and Brazil, south of the Amazon; Snethlage, Bol. Mus. Goeldi, 8, p. 365, 1914—Pará, Mocajatuba, Providencia, Ananindeua, Benevides, Santa Izabel, Castanhal, Peixe-Boi, Santo Antonio do Prata, Rio Capim (Aproaga), Rio Mojú, Rio Tocantins (Arumatheua), Rio Xingú (Victoria), Tamucury, Rio Tapajóz (Boim, Villa Braga), Rio Purús (Cachoeira); Lima, Rev. Mus. Paul., 12, (2), p. 100, 1920—Ilhéos to Belmonte, Bahia.

Pipra erythrocephala (not of Linnaeus) Wied, Reise Bras., 1, p. 187 (ed. in 8vo p. 184), 1820—Barra do Jucú, Espirito Santo; Lichtenstein, Verz. Dubl. Berliner Mus., p. 29, 1823—Brazil (descr. of female); Wied, Beitr. Naturg. Bras., 3, (1), p. 422, 1830—eastern Brazil; Wagler, Isis, 1830, p. 933—"Guiana," Brasilia; Burmeister, Syst. Übers. Th. Bras., 2, p. 433, 1856—Nova Friburgo, Rio.

Pipra auricapilla (not of Lichtenstein) Layard, Ibis, 1873, p. 384—Nazaré, near Pará (seen only); Goeldi, Ibis, 1903, p. 499—Rio Capim.

Pipra rubrocapilla subsp. Hellmayr, Nov. Zool., 13, p. 362, 1906—Santo Antonio do Prata, Pará (crit.).

Pipra erythrocephala rubrocapilla HELLMAYR, Abhandl. Bayr. Ak. Wiss., Mathphys. Kl., 26, No. 2, pp. 27, 90, 1912—Peixe-Boi and Ipitinga (Pará localities); BEEBE, Zoologica (N.Y.), 2, p. 90, 1916—Utinga, near Pará; STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 167, 1928—Pará, Rio Guamá, Rio Inhangapy, Pinheira, Pará district.

Range: Brazil, south of the Amazon, extending along the Rio Madeira south to western Matto Grosso (Rio Guaporé) and on the east coast to Espirito Santo and Rio de Janeiro; also the adjacent section of northeastern Peru, east of the Huallaga River (Santa Cruz).

10: Brazil (Bahia 2; Santo Amaro, Bahia 3; Magoary, Pará 1; Utinga, Pará 3; Santarém 1).

*Pipra pipra anthracina Ridgway.2 Zeledón's Manakin.

¹There is obviously no local variation in the Red-headed Manakin, specimens from eastern Brazil (Bahia, Rio de Janeiro) being inseparable from an Amazonian series. A single adult male obtained by E. Bartlett at Santa Cruz, on Sept. 24, 1866, likewise compares well with the Brazilian average. Certain skins from Pará exhibit a decided tendency toward P. e. erythrocephala, of the north bank, by having the bases of the feathers on the anterior crown distinctly orange.

having the bases of the feathers on the anterior crown distinctly orange.

In addition to the scarlet head, P. e. rubrocapilla may be distinguished from the yellow-headed forms by its longer tail and more grayish green (less yellowish)

under parts of the female sex.

Material examined.—Brazil: Rio de Janeiro 1; Bahia 15, Santo Amaro, Bahia 3; São Lourenço, Pernambuco 5; Pará region 24; Santarém 1; Rio Madeira, Calama 3, Borba 5, Maroins 1; Engenho do Gama, Matto Grosso (d'ad.) 1; Manaqueri, Rio Solimões 3; Teffé 4; Rio Juruá 1.—Peru: Santa Cruz 1.

²Pipra pipra anthracina RIDGWAY: Adult male closely similar to P. p. coracina, but decidedly smaller; body plumage duller, opaque velvety black, without trace of the bluish gloss; under tail coverts mostly tipped with grayish or dingy yellowish. Wing 60-63; tail 27-29; bill 9. No female seen.

Material examined.—Panama: Chiriquí I; Chitrá, Veraguas I; Cordillera de

Tolé 1; Veraguas (unspecified) 6.

Pipra pipra anthracina RIDGWAY, Proc. Biol. Soc. Wash., 19, p. 117, 1906-Moravia, Costa Rica; idem, Bull. U.S. Nat. Mus., 50, Part 4, p. 751, 1907 -Panama and southwestern Costa Rica (monog., full bibliography); CARRIKER, Ann. Carnegie Mus., 6, p. 680, 1910—Guayabo, Costa Rica.

Pipra leucocilla (not of LINNAEUS) SALVIN, P.Z.S. Lond., 1867, p. 149-Cordillera de Tolé, Veragua (spec. examined); idem, l.c., 1870, p. 200-Calovevora, Chitrá, and Boqueti de Chitrá, Veragua (spec examined); SCLATER, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. c-h, Chitrá, Calevovora, Santa Fé, and Cordillera de Tolé, Veragua; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 110, 1890—part, Panama; CHERRIE, Proc. U. S. Nat Mus., 14, p. 536, 1891—Costa Rica (female descr.); HELLMAYR, Ibis, 1906, p 22-part, Veragua.

Pibra leucocilla anthracina HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—southwestern Costa Rica and Veragua; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p 29, 1912—Costa Rica and western Panama (crit.).

Range: Costa Rica (Moravia; Guayabo) and western Panama (Chiriquí; Veraguas).

Panama (Veraguas 1).

Pipra pipra minima Chapman. LEAST MANAKIN.

Pipra leucocilla minor (not Pipra mentalis minor HARTERT, 1898) CHAPMAN Bull. Amer. Mus. N. H., 33, p. 623, 1914—Cocal, Western Andes of Colombia (type examined).

Pipra leucocilla minimus CHAPMAN, Bull. Amer. Mus. N. H., 36, p. 480, 1917—new name for P. leucocilla minor CHAPMAN, preoccupied; Cocal, Colombia.

Range: Western Andes of Colombia (Cocal, west of Popayán).

*Pipra pipra coracina Sclater. 2 Sclater's Black Manakin.

Pipra coracina Sclater, P.Z.S.Lond., 24, p. 29, June, 1856-Bogotá (type in British Museum examined); idem, l.c., 26, p. 71 1858-Río Napo, Ecuador.

Pipra pipra minima CHAPMAN: Adult male most nearly resembling P. p. coracina and body plumage, as in this form, velvety black, with a slight silky gloss; but much smaller; white crest shorter; under tail coverts tipped with grayish, as in P. p. anthracina. Female unknown. Wing (two adult males from Cocal) 54-55; tail 24-25; bill 81/2-9.

²Pipra pipra coracina Sclater: Differing from P. p. pipra by larger size; deep velvety black but faintly glossed body plumage of the adult male, and brighter green coloration, particularly below, of the female sex. Wing (male) 66-70, (female) 67; tail 27-32; bill 9.

Ecuadorian specimens agree with those from Bogotá, and so does also a single male from Pomará, Peru, in the American Museum of Natural History. A male from the Boca de Rio Curaray, in southeastern Ecuador, however, hardly differs from P. p. pipra.

Material examined.—Colombia: Bogotá 8, Buenavista 2.—Ecuador: San José 5, Gualaquiza 2, "Río Napo" 3; Guayaba, Río Zamora 1; Río Suno, above Avila 1.—Peru: Pomará, lower Marañón 1.

Pipra leucocilla (not of Linnaeus) Sclater, P.Z.S.Lond., 22, p. 114, 1854—Quijos, Ecuador; idem, 1 c., 23, p. 152, 1855—Bogotá; idem, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. i-o, Bogotá, Sarayacu, and Río Napo; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 14, 1899—Gualaquiza, Ecuador.

Pipra leucocilla coracina Hellmayr, Ibis, 1906, p. 26—part, Bogotá and eastern Ecuador; idem in Wytsman, Gen. Av., Part 9, p. 8, 1910—Colombia and Ecuador; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26. No, 2, p. 29, 1912—Colombia and eastern Ecuador (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 481, 1917—Buenavista (above Villavicencio) and Andalucía, Eastern Andes, Colombia; idem, l.c., 55, p. 531, 1926—Guayaba, Zamora, Río Suno, and below San José, Ecuador.

Range: Tropical Zone of the Eastern Andes of Colombia,¹ eastern Ecuador, and northwestern Peru (Pomará, lower Marañón, dept. Amazonas).

1: Colombia (Bogotá 1).

*Pipra pipra pipra Linnaeus. WHITE-CROWNED BLACK MANAKIN.

Parus pipra Linnaeus, Syst. Nat., 10th ed., 1, p. 190, 1758—based on "Cacotototl" Seba, Thes., 2, p. 102, pl. 96, fig. 5, "in Indiis"=Surinam.

Pipra leucocilla LINNAEUS, Mus. Ad. Frid., 2, Prodr., p. 33, 1764-no locality indicated, Surinam suggested as type locality (auct. BERLEPSCH and HAR-TERT, 1902); SCHOMBURGK, Reisen Brit. Guiana, 1, p. 215, 1847-Whomana River, affluent of the Barima; CABANIS, l. c., 3, p. 697, 1848-British Guiana; Pelzeln, Orn. Bras., 2, p. 127, 1868—Barra do Rio Negro [= Manáos J., Marabitanas, and Rio Içanna, Rio Negro (spec. examined); SALVIN, Ibis, 1885, p. 300-Bartica Grove, Camacusa, and Merumé Mts.. British Guiana; W. Sclater, l. c., 1887, p. 318-Maccasseema, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. w-c', Bartica Grove, Camacusa, Cayenne, Maroni River; BERLEPSCH and HARTERT, Nov. Zool., 9, p. 53, 1902-Suapure, La Pricion, and Nicare, Caura River, Venezuela (spec. examined); Ménégaux, Bull. Mus. Hist. Nat. Paris, 10, p. 180, 1904—Camopi, Mahury, and Oyack Mts., French Guiana; HELLMAYR, Ibis, 1906, p. 22-part, Cayenne, Surinam, British Guiana, eastern Venezuela (Caura), and Rio Negro; BERLEPSCH, l. c., 15, pp. 137, 318, 1908—Ipousin, Approuague River (French Guiana) localities; MÉNÉGAUX, Bull. Mus. Hist. Nat. Paris, 14, p. 12, 1908-French Guiana; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 365, 1914-part, Rio Jary (Santo Antonio da Cachoeira), Obidos, and Rio Jamundá (Faro); CHUBB, Birds Brit. Guiana, 2, p. 246, 1921—British Guiana (numerous localities).

¹Pipra leucocilla SCLATER and SALVIN (P.Z.S.Lond., 1875, p. 237—San Cristóbal, Táchira, western Venezuela) probably belongs here. Unfortunately, the specimens are lost.

²Although the more detailed description, added on p. 191, refers to another species, Arundinicola leucocephala, as pointed out by Векьерссн and Нактект (Nov. Zool., 9, p. 50, note*, 1902), Linnaeus's diagnosis and references pertain exclusively to the White-crowned Black Manakin which must, therefore, be called P. p. pipra (see ZIMMER, Proc. Biol. Soc. Wash., 42, pp. 86-87, 1929).

Pipra leucocapilla GMELIN, Syst. Nat., 1, (2), p. 1002, 1789—new name for Pipra leucocilla LINNAEUS.

35

Pipra leucocilla leucocilla Hellmayr in Wytsman, Gen. Av., Part 9, p. 7, 1910—part, Guiana, Venezuela, and northwestern Brazil (Rio Negro); idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 28, 1912—part, excl. Peru; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 72, 1918—Lelydorp, Libanonweg, and Rijsdijkweg, Surinam.

Pipra pipra pipra CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 248, 1916—Caura, Venezuela.

Range: French, Dutch, and British Guiana; eastern Venezuela (Caura Valley); northern Brazil, north of the Amazon, west to the Rio Negro and Manacapurú, Rio Solimões.¹

13: French Guiana (Saint Jean du Maroni 1, Saint Laurent du Maroni 1); Dutch Guiana (Rijsdijkweg 1); British Guiana (Demerara River 3, Caramang River 3); Brazil (Conceição, Rio Branco 3; Itacoatiará 1).

*Pipra pipra microlopha Zimmer.2 SHORT-CRESTED MANAKIN.

Pipra pipra microlopha ZIMMER, Proc. Biol. Soc. Wash., 42, p. 85, 1929—Puerto Bermúdez, Río Pichis, Ucayali drainage basin, Peru.

Pipra leucocilla (not of Linnaeus) Sclater, P. Z. S. Lond., 25, p. 265, 1857—Ega, Rio Solimões; Sclater and Salvin, l. c., 1866, p. 190—Sarayacu, Río Ucayali, Peru; idem, l. c., 1873, p. 283—part, Sarayacu; Taczanowski, Orn. Pér., 2, p. 341, 1884—part, Sarayacu; Sclater, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. q, r, Ega and Río Ucayali; Ihering, Rev. Mus. Paul., 6, p. 435, 1905—Rio Juruá; idem, Cat. Faun. Braz., 1, p. 299, 1907—part, Rio Juruá; Hellmayr, Ibis, 1906, p. 22—part, Ega, Rio Juruá, Brazil, and Sarayacu, Peru; idem, Nov. Zool., 14, p. 49, 1907—Teffé, Rio Solimões.

Birds from Manacapurú and the Rio Negro are identical with series from

Guiana and eastern Venezuela (Caura Valley).

Material examined.—French Guiana: Maroni River 2, Ipousin, Approuague River 1.—Dutch Guiana: Near Paramaribo 4, Rijsdijkweg 1.—British Guiana: Demerara River 3, Caramang River 3, Camacusa 3.—Brazil: Rio Negro (Manáos, Marabitanas, Rio Içanna [=Rio Isana]) 15; Manacapurú, Rio Solimões 3.—Venezuela: Caura Valley (Suapure, Nicare, La Pricion) 25.

²Pipra pipra microlopha ZIMMER: Adult male nearest to P. p. comata, but crest decidedly shorter and ending in a point instead of being rounded posteriorly, and upper parts less glossed with metallic blue. Wing (adult male) 65-69; tail 29-30; bill 8½-9.

This form cannot well be united to any other known race. Although more information about the exact limits of its range is urgently desired, it appears to replace $P.\ p.\ comata$ in the low tropical destricts of eastern Peru. By its less glossy plumage in the male sex, it points in the direction of $P.\ p.\ coracina$, but has a much shorter, differently shaped crest with much less black at the base of the feathers. Birds from Orosa (on the south bank of the Marañón about halfway between the mouth of the Napo and Pebas, dept. Loreto) and São Paulo de Olivença, Brazil, agree with the type except in being slightly larger and in having more extensive dusky bases to the crest feathers. Here should no doubt also be referred specimens recorded as $P.\ leucocilla$ from Sarayacu (Ucayali), Teffé (Rio Solimões), and Juruá.

Pipra leucocilla leucocilla HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 7, 1910—part, Rio Solimões, Rio Juruá, and northeastern Peru.

Range: Tropical lowlands of the Ucayali drainage basin in eastern Peru, south to Puerto Bermúdez, dept. Junín, north to the south bank of the Marañón,¹ and adjacent section of western Brazil (Rio Juruá; Teffé and São Paulo de Olivença, south bank of Rio Solimões).

6: Peru (Puerto Bermúdez, Rio Pichis, dept. Junín 6).

*Pipra pipra comata Berlepsch and Stolzmann.² Snowy-crested Manakin.

Pipra comata BERLEPSCH and STOLZMANN, Ibis, (6), 6, p. 392, 1894—La Gloria, Chanchamayo and Garita del Sol, Vitoc, dept. Junín (type examined); idem, P.Z.S.Lond., 1896, p. 368—same localities.

Pipra coracina (not of SCLATER) TACZANOWSKI, P.Z.S.Lond., 1882, p. 22—Chirimoto (spec. examined); idem, Orn. Pér., 2, p. 342, 1884—Huambo and Chirimoto, Peru.

Pipra leucocilla (not of LINNAEUS) SCLATER, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. t-v, Huambo and Chirimoto, Peru; Goodfellow, Ibis, 1901, p. 709—"Baeza, Ecuador," errore.³

¹I am unable to identify a single male from Yurimaguas (Munichis) in the collection of Field Museum. It is too small (wing.61; tail 25) for P. p. comata, but differs also from P. p. microlopha in more glossy plumage and somewhat fuller, more rounded crest. Apparently similar specimens from Chamicuros are in the Tring Museum.

The subjoined references pertain to this form of doubtful standing.

Pipra leucocilla (not of Linnaeus) Sclater and Salvin, P. Z. S. Lond., 1867, p. 751—Xeberos, Yurimaguas, Chyavetas; idem, l.c., 1873, p. 283—part, Xeberos, Yurimaguas, Chyavetas, Chamicuros; Taczanowski, l.c., 1882, p. 22—Yurimaguas; idem, Orn. Pér., 2, p. 341, 1884—part, Xeberos, Yurimaguas, Chyavetas, Chamicuros; Sclater, Cat. B. Brit. Mus., 14, p. 297, 1888—part, spec. c, Chamicuros; Hellmayr, Ibis, 1906, p. 22—part, Chamicuros, Xeberos, Yurimaguas.

²Pipra pipra comata Berlepsch and Stolzmann: Very similar to P. p. pipra, but tail on average longer; crest of adult male longer, fuller, and on the forehead white down to the base of the feathers.

Two adult males from Garita del Sol, Vitoc, have somewhat longer tails and fuller crests than any other specimen seen. Birds from Huánuco are smaller, the tail especially is shorter, while the crest is not quite so long and always shows, at least on pileum and nape, distinct dusky bases to the feathers. A series from Huayabamba and two from Uchco (50 miles east of Chachapoyas) are intermediate in length of tail, but in other respects are nearer to the Huánuco birds.

Adult males.—Wing: Garita del Sol 69, 70; Huánuco (Chuchurras, Chinchao, Vista Alegre, Huachipa) 64, 65, 65, 67, 67; Huayabamba 65-66; Chirimoto 61; Uchco 67, 69.—Tail: Garita del Sol 35, 36; Huánuco 28, 28, 28½, 29, 31; Huayabamba 33-34; Chirimoto 31; Uchco 31, 32.

Material examined.—Peru: Uchco, east of Chachapoyas 2; Huayabamba 6; Chirimoto 2; Chuchurras, dept. Huánuco 2; Vista Alegre 2; Chinchao 2; Huachipa 2; Garita del Sol, Vitoc, dept. Junín 2.

³The specimen (now in the Tring Museum) proves on examination, to be one of O. T. Baron's Huayabamba skins, erroneously labeled as being from Baeza.

Pipra leucocilla coracina (not of SCLATER) HELLMAYR, Ibis, 1906, p. 26—part, Guayabamba, Nuevo Loreto, Chirimoto, Huambo, Chuchurras, Peru; Ménégaux, Rev. Franç. d'Orn., 2, p. 8, 1911—Cueva Seca, Rio Tocache, Peru.

Pipra leucocilla comata HELLMAYR, Ibis 1906, p. 27—Valleys of Vitoc and Chanchamayo, Peru (monog.); idem in WYTSMAN, Gen. Av., Part 9, p. 8, 1910—Chanchamayo; CHAPMAN, Bull. U.S.Nat. Mus., 117, p. 99, 1921—Idma, Urubamba Valley, dept. Cuzco, Peru.

Range: Subtropical Zone of Peru, from dept. San Martín south to Junín and (according to Chapman) Cuzco (Urubamba Valley).

6: Peru, dept. Huánuco (Vista Alegre 2, Chinchao 2, Huachipa 2).

Pipra pipra cephaleucos Thunberg. SLATY-BELLIED MANAKIN.

39

Teleonema filicaudum CABANIS and HEINE, Mus. Hein., 2, p. 91, 1859-"Porto" Cabello and Peru.

Cirrhopipra filicauda Berlepsch, Journ. Orn., 37, p. 302, 1889-Yurimaguas, Peru: idem and HARTERT, Nov. Zool., 9, p. 52, 1902-Maipures, Río Orinoco, Venezuela (spec. examined); IHERING, Rev. Mus. Paul., 6, p. 435, 1905—Rio Juruá; SNETHLAGE, Journ. Orn., 56, p. 12, 1908—Cachoeira, Rio Purús; idem, Bol. Mus. Goeldi, 8, p. 362, 1914-Rio Purús.

Range: Western Brazil (from the Rio Juruá and the Rio Purús north to the Rio Negro and Rio Branco); northeastern Peru (Río Javarí; Río Ucayali; Yurimaguas, lower Huallaga; Pebas, Iquitos, Loretovacu, Río Marañón); eastern Ecuador; eastern Colombia (Caquetá region): Venezuela (Maipures on the Orinoco; Campanero, San Esteban, Cumbre Chiquita, and Las Quiguas, state of Carabobo; mountains near Bucarito, Tocuyo, state of Lara; Orope and Río Catatumbo, state of Zulia).1

8: Colombia (Bogotá 2); Brazil (Conceição, Rio Branco 1); Venezuela, state of Zulia (Río Catatumbo 3, Orope 2).

Teleonema heterocerca (Sclater). Sharp-tailed Manakin.

Pipra heterocerca Sclater, P.Z.S.Lond., 28, p. 313, 1860-"in ripis fl. Amazonum sup."

¹Specimens from the Venezuelan coast district (C. t. subpallida), while larger on the average, appear to be inseparable from those of Upper Amazonia. I find much individual variation in the color of the tibial feathers and in the depth of the yellow on the anterior under parts.

Material examined.—Brazil: São Paulo de Olivença, Rio Solimões (types) 3; Manaqueri, Rio Solimões 1; Rio Amajaú 1; Rio Negro 1; Marabitanas 1; Conceição, Rio Branco 1.—Peru: Yurimaguas 3, Río Tigre 4, Iquitos 1.—Ecuador: Archidona 2, Río Napo 3.—Colombia: "Bogotá" 5.—Venezuela: Maipures 10; Campanero 3, Cumbre Chiquita 4, Las Quiguas 3, San Esteban 2; mountains near Bucarito, Tocuyo 5; Catatumbo River 3, Orope 2.

²Teleonema heterocerca (SCLATER): Similar to T. filicauda, but "the outer rectrices acuminate and produced; the second, third, and succeeding pairs in a less degree than the first; the outer pair exceeding the medial rectrices, which have nearly the ordinary normal form, by nearly half an inch; the crimson color extending lower down the back above, and pervading the breast and upper part of the belly."

This species was based on a single male forwarded by one of Jules Verreaux's correspondents from Pará, which has been lost. No other specimen answering the description having since come to hand, its status remains uncertain.

Braz., 1, p. 300, 1907—Bahia and Porto Cachoeira, Espirito Santo.

Machaeropterus strigilatus Allen, Bull. Amer. Mus. N.H., 2, p. 236, 1889—note on Wied's types.

Machaeropterus regulus regulus Hellmayr in Wytsman, Gen. Av., Part 9, p. 11, 1910—Bahia to Rio de Janeiro.

Range: Wooded region of southeastern Brazil, from Bahia south to Espirito Santo and Rio de Janeiro.

1: Brazil (Bahia 1).

¹Machaeropterus regulus regulus (HAHN), having white bases to the crown feathers, reminds one of M. regulus striolatus, but may be easily distinguished by lacking the red stain on the chest, by much darker, light buffy olive rather than dingy white throat, and much narrower as well as rather duller (less chestnut) streaking of the under parts.

Material examined.—Bahia 10; Rio de Janeiro 3; "Brazil" (the types) 2.

Machaeropterus regulus striolatus (Bonaparte). Bonaparte's STRIPED MANAKIN.

Pipra striolata Bonaparte, P.Z.S.Lond., 5, "1837," p. 122, June, 1838—"from that portion of Brazil, bordering on Peru"; Gray and MITCHELL, Gen. Birds, I, p. 274, pl. 67, fig. 2 (male), 1846; SCLATER, P.Z.S.Lond., 25, p. 265, 1857-Rio Javarri; idem, l.c., 26, p. 72, 1858-Río Napo, Ecuador.

Machaeropterus striolatus Sclater and Salvin, P.Z.S.Lond., 1866, p. 567 eastern Peru; idem, l.c., 1867, p. 751-Xeberos and Chyavetas, Peru; idem, l.c., 1867, p. 978—Pebas; idem, l.c., 1873, p. 283—Nauta, Xeberos, Chyavetas, Chamicuros, Pebas, and Río Javarri; TACZANOWSKI, l.c., 1882, p. 23- Yurimaguas; idem, Orn. Pér., 2, p. 347, 1884-Peruvian localities; SCLATER, Cat. B. Brit. Mus., 14, p. 304, 188-part, spec. a-g, Río Ucayali, Chamicuros, Pebas, Río Napo; Allen, Bull. Amer. Mus. N.H., 2, p. 73, 1889-Río Napo; SALVADORI and FESTA, Boll. Mus. Zool. Torino, 14, No. 362, p. 14, 1899—Zamora, Ecuador; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 482, 1917—part, Florencia and La Morelia, Caquetá, Colombia.

Machaeropterus regulus striolatus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 11, 1910—part, Upper Amazonia from Peru to eastern Colombia.

Machaeropterus striolatus striolatus CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 532, 1926-Zamora, Río Suno, below San José, and Río Napo, Ecuador.

Range: Upper Amazonia, from eastern Colombia (Caquetá region) through eastern Ecuador south to northeastern Peru (dept. Loreto).1

*Machaeropterus regulus antioquiae Chapman.² Antioquia Man-AKIN.

Machaeropterus striolatus antioquiae CHAPMAN, Amer. Mus. Novit., 138, p. 5, Oct., 1924-Puerto Valdivia, lower Cauca, Colombia.

Pipra striolata (not of BONAPARTE) SCLATER, P.Z.S.Lond., 23, p. 152, 1855—

Machaeropterus striolatus Sclater, Ibis, 1862, p. 176-"Venezuela" and New Granada; idem and Salvin, P.Z.S.Lond., 1879, p. 517-Medellín, Remedios, and Neche, Colombia; BERLEPSCH, Journ. Orn., 32, p. 305, 1884-Bucaramanga; Sclater, Cat. B. Brit. Mus., 14, p. 304, 1888—part, spec.

¹Material examined.—Colombia: La Morelia, Río Bodoquera 1; Cuembi, Río Putumayo 10.—Ecuador: Río Napo 3, Zamora 2, Río Suno 2, below San José 6.—Peru: Río Tigre, near Pebas 11, Iquitos 1.

²Machaeropterus regulus antioquiae Chapman: Closely similar to M. r. strio-latus, but pileum darker, spectrum red rather than scarlet red, with the bases of the feathers pale gray instead of pure white; back lighter, yellowish citrine rather than warbler green, washed with old gold on lower rump and upper tail coverts; white streaks beneath on average wider. Female indistinguishable from that of striolatus. Wing 51-53; tail 21-23.

Material examined.—Colombia: Alto Bonito, Río Sucio 1; La Frijolera,

lower Cauca 1; upper Cauca 3; "Bogotá" 20.

42 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

h-m, Remedios and Bogotá; Chapman, Bull. Amer. Mus. N.H., 36, p. 482, 1917—part, Puerto Valdivia and La Frijolera (lower Cauca), Alto Bonito (Río Sucio), and west of Honda, Colombia.

Machaeropterus regulus striolatus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 11, 1910—part, Cauca Valley.

Range: Western and central parts of Colombia (Alto Bonito, Río Sucio; Cauca Valley; Bucaramanga; Bogotá).

7: Colombia (Bogotá 7).

*Machaeropterus pyrocephalus (Sclater). FIERY-HEADED MANAKIN.

Pipra pyrocephala Sclater, Rev. Mag. Zool., (2), 4, p. 9, 1852—locality unknown, probably eastern Peru (type in Paris Museum examined); idem, Contrib. Ornith., 1852, p. 132, pl. 97, fig. 1 (fig. of type=male).

Machaeropterus pyrocephalus Sclater, Ibis, 1862, p. 176—Río Ucayali and Río Huallaga, eastern Peru; Pelzeln, Orn. Bras., 2, p. 128, 1868—Engenho do Gama and São Vicente, Rio Guaporé, Matto Grosso (spec. examined); Sclater and Salvin, P Z.S.Lond., 1878, p. 139—Rioja and Moyobamba, Peru; Taczanowski, Orn. Pér., 2, p. 346, 1884—Moyobamba; Sclater, Cat. B. Brit. Mus., 14, p. 305, 1888—Engenho do Gama, Matto Grosso, and Río Ucayali; Berlepsch and Hartert, Nov. Zool., 9, p. 54, 1902—La Pricion, Caura, Venezuela (spec. examined); Hellmayr in Wytsman, Gen. Av., Part 9, p. 11, pl. 3, fig. 5, 1910 (range); Snethlage, Bol. Mus. Goeldi, 8, p. 368, 1914—Boim, Rio Tapajóz; Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 249, 1916—La Pricion, Caura, Venezuela.

Range: Eastern Venezuela (La Pricion, Río Caura); northern Brazil (Boim, Rio Tapajóz, state of Pará; Engenho do Gama and São Vicente, Rio Guaporé, western Matto Grosso); and eastern Peru (Río Ucayali, Rioja, Moyobamba, dept. San Martín; Marcapata Valley, dept. Cuzco).

3: Peru (Moyobamba 3).

Genus ALLOCOTOPTERUS Ridgway.

Allocotopterus RIDGWAY, Proc. Biol. Soc. Wash., 18, p. 209, 1905—type by orig. desig. Pipra deliciosa SCLATER.

Allocopterus Chapman, Bull. Amer. Mus. N.H., 36, p. 482, 1917—emendation.

*Allocotopterus deliciosus (Sclater).2 Club-Winged Manakin.

Pipra deliciosa Sclater, P.Z.S.Lond., 28, p. 90, 1860-Nanegal, Ecuador.

¹I am unable to discover any local variation in this species with the possible exception of the red crown-stripe being somewhat less extensive in males from the Caura Valley.

Material examined.—Peru: Moyobamba 3, Marcapata Valley 1.—Brazil, Matto Grosso: Engenho do Gama 6, São Vicente 3.—Venezuela: La Pricion,

Caura 2.

²The propriety of separating the species generically from *Machaeropterus* may well be questioned, the principal point of distinction—the peculiar structure of

Machaeropterus deliciosus Sclater, Ibis, 1862, p. 176, pl. 6 (crit.); idem, Cat. B. Brit. Mus., 14, p. 305, 1888—Nanegal, Intac, Sical, "Sarayacu," Ecuador; Allen, Bull. Amer. Mus. N.H., 2, p. 73, 1889-Nanegal; HARTERT, Nov. Zool., 5, p. 488, 1898-Cachaví, Ecuador; SALVADORI and FESTA. Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—Gualea and Intac; Good-FELLOW, Ibis, 1901, p. 709-Gualea, Intac, and Mindo; HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 11, pl. 3, fig. 1, 1910—western Ecuador; MÉNÉGAUX, Miss. Serv. Géogr. Armée Mes. Arc Mérid. Equat., o, p. B61, 1911-Pachijal, Esmeraldas; LÖNNBERG, and RENDAHL Ark. Zool., 14, No. 25, p. 75, 1922-Mindo, Gualea.

Allocopterus deliciosus Chapman, Bull. Amer. Mus. N.H., 36, p. 482, 1917-Cocal and Buenavista (Nariño), Colombia.

Allocotopterus deliciosus Chapman, l.c., 55, p. 533, 1926-Mindo and Nanegal, Ecuador.

Range: Lower Subtropical Zone of western Ecuador and southwestern Colombia (state of Nariño).

Ecuador (unspecified 2).

Genus CHLOROPIPO Cabanis and Heine.1

Chloropipo CABANIS and HEINE, Mus. Hein., 2, p. 90, note 2, 1859-type by orig. desig. Chloropibo flavicollis CABANIS and HEINE = Pibra flavicabilla SCLATER.

Chloropipo flavicapilla (Sclater). YELLOW-HEADED MANAKIN.

Pipra flavicapilla SCLATER, Rev. Mag. Zool., (2), 4, p. 9, 1852-"Nouvelle Grenade" = Bogotá (type in Paris Museum examined); idem, Contrib. Ornith., 1852, p. 132, pl. 97, fig. 2-New Granada (type figured); idem, P.Z.S.Lond., 23, p. 152, 1855-Bogotá.

Chloropipo flavicollis (lapsu) CABANIS and HEINE, Mus. Hein., 2, p. 91, 1859 -Colombia (ex SCLATER).

Chloropipo flavicapilla SCLATER, Cat. Coll. Amer. Birds, p. 247, 1862-Bogotá; SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 516-Medellín, Antioquia; SCLATER, Cat. B. Brit. Mus., 14, p. 286, 1888-Bogotá and Medellín, Colombia; HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 12, pl. 1, fig. 4, 1910-Bogotá and Cauca Valley, Colombia; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 483, 1917-San Antonio, Western Andes, Colombia.

Range: Subtropical Zone of Colombia (San Antonio, Primavera, Riolima, Western Andes; Medellín, Central Andes; "Bogotá").2

the inner secondaries—being a purely sexual character of the adult male. However, the comparatively much shorter tail and the more operculate nostrils perhaps justify the recognition of the genus.

Material examined.—Twenty specimens from Western Ecuador.

¹Key to the species; HELLMAYR, Nov. Zool., 13, p. 326, 1906.

²Material examined.—Western Andes: Primavera (adult male) 1; Riolima (female) 1.—Medellín, Antioquia (males) 2.—"Bogotá" 7.

Females and immature birds are less brightly colored, the pileum being duller yellow, and the anterior under parts as well as the sides of the head more strongly suffused with greenish olive.

*Chloropipo holochlora litae Hellmayr. Western Green Manakin.

Chloropipo holochlora litae Hellmayr, Nov. Zool., 13, p. 325, 1906—Lita, prov. Imbabura, Ecuador; idem in Wytsman, Gen. Av., Part 9, p. 12, 1910—northwestern Ecuador and southwestern Colombia ("Pasto in the Cauca Valley"); idem, P.Z.S.Lond., 1911, p. 1138—Sipi and Nóvita, Chocó, Colombia (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 483, 1917—Baudó, San José, and Barbacoas, western Colombia; idem, l.c., 55, p. 533, 1926—eastern Panama to northwestern Ecuador; Griscom, Bull. Mus. Comp. Zool., 69, p. 178, 1929—Cana, Darién.

Chloropipo holochlora Sclater, Cat. B. Brit. Mus., 14, p. 287, 1888—part, spec. b, "vicinity of Pasto," Colombia (spec. examined); Hartert, Nov. Zool., 5, p. 488, 1898—Cachaví and Paramba, Ecuador (spec. examined).

Range: Tropical Zone of the Pacific coast from eastern Panama (Río Tuyra) south to northwestern Ecuador (prov. Esmeraldas and Imbabura).

1: Ecuador (Lita, prov. Imbabura 1).

Chloropipo holochlora holochlora Sclater. GREEN MANAKIN.

Chloropipo holochlora Sclater, Cat. B. Brit. Mus., 14, p. 287, 1888—part, spec. a,c-f, Bogotá (type), Sarayacu, Ecuador, and Chyavetas, Peru (spec. examined); Hellmayr, Nov. Zool., 13, p. 325, 1906—Bogotá to northern Peru (crit.).

Chloropipo sp. ign. Sclater and Salvin, P.Z.S.Lond., 1867, pp. 751, 758—Chyavetas, Peru (spec. examined); idem, l.c., 1873, p. 282—Chyavetas.

Chloropipo flavicapilla (not of SCLATER) TACZANOWSKI and BERLEPSCH, P.Z.S.Lond., 1885, p. 93—Mapoto, Ecuador.²

Chloropipo holochlora holochlora Hellmayr in Wytsman, Gen. Av., Part 9, p. 12, 1910—Bogotá, eastern Ecuador, and northern Peru (Chyavetas); Chapman, Bull. Amer. Mus. N.H., 36, p. 483, 1917—Florencia, Caquetá, and Villavicencio, eastern Colombia; idem, l.c., 55, p. 533, 1926—Zamora, Río Suno, below San José, Ecuador.

Range: Upper Amazonia, from eastern Colombia (Villavicencio; Florencia, Caquetá; Cuembi, Río Putumayo, Nariño) through eastern Ecuador to northern Peru (Chyavetas, dept. Loreto).³

¹Chloropipo holochlora litae HELLMAYR: Similar in size to C. h. holochlora, but upper parts, throat, chest, and sides light olivaceous green instead of shining grass-green.

Material examined.—N. W. Ecuador (Cachaví, Lita, Paramba, Ventanas, Cachyiacú) 20.—Colombia: Sipi, Río Sipi 2; Nóvita, Río Tamaná 1; "Pasto" 1.

 2 Count Berlepsch's MS. notes, now in my possession, clearly show that the Mapoto specimen is referable to $C.\ h.\ holochlora.$

⁸Birds from eastern Ecuador and a single skin from Chyavetas are identical with Colombian specimens.

Material examined.—Colombia: Bogotá (including the type) 3; Cuembi, Río Putumayo I.—Ecuador: Sarayacu 2, Río Napo I.—Peru: Chyavetas I.

Chloropipo holochlora viridior Chapman. South Peruvian Green Manakin.

Chloropipo holochlora viridior Chapman, Amer. Mus. Novit., 138, p. 5, 1924— La Pampa (type) and Río Tavara, southeastern Peru.

Chloropipo holochlora holochlora (not of SCLATER) HELLMAYR, Arch. Naturg., 85, A, Heft 10, p. 60, 1920—Yahuarmayo, Carabaya (crit.).

Range: Southeastern Peru, in northern section of dept. Puno (La Pampa, Río Tavara, and Yahuarmayo, northern slope of the Sierra de Carabaya).

Chloropipo uniformis Salvin and Godman.² RORAIMA GREEN MAN-AKIN.

Chloropipo uniformis Salvin and Godman, Ibis, (5), 2, p. 447, 1884—Roraima; Salvin, l.c., 1885, p. 299—Merumé Mountains and Roraima; idem, l.c., 1886, p. 500—Mount Twek-quay; Sclater, Cat. B. Brit. Mus., 14, p. 286, 1888—Roraima, Merumé and Twek-quey mountains; Hellmayr in Wytsman, Gen. Av., Part 9, p. 12, 1910—mountains of British Guiana; Chubb, Birds Brit. Guiana, 2, p. 250, 1921—Roraima, Merumé, Twek-quey, "Kamarang" [=Caramang] River.

Range: Mountains of the interior of British Guiana.

Chloropipo unicolor Taczanowski.3 Taczanowski's Manakin.

¹Chloropipo holochlora viridior Chapman: Very close to C. h. holochlora, but upper parts of a fresher, more yellowish (moss) green; throat and chest also rather lighter; abdomen deeper yellow. Wing (two females) 72, 73; tail 46, 47.

Material examined .- Peru: Yahuarmayo I, Río Tavara I.

²Chloropipo uniformis Salvin and Godman: Not unlike C. holochlora litae, but larger, and tail notably much longer; axillars and under wing coverts pale yellowish, scarcely tinged with grayish in the middle; throat and chest darker olive green, etc. Wing 80, (female) 77-79; tail 55-58, (female) 53-55.

Material examined.—British Guiana: Roraima 6.

³Chloropipo unicolor Taczanowski: Adult male glossy black, with wings and under wing coverts dull brownish black; axillars and a tuft of elongated silky feathers on sides of chest snowy white; bill black. Female much like C. uniformis, but smaller; upper parts much darker green, inclining to blackish green on pileum; ventral surface duller, more suffused with grayish, and a large tuft of silky white feathers under the wings; bill dark brown, beneath brownish white. Wing 75 (male), 72-75½ (females); tail 51 (male), 49-50½ (females); bill 12-13.

This species is almost certainly generically distinct from *Chloropipo*. Aside from the marked sexual dimorphism and the glossy black coloring of the male, which remind one of *Xenopipo*, it, furthermore, differs from the genotype and allied species by having a much smaller, slenderer bill with strongly ridged culmen, while the elongated plumes on the sides of the chest form another peculiar feature. Unfortunately, no specimen is at present available for reexamination of its structural characters.

Material examined.—Peru, dept. Junín: Amable María, alt. 2000 ft. (the type) I (female); Garita del Sol, alt. 5740 ft., I (female).—San Martín: Guayabamba [=Huayabamba], alt. 4000 to 5500 ft., (types of X. subalaris) 2 (male, female).

46 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

- Chloropipo unicolor Taczanowski, Orn. Pér., 2, p. 335, 1884—Amable María, near Tulumayo River, dept. Junín, Peru (type in Warsaw Museum examined; =female); Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 368—Garita del Sol, Vitoc, Peru (crit.); Hellmayr in Wytsman, Gen. Av., Part 9, p. 12, 1910—Peru.
- Xenopipo subalaris Godman, Bull. Brit. Orn. Cl., 10, p. XXVII, 1899—Guayabamba [=Huayabamba], dept. San Martín (descr. of male and female; types in British Museum examined); Hellmayr, Nov. Zool., 13, p. 324, 1906—Peru (crit.).

Range: Tropical Zone of Peru, in depts. Junín (Amable María, Garita del Sol) and San Martín (Huayabamba), at altitudes of from 2000 to 5700 feet.

Genus CERATOPIPRA Bonaparte.

Ceratopipra Bonaparte, Ateneo Italiano, 2, No. 11, p. 316 (=Consp. Voluc. Anisod., p. 6), 1854—type by monotypy Pipra cornuta Spix.

Ceratopipra cornuta (Spix). Crested Manakin.

- Pipra cornuta Spix, Av. Bras., 2, p. 5, pl. 7, fig. 2, 1825—"in sylvis flum. Amazonum" (type lost, formerly in Munich Museum); Wagler, Isis, 1830, p. 933 (descr. of type); Schomburgk, Reisen Brit. Guiana, 2, p. 245, 1848—Our Village, Kukenam Valley, dist. Yuruari; Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 696, 1848—Roraima; Burmeister, Syst. Übers. Th. Bras., 2, p. 444, 1856—Amazon River and British Guiana; Bates, Naturalist on the Amazons, 1, p. 254, 1863—Obidos; Pelzeln, Orn. Bras., 2, p. 127, 1868—Rio Marou, Brazil; Taczanowski, Orn. Pér., 2, p. 337, 1884—part, descr. of male and female, British Guiana; Salvin, Ibis, 1885, p. 299—Roraima.
- Pipra iracunda Salvin and Godman, Ibis, (5), 2, p. 447, 1884—Roraima, British Guiana (type examined); Salvin, l.c., 1885, p. 229—Roraima.
- Ceratopipra cornuta SCLATER, Cat. B. Brit. Mus., 14, p. 288, 1888—Roraima, British Guiana; Hellmayr in Wytsman, Gen. Av., Part 9, p. 14, pl. 3, fig. 3, 1910—British Guiana and Lower Amazonia; Chubb, Birds Brit. Guiana, 2, p. 253, 1921—Roraima.
- Ceratopipra iracunda Sclater, Cat. B. Brit. Mus., 14, p. 288, pl. 19, 1888—part, spec. a, Roraima; Hellmayr in Wytsman, Gen. Av., Part 9, p. 14, 1910—Roraima; Chubb, Birds Brit. Guiana, 2, p. 254, 1921—Roraima.

Range: Eastern Venezuela (El Llagual, Caura River; Kukenam Valley, dist. Yuruari); British Guiana (Roraima); northern Brazil (Rio Marou, tributary of the Rio Negro; Obidos, north bank of lower Amazon).¹

¹Two males from the Rio Marou, Brazil, in the Vienna Museum and a female taken by M. A. Carriker, Jr., on January 11, 1910, at El Llagual, Caura, Venezuela (Carnegie Museum, No. 33294) agree with others from British Guiana. An example with only a small yellowish-red chin spot and the rest of the throat black like the belly was described as *P. iracunda*. The type specimen, obtained

Genus XENOPIPO Cabanis.

Xenopipo Cabanis, Arch. Naturg., 13, (1), p. 235, 1847—type by orig. desig. Xenopipo atronitens Cabanis.

*Xenopipo atronitens Cabanis. BLACK MANAKIN.

Xenopipo atronitens Cabanis, Arch. Naturg., 13, (1), p. 235, 1847—British Guiana; idem in Schomburgk, Reisen Brit. Guiana, 3, p. 697, 1848—coast forests of British Guiana; Pelzeln, Orn. Bras., 2, p. 129, 1868—Forte do São Joaquim (Rio Branco), Rio Içanna (Rio Negro), and Borba, Rio Madeira (spec. examined); Salvin, Ibis, 1885, p. 299—Merumé Mts. and Mount Roraima, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 287, 1888—Merumé Mts. and Demerara (British Guiana), Oyapoc ("Cayenne"), Rio Negro, Rio Içanna, and Borba; Berlepsch, Nov. Zool., 15, p. 136, 1908—Oyapock; Hellmayr, l.c., 17, p. 308, 1910—Borba, Rio Madeira; idem in Wytsman, Gen. Av., Part 9, p. 15, pl. 3, fig. 2, 1910 (range); Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 73, 1918—Lelydorp, Surinam; Chubb, Birds Brit. Guiana, 2, p. 255, 1921—Berbice River, Abary River, Merumé Mts., and Mount Roraima.

Range: British, Dutch, and French Guiana; northern Brazil (Rio Negro; Rio Branco; Borba, Rio Madeira).

1: Brazil (Manáos 1).

Genus TYRANNEUTES Sclater and Salvin.2

Tyranneutes Sclater and Salvin, Ibis, (4), 5, p. 268, 1881—type by monotypy Tyranneutes brachyurus Sclater and Salvin=Pipra virescens Pelzeln.

*Tyranneutes virescens (Pelzeln).3 OLIVE-GREEN MANAKIN.

by the late H. Whitely, Jr., on Mount Roraima, at an altitude of 3500 feet, on June 20, 1883, along with normally-colored males, is certainly but an individual variant of *C. cornuta*.

Material examined.—British Guiana: Roraima 10.—Venezuela: El Llagual, Caura 1.—Brazil: Rio Marou, Rio Negro district 2.

¹Material examined.—British Guiana: Rupununi River 3, Merumé Mountains 2.—Brazil: Manáos 1; Forte do São Joaquim, Rio Branco 2; Rio Içanna [=Rio Isana] 2; Borba, Rio Madeira 1.

²The exceedingly short secondaries and tarsi, together with the delicate toes and relatively large bill, seem to be excellent characters for generic separation. The sexes are alike in coloration and structure.

³Tyranneutes virescens (Pelzeln) is characterized by the large (half-concealed) bright yellow crown patch and by the outermost rectrix being extremely narrowed and shortened, only about half as long as tail, with rigid shaft. Wing 47-51; tail 19-23; bill 9-10.

Birds from British Guiana (brachyurus) differ from the type by having less extensive as well as darker, golden yellow rather than lemon yellow, crown patch.

Material examined.—Brazil: Manáos (the type) 1.—British Guiana: Camacusa 8, Bartica Grove 3, Caramang River 2.

Pibra virescens Pelzeln, Orn. Bras., 2, pp. 128, 187, Sept., 1868-part, descr. of adult male only from Barra do Rio Negro [= Manáos], Brazil (type in Vienna Museum examined); SALVIN and GODMAN, Ibis, 1883, p. 208 (crit.); SALVIN, l.c., 1885, p. 300—Camacusa, British Guiana; HELLMAYR, Ibis, 1906, p. 42-Manáos, Brazil, and British Guiana (monog.); idem in WYTSMAN, Gen. Av., Part 9, p. 9, 1910-range; SNETH-LAGE, Bol. Mus. Goeldi, 8, p. 367, 1914—Obidos and Rio Jamundá (Faro), Brazil; BEEBE, Trop. Wild Life in Brit. Guiana, 1, p. 134, 1917—Bartica Grove; CHUBB, Birds Brit. Guiana, 2, p. 248, 1921-British Guiana (numerous localities).

Tyranneutes brachyurus Sclater and Salvin, Ibis, (4), 5, p. 269, 1881-Bartica Grove, British Guiana (type examined).

[Pibra virescens] Subsp. brachyura SCLATER, Cat. B. Brit. Mus., 14, p. 303, 1888-Bartica Grove, Camacusa, and Carimang River, British Guiana (spec. examined).

Pipra brachyura Beebe, Our Search for a Wilderness, pp. 342, 348, 392, 1910-Aremu, British Guiana (habits).

Range: British Guiana, and northern Brazil, north of the Amazon (Obidos: Rio Jamundá, Faro: Manáos).

British Guiana (Camacusa 1).

*Tyranneutes stolzmanni (Hellmayr). Stolzmann's Manakin.

Pipra stolzmanni HELLMAYR, Ibis, (8), 6, p. 44, 1906—Marabitanas, Rio Negro, Brazil (monog., range); idem, Nov. Zool., 14, p. 360, 1907-Paraíso and Borba, Rio Madeira; idem, l.c., 17, p. 308, 1910-Maroins, Rio Machados; idem in WYTSMAN, Gen. Av., Part 9, p. 9, 1910 (range); idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 30, 90, 1912-Peixe-Boi, Pará; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 367, 1914-Pará, Providencia, Ananindeua, Rio Tocantins (Cametá), Cussary, Rio Jamauchim (Tucunaré), and Rio Tapajóz (Boim), Brazil; Bond, Auk, 44, p. 563, 1927—"Patagonia," forty miles east of Pará; STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 167, 1928—Castanhal, Pará.

Pipra virescens Pelzeln, Orn. Bras., 2, pp. 128, 187, 1868—part, descr. of female and young male, Borba, Rio Madeira and Marabitanas, Rio Negro (spec examined); SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 283-Xeberos, Chyavetas, and Chamicuros, Peru (spec. examined); TACZA-NOWSKI, l.c., 1882, p. 23-Yurimaguas; idem, Orn. Pér., 2, p. 345, 1884-

¹Tyranneutes stolzmanni (HELLMAYR): Similar to T. virescens, but without yellow crown patch or with mere traces of pale yellow at the extreme base of a few feathers; outermost rectrix of normal shape, neither narrowed nor abbreviated, and but slightly shorter than the median; subexternal rectrix as a rule from two to four millimeters shorter than the outermost and third pairs.

Material examined.—Venezuela: Nericagua, Orinoco 2; Suapure, Caura River I.—Colombia: Villavicencio I, "Bogotá" 15.—Ecuador: Santiago I, Sarayacu 2, Río Napo 2.—Peru: Yurimaguas I, Xeberos 2, Chamicuros 2, Chyavetas I, Puerto Bermúdez I.—Brazil: Marabitanas, Rio Negro 2; Borba, Rio Madeira 5; Paraíso, Rio Madeira 2; Maroins, Rio Machados 1; Pará 1; Peixe-Boi,

near Belém 3.

Yurimaguas; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 14, 1899—Santiago, Ecuador (spec. examined); Berlepsch and Hartert, Nov. Zool., 9, p. 53, 1902—Nericagua, Orinoco River, and Suapure, Caura, Venezuela (spec. examined); Ihering and Ihering, Cat. Faun. Braz., 1, p. 300, 1907—Bogotá (range in part).

Pipra sp. ign. Sclater and Salvin, P.Z.S.Lond., 1867, p. 751—Xeberos and Chyavetas, Peru (spec. examined).

Pipra virescens Subsp. typica Sclater, Cat. B. Brit. Mus., 14, p. 303, 1888
—"Rio Negro" [= Marabitanas], Xeberos, Chamicuros, Chyavetas,
Sarayacu (Ecuador), and Bogotá.

"Pipra virescens an P. stolzmanni" (sic) SNETHLAGE, Journ. Orn., 55, p. 289, 1907—Pará (spec. examined).

Tyranneutes stolzmanni Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 248, 1916—Nericagua, Orinoco, and Caura River, Venezuela; Chapman, Bull. Amer. Mus. N.H., 55, p. 532, 1926—Zamora, Río Suno, and below San José, Ecuador, and Río Tavara, Peru.

Range: Amazonian region, from southern Venezuela (Orinoco-Caura basin) and eastern Colombia (Villavicencio) south through eastern Ecuador and northwestern Brazil (Marabitanas, upper Rio Negro) to southeastern Peru (Río Tavara, Carabaya), and along the south bank of the Amazon through northern Brazil east to the Pará district.

2: Peru (Puerto Bermúdez, Río Pichis, Ucayali drainage basin, dept. Junín 1); Colombia (Bogotá 1).

Genus MASIUS Bonaparte.

Masius Bonaparte, Consp. Av., 1, p. 175, 1850—type by monotypy Pipra chrysoptera Lafresnaye.

Anticorys Cabanis and Heine, Mus. Hein., 2, p. 90, 1859—new name for Masius Bonaparte.

*Masius chrysopterus chrysopterus (Lafresnaye). Golden-winged Manakin.

Pipra chrysoptera Lafresnaye, Rev. Zool., 6, p. 97, 1843—Santa Fé de Bogotá; idem, Mag. Zool., (2), 5, pl. 44, 1843—same locality; Gray and Mitchell, Gen. Birds, 1, p. 274, pl. 67 (upper figure), 1846.

Masius chrysoptera Bonaparte, Consp. Av., 1, p. 175, 1850-Colombia.

Masius chrysopterus Sclater, P.Z.S.Lond., 23, p. 152, 1855—Bogotá; Taczanowski and Berlepsch, l.c., 1885, p. 93—Mapoto, Ecuador; Pelzeln, Madarász and Lorenz, Monog. Pipridae, p. 11, pl. 4, 1887—Bogotá and eastern Ecuador (monog.); Berlepsch, Zeits. Ges. Orn., 4, p. 184, 1887—Bogotá; Sclater, Cat. B. Brit. Mus., 14, p. 291, 1888—Bogotá; Goodfellow, Ibis, 1901, p. 708—Baeza, Ecuador (spec. examined); Chapman,

Bull. Amer. Mus. N.H., 36, p. 483, 1917—La Candela (east slope of Central Andes, head of Magdalena Valley), Fusugasugá, and Aguadita, Eastern Andes, Colombia; idem, l.c., 55, p. 534, 1926—Macas, lower Sumaco, San José de Sumaco, Baeza, and below Oyacachi, eastern Ecuador.

Masius chrysopierus chrysopierus Hartert and Hellmayr, Ornith. Monatsber., 11, p. 33, 1903—Eastern Andes of Colombia and Ecuador (crit.); Hellmayr in Wytsman, Gen. Av., Part 9, p. 16, 1910 (range).

Range: Northwestern Venezuela (Guárico, state of Lara); eastern Colombia (Eastern Andes, and east slope of Central Andes at the head of the Magdalena Valley); eastern Ecuador.¹

5: Colombia (Bogotá 5).

*Masius chrysopterus coronulatus Sclater. Coronated Manakin.

Masius coronulatus Sclater, P.Z.S.Lond., 28, p. 91, 1860—Nanegal, Ecuador (type examined); idem, Cat. Coll. Amer. Birds, p. 247, pl. 19, 1862—Nanegal; Pelzeln, Madarász and Lorenz, Monog. Pipr., p. 13, 1887—part, hab. Ecuador only; Sclater, Cat. B. Brit. Mus., 14, p. 291, 1888—part, spec. a-i, Nanegal, "Sarayacu," Intac, and "Quito," Ecuador; Allen, Bull. Amer. Mus. N.H., 2, p. 72, 1889—Nanegal; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 14, 1899—Gualea and Intac; Goodfellow, Ibis, 1901, p. 708—Canzacota, Gualea, and Intac; Ménégaux, Miss. Serv. Géog. Armée Mes. Arc Mérid. Equat., 9, p. B60, 1911—"Quito," Gualea; Lönnberg and Rendahl, Ark. Zool., 14, No. 25, p. 75, 1922—Gualea and Nanegal; Chapman, Bull. Amer. Mus. N.H., 55, p. 534, 1926—Nanegal, Gualea, Las Piñas, and Alamor.

Masius chrysopterus coronulatus Hartert and Hellmayr, Ornith. Monatsber., 11, p. 34, 1903—western Ecuador (crit.); Hellmayr in Wytsman, Gen. Av., Part 9, p. 16, 1910—western Ecuador.

Masius corunulatus Chapman, Bull. Amer. Mus. N.H., 36, p. 484, 1917—part, Gallera (west of Popayán) and Buenavista, Nariño, Colombia.

Range: Western Ecuador and southwestern Colombia (north to Gallera, west of Popayán).²

5: Ecuador (Gualea 2, Pachajal 1, Ana María 1, "Quito" 1).

¹The tips of the crest feathers vary from orange chrome to grenadine red in Bogotá skins. Three males from Baeza (Ecuador) are of the dark-crested type, while a single male from Guárico (Venezuela) agrees with the average from Bogotá in having the tips flame-scarlet.

Material examined.—Colombia: Bogotá 27.—Ecuador: Baeza 4.—Venezuela: Guárico, Lara (Carnegie Museum, No. 36888. & ad., Feb. 10, 1911. M. A. Carriker, Jr.) 1.

²Two (out of three) adult males from Gallera (Andes west of Popayán, Cauca) are indistinguishable from topotypes, while the third specimen, like one from Gualea, closely approaches certain individuals of *M. c. bellus*.

Material examined.—Pachajal 1, Ana María 1—Colombia: Gallera 3.— Ecuador: Gualea 6, Nanegal 3, Intac 4, Canzacota 2, "Sarayacu" 2, unspecified 4.

Masius chrysopterus bellus Hartert and Hellmayr. BEAUTIFUL MANAKIN.

Masius chrysopterus bellus HARTERT and HELLMAYR, Ornith. Monatsber., 11, p. 35, 1903-Riolima, Cauca, Colombia; HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 16, 1910—western Colombia; idem, P.Z.S.Lond., 1911, p. 1138-Pueblo Rico, San Juan slopes, Colombia.

Masius coronulatus (not of SCLATER) SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 516—Antioquia [= Medellín] (spec. examined); Pelzeln, Mada-RÁSZ and LORENZ, Monog. Pipr., p. 13, pl. 5, 1887—part, descr. and hab. Medellín, Colombia; Sclater, Cat. B. Brit. Mus., 14, p. 291, 1888—part, spec. j, Antioquia.

Masius corunulatus Chapman, Bull. Amer. Mus. N.H., 36, p. 484, 1917part, Las Lomitas, San Antonio, Cocal (Western Andes), and La Frijolera, lower Cauca, Colombia.

Range: Western Andes of Colombia (except the extreme southerly section).

Genus ANTILOPHIA Reichenbach

Metopia (not of MEIGEN, 1803) SWAINSON in RICHARDSON, Faun. Bor.-Amer., 2, p. 491, Feb., 1832—type by orig. desig. Pipra galeata LICHTENSTEIN.

Antilophia REICHENBACH, Av. Syst. Nat., pl. 63, 1850-type Pipra galeata LICHTENSTEIN.

*Antilophia galeata (Lichtenstein). Helmeted Manakin.

Pipra galeata LICHTENSTEIN, Verz. Dubl. Berliner Mus., p. 28, 1823-São Paulo, Brazil (type in Berlin Museum examined); SWAINSON, Orn. Draw., Part 2, pl. 23, 1834 (=adult male).

Pipra wiedii Lesson, Traité d'Orn., livr. 4, p. 258, Sept., 1830-no locality given.

Metobia galeata Burmeister, Syst. Übers. Th. Bras., 2, p. 440, 1856—Lagôa Santa, Minas Geraes; Pelzeln, Orn. Bras., 2, p. 129, 1868-Borda do Matto, Irisanga, Paciencia, Rio Paraná, and Rio das Pedras (São Paulo), José Dias and Goyaz (Goyaz), and São Vicente, Matto Grosso (spec. examined); Reinhardt, Vidensk. Medd. Naturhist. Foren., 1870, p. 318-Lagôa Santa, Sete Lagôas, and Curvelo, Minas Geraes, and Villa Franca.

1 Masius chrysopterus bellus HARTERT and HELLMAYR: Similar to M. c. coronulatus, but the thick flattened horny ends of the crest english red (instead of tobacco brown, glossed with golden brown apically). Wing (adult males) 58-60; tail 41-43; bill 7-8.

Seven adult males from the central and northern parts of the Western Andes differ noticeably from a series of Ecuadorian skins. However, one from the Heights of Caldas, Valle, and another from Las Lomitas, Cauca, have the tips of the crest feathers decidedly duller and more tinged with brownish, and can hardly be distinguished from certain dark-crested examples of coronulatus.

Material examined.—Medellín, Antioquia 1; Pueblo Rico, San Juan slopes, Chocó 1; Bitaco Valley, Valle 3; La Cumbre, Valle 1; Heights of Caldas, Valle 1; Riolima, Cauca (the type) 1; Las Lomitas, Cauca 1.

northeastern São Paulo; SCLATER, Cat. B. Brit. Mus., 14, p. 290, 1888part, spec. a-h, Bahia, "Rio," Brazil; ALLEN, Bull. Amer Mus. N.H., 5, p. 107, 1893-Chapada, Matto Grosso.

Antilophia galeata IHERING, Rev. Mus. Paul., 5, p. 298, 1902-Batataes, São Paulo (nest descr.); IHERING and IHERING, Cat. Faun. Braz., 1, p. 298, 1907-Batataes, Franca, and Avanhandava (São Paulo), Chapada and Porto do Faya (Matto Grosso); HELLMAYR, Nov. Zool., 15, p. 55, 1908 -Goyaz and Fazenda Esperança, Goyaz; idem in Wytsman, Gen. Av., Part 9, p. 17, pl. 2, figs. 5, 6, 1910 (range); Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 76, 1910; p. 166, 1925-Santa Philomena, Piauhy (spec. examined).

Range: Table-land of central Brazil, from northern São Paulo and Matto Grosso north through western Minas Geraes, western Bahia, and Govaz to southern Maranhão and Piauhy (Santa Philomena).1

7: Brazil (Rio das Velhas, near Lagôa Santa, Minas Geraes 3: Chapada, Matto Grosso 4).

Genus CHIROXIPHIA Cabanis.2

- Chiroxiphia Cabanis, Arch. Naturg., 13, (1), p. 235, 1847—type by subs. desig. (Gray, 1855, p. 55) Pipra caudata SHAW.
- Chiroprion (SCHIFF MS.)3 BONAPARTE, Ateneo Italiano, 2, No. 11, p. 315 (=Consp. Voluc. Anisod., p. 5), 1854—type by monotypy Pipra pareola LINNAEUS.
- Cercophaena (SCHIFF MS.) BONAPARTE, Ateneo Italiano, 2, No. 11, p. 316 (=Consp. Voluc. Anisod., p. 6), 1854-type by monotypy Pipra linearis BONAPARTE.

*Chiroxiphia linearis (Bonaparte). Long-tailed Manakin.

- Pipra linearis Bonaparte, P.Z.S.Lond., 5, "1837," p. 113, June, 1838-Mexico; Gould in HINDS, Zool. Voy. Sulphur, Birds, p. 40, pl. 20 (male), 1843-Realejo, Nicaragua.
- Pipra fastuosa Lesson, Rev. Zool., 5, p. 174, 1842-Realejo, Nicaragua; idem, Echo du Monde Savant, 10, No. 40, p. 947, 1843-Realejo.
- Chiroxiphia linearis Sclater, Cat. B. Brit. Mus., 14, p. 309, 1888-Guatemala to Costa Rica; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2,

Forty-six specimens, including a female from Santa Philomena, Piauhy, examined.

2See W. DEW. MILLER, A Review of the Manakins of the Genus Chiroxiphia; Bull. Amer. Mus. Nat. Hist., 24, pp. 331-344, 1908.

³Separation of the genus *Chiroprion* seems impracticable (see MILLER, l.c., p. 341).

⁴C. linearis and C. lanceolata should probably be looked upon as geographic races of C. pareola with strongly pronounced characters.

p. 112, 1890—Mexico to Costa Rica; Bangs, Auk, 24, p. 303, 1907—Paso Real and Barranca de Térraba, Costa Rica; Miller, Bull. Amer. Mus. Nat. Hist., 24, p. 332, 1908—southern Mexico to Costa Rica (crit.;) Hellmayr in Wytsman, Gen. Av., Part 9, p. 19, pl. 2, fig. 9, 1910—southern Mexico to Costa Rica.

Chiroprion linearis RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 739, 1907—southern Mexico to Costa Rica (monog., full bibliography); DEARBORN, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 101, 1907—Mazatenango and Patulul, Guatemala; CARRIKER, Ann. Carnegie Mus., 6, p. 682, 1910—Pacific slope of Costa Rica (habits).

Chiroprion linearis linearis Bangs and Peters, Bull. Mus. Comp. Zool., 68, p. 397, 1928—Chivela and Tapanatepec, Oaxaca.

Range: Southern Mexico (in states of Oaxaca and Chiapas) south through Guatemala, San Salvador, and Nicaragua to the Pacific slope of Costa Rica.¹

34: Guatemala (Mazatenango 2, near Patulul, Sololá 7); San Salvador (unspecified 1); Nicaragua (San Gerónimo, Chinandega 22); Costa Rica (Bebedero 1, Bolson 1).

*Chiroxiphia lanceolata (Wagler). LANCE-TAILED MANAKIN.

Pipra lanceolata WAGLER, Isis, 1830, p. 931—"Guiana sive Cajenna," errore (type in Munich Museum examined).

Pipra pareolides d'Orbigny and Lafresnaye, Rev. Zool., 1, p. 165, 1838—Carthagena, Colombia.

Pipra pareola (not of LINNAEUS) HAHN, Võgel aus Asien, etc., Lief. 16, pl. 4 (male), 1829—"Brazil, Cayenne, Cuba," errore; Lesson, Traité d'Orn., livr. 4, p. 257, pl. 51, fig. 1 (male), Sept., 1830—"Brésil."

Pipra melanocephala (not of Vieillot, 1820) Bonaparte, P.Z.S.Lond., 5, "1837," p. 113, 1838 (crit.).

Naturg., 78, A, Heft 5, p. 86, 1912-Campanero and San Esteban, Venezuela; STONE, Proc. Ac. Nat. Sci. Phila., 65, p. 206, 1913—Cariaquito, Paría Peninsula, Venezuela; Todd and Carriker, Ann. Carnegie Mus., 14, p. 334, 1922—Fundación, Bonda, Minca, Cacagualito, Mamatoco, and La Tigrera, Santa Marta region; HALLINAN, Auk, 41, p. 319, 1924-Sosa Hill, Río Algarrobo, and Río Velasquez, Panama (nest and eggs descr.).

Chiroxiphia caudata (not Pipra caudata SHAW) LAWRENCE, Ann Lyc. Nat. Hist. N.Y., 7, p. 296, 1862—line of Panama Railroad.

Chiroprion lanceolata RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 737, 1907—Panama, Colombia, Venezuela, and "Trinidad" (monog.); Cory, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 246, 1909—Margarita Island; RENDAHL, Ark. Zool., 12, No. 8, p. 23, 1919—Cerro de Ancón, Panama.

Range: Panama, west to Chiriquí, including Coiba Island; northern Colombia (Sabanilla; Cartagena; Santa Marta region, south to Santander and Bogotá), and northern coast of Venezuela as far east as the Paría Peninsula, state of Sucre.¹

23: Colombia (El Guayabal, ten miles north of San José de Cúcuta, Santander 3); Venezuela (San Esteban 1; Macuto, Caracas 1; Margarita Island 18).

*Chiroxiphia pareola atlantica Dalmas.2 Tobago Manakin.

¹Venezuelan specimens average slightly duller, less blackish underneath, but the divergency is insignificant. There is no reliable record of its occurrence in Trinidad, although trade skins are sometimes—no doubt erroneously—labeled as coming from that island.

Material examined.—Panama (Chiriquí and Railroad line) 8.—Colombia: Cartagena 2; Bonda, Santa Marta 5; Bogotá 3; El Guayabal 3.—Venezuela: San Esteban 8; Campanero 2; Macuto, Caracas 1; Cumanacoa, Bermúdez (now Sucre) 6; Guiria, Paría Peninsula 4; Margarita Island 18.

²Chiroxiphia pareola atlantica DALMAS: Similar to C. p. pareola, but decidedly larger; red crest of adult males fuller and longer; female somewhat lighter, particu-

Chiroxiphia pareola atlantica Dalmas, Mém. Soc. Zool. France, 13, p. 139, 1900—Tobago; Hellmayr in Wytsman, Gen. Av., Part 9, p. 19, 1910—Tobago.

Melopia pareola (not Pipra pareola LINNAEUS) JARDINE, Ann. Mag. Nat. Hist., 20, p. 332, 1847—Tobago.

Chiroxiphia pareola Sclater, Cat. B. Brit. Mus., 14, p. 307, 1888—part, spec. g, Tobago; Cory, Auk, 10, p. 220, 1893—Tobago.

Chiroxiphia atlantica MILLER, Bull. Amer. Mus. N.H., 24, p. 336, 1908—Tobago (crit.).

Range: Island of Tobago.

40: Tobago Island.

*Chiroxiphia pareola pareola (Linnaeus). Blue-Backed Manakin.

Pipra pareola Linnaeus, Syst. Nat., 12th ed., 1, p. 339, 1766—based on Brisson, Edwards, and Marcgrave, "Brasilia et Cayana"; Desmarest, Hist. Nat. Tang., Manak. et Todiers, livr. 4, pl. 50 (adult male), 51, 52 (young males), 1805; livr. 8, pl. 53 (female), 1806—"Brésil et Caienne" (descr. of plumages); Wied, Reise Bras., 1, p. 187 (8vo ed., p. 184), 1820—Barra do Jucú, Espirito Santo; idem, Beitr. Naturg. Bras., 3, (1), p. 418, 1831—Espirito Santo and Mucuri River; Swainson, Ornith. Draw., Part 4, pl. 44 (male, female), 1836 (?); Burmeister, Syst. Übers. Th. Bras., 2, p. 442, 1856—Bahia to Guyana.

Manacus superbus PALLAS, Spicil. Zool., fasc. 6, p. 8, pl. 3 fig. 1, 1769—Surinam.

Pipra plumata P. L. S. MÜLLER, Natursyst., Suppl., p. 177, 1776—based on DAUBENTON, Pl. Enl. 303, fig. 2 (=young male), Cayenne.

Pipra aegithalodes A. H. LICHTENSTEIN, Cat. Rer. Nat. Rar., p. 52, 1793—based on Daubenton, Pl. Enl. 303, fig. 2, Cayenne.

Chiroxiphia pareola Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 695, 1848—Rupununi River; Sclater and Salvin, P.Z.S.Lond., 1867, p. 580—Pará; Pelzeln, Orn. Bras., 2, p. 129, 1868—Forte do Rio Branco and Pará; Layard, Ibis, 1873, p. 384—Pará; Forbes, l.c., 1881, p. 344—Parahyba; Salvin, l.c., 1885, p. 300—British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 307, 1888—part, spec. a-f,h,i,l-v, British Guiana, Cayenne, Demerara, Pernambuco, Bahia, "Novo" Friburgo, "Rio Claro, Goyaz," Brazil; Riker and Chapman, Auk, 8, p. 25, 1891—Santarém; Ihering, Rev. Mus. Paul., 4, p. 156, 1900—Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 300, 1907—Bahia and Santarém; Snethlage, Journ, Orn., 55, p. 289, 1907—Pará, Santo Antonio do Prata, Ourém (Rio Guamá), Marajó, Monte Alegre, Maranhão; Berlepsch, Nov. Zool., 15, p. 138,

larly more yellowish along the abdominal line. Wing 76-80, (female) 75-78; tail 39-42, (female) 41-44.

This well-marked insular race is peculiar to Tobago. The original description is confused as regards the coloration of the female, and also disfigured by a misprint in the tail measurement which should read 42 instead of 52 mm.

Material examined.—Tobago 70.

1908—Cayenne and Roche-Marie, French Guiana; MILLER, Bull. Amer. Mus. N.H., 24, p. 337, 1908 (crit.); SNETHLAGE, Bol. Mus. Goeldi, 8, p. 369, 1914—Pará, Providencia, Ilha das Onças, Quatipurú, Santo Antonio do Prata, Rio Guamá (Ourém), Rio Tocantins (Mazagão, Cametá, Baião, Arumatheua), Rio Tapajóz (Santarém, (?) Boim), Marajó (Soure, Sant' Anna), Monte Alegre, Serra de Paituna, Maranhão; LIMA, Rev. Mus. Paul., 12, (2), p. 100, 1920—Ilhéos to Belmonte, Bahia; Chubb, Birds Brit. Guiana, 2, p. 256, 1921—Upper Takutú Mts., Mazaruni River, Abary River, Annai; Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 100, 1910; p. 166, 1925—Miritiba, Maranhão; SNETHLAGE, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 63, 1926—Anil and Tury-assú, Maranhão.

Chiroxiphia longicauda (not Pipra longicauda VIEILLOT) CABANIS in SCHOMBURGK, Reisen Brit. Guiana, 3, p. 695, 1848—"British Guiana" (ex SWAINSON MS.), errore; see HELLMAYR, Verh. Orn. Ges. Bay., 14, p. 273, 1920.

Chiroprion pareola Bonaparte, Bull. Soc. Linn. Normandie, 2, p. 37, 1857 —Cayenne.

Chiroxiphia pareola pareola Hellmayr, Nov. Zool., 13, p. 363, 1906—Santo Antonio do Prata, Pará; idem, l.c., 14, p. 31, 1907—Obidos; idem in Wytsman, Gen. Av., Part 9, p. 18, 1910 (range); idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 31, 90, 1912—Ipitinga, Rio Acará, and Pará localities; Beebe, Zoologica (N.Y.), 2, p. 92, 1916—Utinga, Pará; Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 167, 1928—Rio Capim, Rio Inhangapy, Pará; Hellmayr, Field Mus. Nat. Hist., Zool. Ser., 12, p. 334, 1929—Maranhão.

Chiroprion pareola pareola BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 73, 1918—Paramaribo, Surinam.

Range: French, Dutch, and British Guiana; northern and eastern Brazil, on the north bank of the Amazon west to the Rio Branco, south of the river to the right bank of the Tapajóz, and extending along the east coast as far south as Espirito Santo and Rio de Janeiro.¹

18: French Guiana (Cayenne 1); Dutch Guiana (vicinity of Paramaribo 1); Brazil, Amazonas (Serra Grande, Rio Branco 1,

¹The locality "Rio Claro, Goyaz" is no doubt erroneous, and it is also questionable whether the species is of regular occurrence in the vicinity of Rio de Janeiro. It is, however, common along the coast of Bahia and Espirito Santo, specimens from the former state being, so far as I can see, indistinguishable from Guianan ones. South of the lower Amazon, it does not seem to extend beyond the Tapajóz, and I expect that the record from Boim (left bank of this river) will prove to be referable to *C. p. regina*. Like those of the allied races, the females have no red on the crown or any black in the plumage, and the specimens described by Miller were doubtless immature males.

Material examined.—French Guiana (Cayenne, Roche-Marie, Saint Jean du Maroni, etc.) 20.—Dutch Guiana: near Paramaribo 3.—British Guiana: Rupununi River 3, Annai 1.—Brazil: Upper Rio Branco (Serra da Lua, Forte do São Joaquim) 16; Pará (and vicinity) 9; Obidos 1; Maranhão 14; Bahia (City of Bahia, Santo Amaro, etc.) 17.

Serra da Lua, Rio Branco 1), Maranhão (Anil, São Luiz 1, Rosario 2, Tury-assú 4), Bahia (Santo Amaro 5, unspecified 2).

Chiroxiphia pareola regina Sclater. Queen Manakin.

Chiroxiphia regina (Natterer MS.) Sclater, Ann. Mag. Nat. Hist., (2), 17, p. 469, 1856—Borba, Rio Madeira (type in Vienna Museum examined); idem, P.Z.S.Lond., 25, p. 266, 1857—Rio Javarri; idem, Cat. Coll. Amer. Birds, p. 251, pl. 20, 1862—Upper Amazon; Pelzeln, Orn. Bras., 2, p. 129, 1868—Borba, Rio Madeira, and Manaqueri, Rio Solimões (spec. examined); Sclater and Salvin, P.Z.S. Lond., 1873, p. 283—Rio Javarri; Taczanowski, Orn. Pér., 2, p. 348, 1884—Rio Javarri; Sclater, Cat. B. Brit. Mus., 14, p. 308, 1888—Rio Javari; Hellmayr, Nov. Zool., 14, p. 361, 1907—Humaythá and Paraíso, Rio Madeira (descr. female); idem, l.c., 17, p. 309, 1910—Calama, Rio Madeira, and Maroins, Rio Machados (crit.); idem in Wytsman, Gen. Av., Part 9, p. 19, 1910 (range); Miller, Bull. Amer. Mus. N.H., 24, p. 337, 1908 (crit.); Snethlage, Bol. Mus. Goeldi, 8, p. 369, 1914—Villa Braga, Rio Tapajóz (spec. examined).

Range: Northern Brazil, south of the Amazon, from the left bank of the Rio Tapajóz west to the Javari, on the Peruvian border.

Chiroxiphia pareola napensis Miller.2 Napo Manakin.

Chiroxiphia napensis MILLER, Bull. Amer. Mus. N.H., 24, p. 338, pl. 25, 1908—Río Napo, Ecuador.

Pipra cornuta (not of SPIX) SCLATER, P.Z.S.Lond., 26, p. 71, 1858—Río Napo (spec. in British Museum examined); SCLATER and SALVIN, l.c., 1867, p. 751; idem, l.c., 1873, p. 282—Chyavetas, Peru (spec. examined).

Chiroxiphia pareola (not Pipra pareola LINNAEUS) SCLATER, Cat. B. Brit. Mus., 14, p. 307, 1888—part, spec. j, k, Sarayacu (spec. examined); ALLEN, Bull. Amer. Mus. N.H., 2, p. 72, 1889—Napo, Ecuador.

¹Chiroxiphia pareola regina SCLATER: Similar to C. p. napensis, but vertical crest of adult male lemon or gamboge yellow instead of red; female much darker and more uniform green below than those of C. p. pareola and C. p. atlantica. Wing 69-74, (female) 67-71; tail 32-36, (female) 34-36; bill 9-10.

Two males from Villa Braga, Rio Tapajóz agree with a series from the Rio Madeira.

Material examined.—Villa Braga, Rio Tapajóz 2.—Rio Madeira, Borba (including the type) 4, Calama 5, Paraíso 2, Humaythá 5; Maroins, Rio Machados 1.—Manaqueri, Rio Solimões 2.

²Chiroxiphia pareola napensis Miller: Similar to C. p. pareola and of about the same proportions except for the relatively larger bill; but vertical crest of adult male lighter, scarlet vermilion rather than crimson; back much darker azure-blue; legs and feet reddish instead of yellowish. Female not certainly distinguishable from that of C. p. regina. Wing (males) 69-72; tail 32-34; bill 10.

A bird, marked "male," in the green plumage, from Loretoyacu, on the north bank of the Marañón near Pebas, agrees with a female from the Río Napo, while a young male, obtained by E. Bartlett at Chyavetas in August 1866, has the few fresh feathers just appearing in the middle of the crown of a lighter, more orange-vermilion tone than birds from Sarayacu.

Material examined.—Ecuador: Sarayacu 2, Río Napo 3.—Peru: Loretoyacu 1, Chyavetas 1.

- Ceratopipra iracunda (not of Salvin and Godman) Sclater, Cat. B. Brit. Mus., 14, p. 288, 1888—part, spec. b-d, Río Napo, Ecuador, and Chyavetas and Loretoyacu, Peru (spec. examined).
- Chiroxiphia pareola napensis Hellmayr in Wytsman, Gen. Av., Part 9, p. 19, 1910—Río Napo, Sarayacu, Ecuador; Chapman, Bull. Amer. Mus. N.H., 36, p. 484, 1917—La Morelia, Caquetá, Colombia; idem, l.c., 55, p. 534, 1926—Río Napo, Río Suno, and below San José, Ecuador.

Range: Southeastern Colombia (Comisaria del Caquetá); eastern Ecuador; and northeastern Peru (Loretoyacu, near Pebas, Río Marañón; Chyavetas).

Chiroxiphia pareola boliviana Allen. Bolivian Manakin.

- Chiroxiphia pareola boliviana Allen, Bull. Amer. Mus. N.H., 2, p. 87, 1889
 —Yungas, Bolivia; Berlepsch and Stolzmann, Ornis, 13, p. 114, 1906
 —Huaynapata, Marcapata, Peru; Hellmayr in Wytsman, Gen. Av.,
 Part 9, p. 19 1910—southeastern Peru and Bolivia.
- Chiroxiphia pareola (not Pipra pareola LINNAEUS) SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 617—Nairapi and Tilotilo, Bolivia; SCLATER, Cat. B. Brit. Mus., 14, p. 307, 1888—part, spec. w-d', Tilotilo and Nairapi, Bolivia.
- Metopia galeata (not of LICHTENSTEIN) SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 617—Simacu, Bolivia; SCLATER, Cat. B. Brit. Mus., 14, p. 290, 1888—part, spec. i, Simacu (specimen in British Museum examined; = female).
- Chiroxiphia boliviana MILLER, Bull. Amer. Mus. N.H., 24, p. 339, pl. 25, 1908—Yungas, Santa Cruz (near Apolobamba), and Quebrada Onda, Bolivia (crit.).

Range: Southeastern Peru and Bolivia (Yungas of La Paz, Cochabamba, and Santa Cruz).

*Chiroxiphia caudata (Shaw and Nodder). Azara's Long-tailed Manakin.

Pipra caudata Shaw and Nodder, Natur. Misc., 5, pl. 153, 1793—"in the warmer parts of South America"; Thunberg, Mém. Ac. Sci. St. Pétersb., 8, p. 284, pl. 7, fig. 1 (adult male), 1822—Brazil; SPIX, Av. Bras., 2, p. 5,

¹Chiroxiphia pareola boliviana ALLEN: Similar to C. p. pareola, but with much smaller, slenderer bill, and much longer tail, the rectrices being also decidedly broader; black frontlet wider; vertical crest much more restricted and of a darker crimson color; blue of mantle duller; legs and feet darker, reddish rather than yellowish flesh color, with the feathering extending down to the heel-joint. Wing 69½-75; tail 46-53; bill 9-10.

Material examined.—Peru: Huaynapata, Marcapata 3.—Bolivia: San Antonio, Yungas of La Paz 2; Simacu 1; Quebrada Onda, Yungas of Cochabamba 7; Santa Cruz 4.

pl. 6, fig. 1 (adult male), 2 (young male), 1825—"Rio Solimõens," errore; SWAINSON, Orn. Draw., Part 4, pl. 45 (male, female), 1836 (?)—Brazil; BURMEISTER, Syst. Übers. Th. Bras., 2, p. 441, 1856—Brazil; EULER, Journ. Orn., 15, p. 223, 1867 (nest and eggs descr.).

Varsovie, 5, pp. 483, 498, 1912—Vera Guarany, Paraná; DABBENE, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 23, p. 323, 1912-Villa Rica, Paraguay; BERTONI, Faun. Parag., p. 58, 1914—Alto Paraná, Paraguay; Ménégaux, Rev. Franç. d'Orn., No. 115, p. 334, 1918-Villa Lutetia, near San Ignacio, Misiones; PINTO-PEIXOTO, Arch. Mus. Nac. Rio de Janeiro, 24, p. 262, 1924—Monte Serrat, Itatiaya; Sztolcman, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 178, 1926-Vermelho, Paraná; Holt, Bull. Amer. Mus. N. H., 57, p. 309, 1928—Monte Serrat, Itatiaya.

Range: Southeastern Brazil, from southern Bahia and Minas Geraes to Rio Grande do Sul; Paraguay; northeastern Argentina (Misiones).

11: Brazil (Victoria, São Paulo 1; São Paulo 2; Rio das Velhas, near Lagôa Santa, Minas Geraes 4); Argentina, Misiones (Puerto Segundo 2, Río Paranay 2).

Genus ILICURA Reichenbach.

Ilicura Reichenbach, Av. Syst. Nat., pl. 63, 1850—type by subs. desig. (Gray, 1855) Pipra militaris Shaw.

Hicura Bonaparte, Ateneo Italiano, 2, No. 11, p. 316 (=Consp. Voluc. Anisod., p. 6), 1854—emendation.

Heilicura Salvin, Cat. Strickland Coll., p. 320, 1882-emendation.

Helicura Sclater Cat. B. Brit. Mus., 14, p. 311, 1888—emendation.

Illicura Boucard and Berlepsch, The Humming Bird, 2, p. 45, 1892—emendation..

*Ilicura militaris (Shaw and Nodder). MILITARY MANAKIN.

Pipra militaris Shaw and Nodder, Natur. Misc., 20, pl. 849, 1808—South America, we suggest vicinity of Rio de Janeiro; Burmeister, Syst. Übers. Th. Bras., 2, p. 441, 1856—Nova Friburgo, Rio; Pelzeln, Reise Novara, Zool., 1, Vogel, p. 79, 1865—Corcovado, near Rio de Janeiro.

Pipra rubrifrons Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 19, p. 161, 1818—"l'Amérique méridionale."²

Pipra oxyura Nordmann in Erman's Reise, Naturhist. Atlas, p. 12, pl. 9, figs. 1, 2, 1835—Brazil.

Ilicura militaris Pelzeln, Orn. Bras., 2, p. 129, 1868—Rio de Janeiro and Capivari (Rio), Ypanemá, São Paulo; Hamilton, Ibis, 1871, p. 305—São Paulo; Pelzeln, Nunq. Otios., 2, p. 292, 1874—Nova Friburgo, Rio; Cabanis, Journ. Orn., 22, p. 89, 1874—Cantagallo, Rio; Sclater, Cat. B. Brit. Mus., 14, p. 311, 1888—Rio de Janeiro, "Novo" Friburgo, Santa Fé (Minas Geraes), and "Rio Claro, Goyaz" [= São Paulo]; Ihering, Rev. Mus. Paul., 3, p. 208, 1899—Ypiranga and Iguapé, São Paulo; idem, l.c., 4, p. 156, 1900—Nova Friburgo; idem, Cat. Faun. Braz., 1, p. 301, 1907—Ypiranga, Iporanga, Alto da Serra, and Ubatuba, São Paulo; Hellmayr in Wytsman, Gen. Av., Part 9, p. 20, pl. 2, fig. 4, 1910 (range); idem, Verh.

¹Birds from Paraguay appear to be identical with others from Brazil. The type of *P. ignicapilla* is nothing but an individual variant with golden yellow instead of scarlet cap.

Twenty-nine specimens from Brazil (Minas Geraes to Rio Grande do Sul), Paraguay, and Misiones examined.

²Pipra melanocephala (not of P. L. S. MÜLLER, 1776) VIEILLOT (Tabl. Enc. Méth., Orn., I, livr. 89, p. 389, 1820—"l'île de la Trinité"), according to the description, resembles *I. militaris*, but lacks the red frontal patch, while the outer webs of the secondaries are rufous ("rousses") instead of olive green. No such bird has ever been found on the island of Trinidad or anywhere else, nor does the type exist in the Paris Museum. The name is at any rate preoccupied by MÜLLER.

Orn. Ges. Bay., 12, p. 137, 1915—Braço do Sul, near Victoria, Espirito Santo.

Chiroxiphia militaris Reinhardt, Vidensk. Medd. Naturhist. Foren., 1870, p. 320—Lagôa Santa and Sete Lagôas, Minas Geraes, and Nova Friburgo, Rio de Janeiro.

Illicura militaris BOUCARD and BERLEPSCH, The Humming Bird, 2, p. 45, 1892—Porto Real, Rio.

Range: Southeastern Brazil, from Espirito Santo and Minas Geraes south to Santa Catharina.¹

1: Brazil (São Paulo 1).

Genus CORAPIPO Bonaparte.

Corapipo Bonaparte, Ateneo Italiano, 2, No. 11, p. 316 (=Consp. Voluc. Anisod., p. 6), 1854—type by monotypy Pipra gutturalis Linnaeus.

Coropipo CABANIS and HEINE, Mus. Hein., 2, p. 94, 1859-emendation.

*Corapipo gutturalis (Linnaeus). WHITE-THROATED MANAKIN.

Pipra gutturalis Linnaeus, Syst. Nat., 12th ed., 1, p. 340, 1766—based on "Le Manakin à gorge blanche" Brisson, Ornith., 4, p. 444, pl. 36, fig. 1, 1760—"in America," hab. subst. Cayenne (auct. Berlepsch, 1908); Desmarest, Hist. Nat. Tang., Man. et Todiers, pl. 63 (male), 65 (young male), 1805-6—Cayenne; Wagler, Isis, 1830, p. 935 (descr.); Salvin, Ibis, 1885, p. 300—Bartica Grove, Camacusa, Merumé Mts., and Mount Roraima, Brit. Guiana; W. Sclater, l.c., 1887, p. 318—Maccasseema, Brit. Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 301, 1888—Cayenne, Bartica Grove, Merumé Mts., Camacusa; Berlepsch, Nov. Zool., 15, p. 138, 1908—Cayenne; Penard and Penard, Vog. Guyana, 2, p. 191, 1910—Surinam.

Pipra perspicillata, WAGLER, Isis, 1830, p. 935—based on DESMAREST, Hist. Nat. Tang., Man. et Todiers, pl. 65, Cayenne (= young male).

Corapipo gutturalis Hellmayr in Wytsman, Gen. Av., Part 9, p. 21, 1910—Cayenne and British Guiana; Beebe, Trop. Wild Life in Brit. Guiana, 1, p. 134, 1917—Bartica Grove; Chubb, Birds Brit. Guiana, 2, p. 259, 1921—British Guiana (numerous localities).

Range: French, Dutch, and British Guiana.2

6: British Guiana (Camacusa 3, Caramang River 3).

*Corapipo leucorrhoa leucorrhoa (Sclater).3 COLOMBIAN WHITE-THROATED MANAKIN.

¹Material examined.—Braço do Sul, near Victoria, Espirito Santo 1; Rio de Janeiro 3; Capivari, near Rio 1; Colonia Alpina, Serra dos Orgãos, Rio 10; Rio Jordão, near Araguary, Minas Geraes 3; Ipanemá, São Paulo 3; São Paulo 1; Blumenau, Santa Catharina 1.

³Material examined.—French Guiana: Cayenne 3.—British Guiana: Camacusa 6, Caramang River 3, Roraima 2.

³Corapipo l. leucorrhoa (SCLATER) is characterized by the outermost primary being reduced to a narrow lanceolate feather, not exceeding 14 to 16 mm. in

62 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Pipra leucorrhoa Sclater, P.Z.S.Lond., 1863, p. 63, pl. 10, 1863—Bogotá (type in British Museum examined); Berlepsch, Journ. Orn., 32, p. 305, 1884—Bucaramanga (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 301, 1888—part, spec. p, q, Bogotá; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 111, 1890—part, Colombia.

Corapipo leucorrhoa leucorrhoa HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 21, 1910—Bogotá, Bucaramanga, and Primavera, Colombia; RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 754, 1907—Colombia (char.).

Corapipo leucorrhoa Chapman, Bull. Amer. Mus. N. H., 36, p. 484, 1917— El Consuelo and Honda, Magdalena Valley, and San Antonio, Western Andes, Colombia.

Range: Tropical and lower Subtropical Zone of Colombia (Bucaramanga, El Consuelo, and Honda, Magdalena Valley; Bogotá; San Antonio, near Pavas, La María, Dagua Valley, and Primavera, Western Andes, dept. Cauca).

1: Colombia (Bogotá 1).

*Corapipo leucorrhoa altera Hellmayr. Costa Rican Whitethroated Manakin.

Corapipo leucorrhoa altera Hellmayr, Bull. Brit. Orn. Cl., 16, p. 84, 1906—part, type from Carrillo, eastern Costa Rica; Ridgway, Bull. U.S. Nat. Mus., 50, Part 4, p. 755, 1907—Panama to eastern Nicaragua, excl. Guaitil (monogr., full bibliography); Hellmayr in Wytsman, Gen. Av., Part 9, p. 21, pl. 1, fig. 2, 1910—part, Panama, Veragua, Costa Rica, and Nicaragua; idem, Bull. Brit. Orn. Cl., 25, p. 87, 1910—eastern Costa Rica; Kennard and Peters, Proc. Boston Soc. N.H., 38, p. 457, 1928—Boquete Trail, Panama.

Pipra leucorrhoa (not of Sclater) Salvin, P.Z.S.Lond., 1867, p. 149—Santa Fé de Veragua and Tucurriquí, Costa Rica (descr. female); idem, l.c., 1870, p. 200—part, Calovevora and Laguna de Castillo, Veragua; LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 9, p. 116, 1868—part, Cervantes and

length, while the fifth and sixth primaries form the tip of the wing. I notice some variation in the proportions of the third to the sixth primaries in different individuals, but the series examined is not large enough to ascertain whether this is of geographical significance.

Material examined.—Bogotá 4; Bucaramanga 1; Primavera, Cauca 2; near Pavas, Western Andes 4; La María, Dagua Valley 1.

¹Corapipo leucorrhoa altera Hellmayr: Male similar to C. l. leucorrhoa in having the posterior border of the white throat patch nearly straight; but under parts duller, less glossed with steel-blue; wing-formula very different, the fourth primary being longest, and the outermost about half as long as wing, neither conspicuously narrowed nor lanceolate. Wing of adult males 58½-60 (eastern Costa Rica), 60 (Veraguas), 57-59 (Mount Sapo, Darién); tail 31-33 (Costa Rica), 32 (Veraguas), 27-30 (Darién); bill 8-8½.

Specimens from eastern Panama and Chocó, Colombia are slightly smaller

than a topotypical series.

Material examined.—Eastern Costa Rica (Carrillo, Cariblanco de Sarapiquí, etc.) 12.—Veraguas 1.—Panama: Mount Sapo, Darién 4.

Range: Eastern Nicaragua; Caribbean slope and extreme northwestern Pacific slope of Costa Rica; Veraguas1; Panama; and coast district of northwestern Colombia (Baudó Range, Chocó).

Panama (Veraguas 1).

*Corapipo leucorrhoa heteroleuca Hellmayr. PACIFIC WHITE-THROATED MANAKIN.

Corapipo leucorrhoa heteroleuca HELLMAYR, Bull. Brit. Orn. Cl., 25, p. 87, March, 1910-Boquete, Chiriquí.

Corapipo altera albibarbis CARRIKER, Ann. Carnegie Mus., 6, p. 679, August, 1910—Guaitil, southwestern Costa Rica (crit., range).

Pipra leucorrhoa (not of SCLATER) LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 9, p. 116, 1868—part, Guaitil, Costa Rica; SALVIN, P.Z.S.Lond., 1870, p. 200-part, Volcán de Chiriquí and Bugaba; ZELEDÓN, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—part, Pozo Azul de Pirris and Guaitil, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 301, 1888—part, spec. n,o, Bugaba and southern slope of Volcán de Chiriquí; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 111, 1890—part, Guaitil (Costa Rica), Chiriquí and Bugaba (Panama); CHERRIE, Expl. Zool. en Costa Rica, 1890-91, p. 36, 1893—Palmar and Boruca; BANGS, Proc. New Engl. Zool. Cl., 3, p. 40, 1902-Boquete and Volcán de Chiriquí, Panama.

Corapipo leucorrhoa altera (not of HELLMAYR) RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 755, 1907-part, Guaitil, Costa Rica; Bangs, Auk,

¹Mr. L. Griscom (in litt.) states that this form is the only one found in Veraguas, ranging as far west as Cerro Flores in extreme eastern Chiriqui.

²Corapipo leucorrhoa heteroleuca Hellmayr: Agreeing with C. l. altera in shape of wing, but adult male easily distinguished by the different form of the white throat patch, the posterior border of which is deeply indented medially towards the chin, giving the impression of an inverted V. Wing 58-62; tail 31-34; bill 8-9.

Material examined.—Southwestern Costa Rica (Boruca, Guayabo, Pozo Azul de Pirris, etc.) 14.—Panama: Boquete 4, Chiriquí 5.

64 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

24, p. 303, 1907—Boruca and Paso Real, Costa Rica; Ferry, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 269, 1910—Guayabo, Costa Rica.

Range: Southwestern Costa Rica and adjacent section of Panama (Bugaba, Boquete, Volcán de Chiriquí, western Chiriquí).

7: Costa Rica (Boruca 3, Guayabo 1); Panama (Boquete 1, Chiriquí 2).

Genus MANACUS Brisson.

- Manacus Brisson, Orn., 4, p. 442, 1760—type by tautonomy "Manacus" Brisson = Pipra manacus Linnaeus.
- Chiromachaeris Cabanis, Arch. Naturg., 13, (1), p. 235, 1847—type by monotypy Pipra manacus Linnaeus.

*Manacus manacus trinitatis (Hartert).1 TRINIDAD MANAKIN.

- Chiromachaeris manacus trinitatis HARTERT, Bull. Brit. Orn. Cl., 29, p. 63, 1912—Chaguaramas, Trinidad.
- Pipra gutturalis (not of Linnaeus) Léotaud, Ois. Trinidad, p. 253, 1866—Trinidad.
- Chiromachaeris manacus (not Pipra manacus LINNAEUS) TAYLOR, Ibis, 1864, p. 87—Trinidad; Sclater, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. f-h, Trinidad.
- Manacus manacus Chapman, Bull. Amer. Mus. N.H., 6, p. 45, 1894—Princestown, Trinidad; Cherrie, Mus. Brookl. Inst., Sci. Bull., 1, p. 190, 1906—Aripo, Trinidad.
- Manacus manacus manacus Bangs, Proc. New Engl. Zool. Cl., 1, p. 34, 1899
 —part, Trinidad; Cherrie, Mus. Brookl. Inst., Sci. Bull., 1, p. 364,
 1908—Carenage and Aripo, Trinidad; (?) Beebe, Zoologica (N.Y.), 1, p.
 94, 1909—north of Guanoco, Orinoco delta, Venezuela.
- Chiromachaeris manacus manacus Hellmayr, Nov. Zool., 13, p. 27, 1906—Caparo, Laventille, Valencia, and Chaguaramas, Trinidad; idem in Wytsman, Gen. Av., Part 9, p. 22, 1910—part, Trinidad.

Range: Island of Trinidad, and possibly the delta of the Orinoco in northeastern Venezuela.

3: Trinidad (Port of Spain 1, unspecified 2).

¹Manacus manacus trinitatis (HARTERT): Very similar to M. m. manacus, but averaging larger, with heavier (though not always longer) bill, and under parts whiter, only the flanks, thighs, and under tail coverts being pale gray, the latter more extensively tipped with white; female distinguishable only by larger bill and slightly greater dimensions. Wing (adult male) 54-55, rarely 52 or 53; tail 32-35, once 31; bill 11-12.

This form I have seen only from Trinidad where it is widely distributed. It is, however, possible that birds from the Orinoco delta belong likewise to this race. Unfortunately, the specimens secured by Beebe at Guanoco cannot be found.

Material examined.—Trinidad: Caparo 24, Laventille 2, Chaguaramas I, Aripo 3, Port of Spain I.

*Manacus manacus (Linnaeus). White-bearded Man-AKIN.

Pipra manacus Linnaeus, Syst. Nat., 12th ed., 1, p. 340, 1766—based on Edwards (Glean. Nat. Hist., 1, p. 107, pl. 260, sup. fig., Surinam) and Brisson (Orn., 4, p. 442, 1760, Cayenne, excl. syn. Marcgrave and hab. "Brasilia"), we accept Surinam as type locality; Schomburgk, Reisen Brit. Guiana, 2, p. 490, 1848—Sand hills of the Demerara River.

Pipra melanocephala P. L. S. MÜLLER, Natursyst., Suppl., p. 177, 1776—evidently based on Daubenton, Pl. Enl. 303, fig. 1, Cayenne.

Manacus edwardsi Bonaparte, Consp. Av., 1, p. 171, 1850—based on Edwards, pl. 260, sup. fig., Surinam, and Daubenton, Pl. Enl. 302, fig. 1.1

Manacus gutturosus (not Pipra gutturosa Desmarest) Bonaparte, Bull. Soc. Linn. Normandie, 2, p. 37, 1857—Cayenne.

Bras., 2, p. 130, 1868—part, Barra do Rio Negro [=Manáos] (spec. examined); Salvin, Ibis, 1885, p. 301—Bartica Grove and Camacusa, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. a-e, British Guiana, Cayenne, Bartica Grove, and Camacusa; Ménégaux, Bull. Mus. Hist. Nat. Paris, 10, p. 180, 1904—Saint-Georges d'Oyapock, French Guiana; Berlepsch, Nov. Zool., 15, pp. 138, 318, 1908—Cayenne, Roche-Marie, Ipousin, R. Approuague, Saint-Georges d'Oyapock, Maroni, French Guiana; Snethlage, Bol. Mus. Goeldi, 8, p. 369, 1914—Monte Alegre, Obidos, and Rio Jamundá (Faro), Brazil; Chubb, Birds Brit. Guiana, 2, p. 261, 1921—numerous localities.

Chiromachaeris gutturosa(us) (errore) Goeldi, Ibis, 1897, p. 153—Counany, Brazil; Ménégaux, Bull. Mus. Hist. Nat. Paris, 10, p. 180, 1904—Maroni, French Guiana.

Manacus manacus manacus Bangs, Proc. New Engl. Zool. Cl., 1, p. 34, 1899—part, Guianas; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 73, 1918—Paramaribo, Lelydorp, Rijsdijkweg, Surinam.

Chiromachaeris manacus manacus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 22, 1910—part, Guianas and northern Brazil; BEEBE, Trop. Wild Life, 1, p. 134, 1917—Bartica Grove.

Range: French, Dutch, and British Guiana; northern Brazil, south to the north bank of the lower Amazon, west to Manáos.²

2: British Guiana (Hyde Park, Demerara River 2).

¹Daubenton's "Manakin du Brésil" (pl. 302, fig. 1) is clearly a copy of Edwards's "Black-capped Manakin" (pl. 260, upper figure), with a wrongly assigned habitat.

²Birds from the north bank of the Amazon (Monte Alegre, Manáos) agree perfectly with a series from French and Dutch Guiana. Adult males from various localities in British Guiana appear to me likewise indistinguishable, showing the characteristic short wing tip, the grayish suffusion on breast and belly, as well as the black mottling in the white nuchal collar and postocular region.

Material examined.—French Guiana: Cayenne 7, Saint Jean du Maroni 1, Roche-Marie 10, Approuague 3.—Dutch Guiana: near Paramaribo 5, "Surinam" 3.—British Guiana: Bartica Grove 2, Mazaruni River 1, Demerara River 5.—

Brazil: Monte Alegre I, Manáos 2.

*Manacus manacus purus Bangs.1 Lower-Amazonian Manakin.

Manacus manacus purus Bangs, Proc. New Engl. Zool. Cl., 1, p. 36, 1899—Santarém, Rio Tapajóz, Brazil; Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 31, 90, 1912—Marco da Legua, Pará (Pará localities); Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 166, 1925—Miritiba, Maranhão; Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 168, 1928—Rio Guamá, Rio Muraiteua, Pará.

Chiromachaeris manacus (not Pipra manacus Linnaeus) Sclater and Salvin, P.Z.S.Lond., 1867, p. 580—Pará; Pelzeln, Orn. Bras., 2, p. 130, 1868—part, Borba, Rio Madeira (spec. examined); Layard, Ibis, 1873, p. 384—Pará; Sclater, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. j, k, Pará; Goeldi, Ibis, 1903, p. 499—Capim River; Snethlage, Journ. Orn., 55, p. 289, 1907—Pará, Santo Antonio, Capim River.

Manacus manacus RIKER and CHAPMAN, Auk, 8, p. 25, 1891—Diamantina, near Santarém; REISER, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 100, 1910—Maranhão.

Chiromachaeris manacus purus Hellmayr, Nov. Zool., 13, p. 363, 1906—Santo Antonio do Prata, Marco da Legua, and Magoary, Pará (crit.); idem, l.c., 17, p. 310, 1910—range in part, Borba to Maranhão; idem in Wytsman, Gen. Av., Part 9, p. 23, pl. 1, fig. 1, 1910—part, Maranhão to lower Madeira; Ihering, Cat. Faun. Braz., 1, p. 302, 1907—Santarém; Snethlage, Bol. Mus. Goeldi, 8, p. 370, 1914—Pará, Providencia, Ananindeua, Benevides, Santa Izabel, Quati-purú, Santo Antonio do Prata, Rio Capim (Araproaga), Rio Tocantins (Cametá, Baião, Arumatheua), Tamacury, and Rio Tapajóz (Boim); Beebe, Zoologica (N.Y.), 2, p. 92, 1916— Utinga, Pará; Snethlage, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 63, 1926—Tury-assú, Maranhão; Hellmayr, Field Mus. Nat. Hist., Zool. Ser., 12, p. 335, 1929—Maranhão.

Chiromachaeris gutturosus (not Pipra gutturosa Desmarest) Ihering, Cat. Faun. Braz., 1, p. 302, 1907—part, Maiobá, Maranhão.

Range: Northern Brazil, south of the Amazon, from northern Maranhão west to the lower Rio Madeira (Borba).²

9: Brazil, Pará (Utinga 2); Maranhão (Tury-assú 4, Rosario 3).

¹Manacus manacus purus BANGS: Differs in the male sex from M. m. manacus by reason of much longer wing tip (8 to 12 instead of 4 to 6½ mm.); wider white nuchal band, without any black mottling; less black on the back; more extensive slate gray uropygial area; pure white middle of the abdomen and under tail coverts.

Birds from Maranhão are identical with those from the Pará region. Three adult males from Borba, lower Rio Madeira, show a certain tendency towards the characters of M. m. subpurus on the under parts, but by their slightly shorter wing tip (7 to 8 mm.) and grayish-tinged under tail coverts they diverge in the direction of M. m. manacus.

Material examined.—Maranhão: Miritiba 7, Tury-assú 4, Rosario 3.—Pará: Pará 5, Marco da Legua 3, Magoary (E.F.B.) 2, Santo Antonio do Prata 9.—Amazonas: Borba, lower Madeira 3.

²While this was passing through the press, Mr. Todd (Proc. Biol. Soc. Wash., 41, p. 111, 1928) has separated the birds of the Pará region (Benevides) as M. m. purissimus, basing the distinction on the more extensively white upper back and

Manacus manacus subpurus CHERRIE and REICHENBERGER, Amer. Mus. Novit., 58, p. 4, 1923-Tapirapoan, Siputuba River, Matto Grosso (type examined).

67

Chiromachaeris manacus (not Pipra manacus LINNAEUS) PELZELN, Orn. Bras. 2, p. 130, 1868—part, Engenho do Gama and São Vicente, Matto Grosso (spec. examined).

Chiromachaeris manacus purus (not of BANGS) HELLMAYR, Nov. Zool., 17, p. 309, 1910-part, Calama, Jamarysinho and Santa Izabel, Rio Preto, Rio Madeira (crit.); idem in WYTSMAN, Gen. Av., Part 9, p. 23, 1910—part, Rio Madeira to Matto Grosso.

Range: Central Brazil, in northern Matto Grosso, extending along the Rio Madeira as far north as the junction of the Rio Machados.

Manacus manacus interior Chapman.2 Upper Amazonian Manakin.

Manacus manacus interior CHAPMAN, Bull. Amer. Mus. N.H., 33, p. 624, 1914-Villavicencio, eastern Colombia (type) and Maripa, lower Caura, Venezuela (spec. examined); idem, l.c., 36, p. 486, 1917-Villavicencio; CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 249, 1916-Maipures, Río Orinoco, and Maripa, Caura, Venezuela; CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 535, 1926—Zamora, Río Suno, and below San José, Ecuador.

Chiromachaeris gutturosa (not Pipra gutturosa DESMAREST) SCLATER, P.Z.S. Lond., 22, p. 114, 1854—Quijos, Ecuador.

correspondingly reduced black area above. The specimens from Borba, mentioned above, no doubt belong to M. m. purus, as defined by Mr. Topp. The range of the latter form would thus seem to be restricted to western Lower Amazonia, extending from the Tapajóz to the lower Rio Madeira, while birds from east of the Tocantins should be called M. m. purissimus.

Manacus manacus subpurus CHERRIE and REICHENBERGER: Closely similar to M. m. purus, but black dorsal area much more extensive; gray uropygial zone with darker gray. Wing (adult male) 51-53; tail 29-31; bill 9-9½.

Material examined.—Matto Grosso: Tapirapoan, Siputuba River (the type)
1; Mutúm Cavallo 1; Engenho do Gama, Rio Guaporé 2; São Vicente 1.—Rio Madeira: Calama 1, Santa Izabel 3, Jamarysinho 1.

²Manacus manacus interior Chapman: In the male sex somewhat intermediate between M. m. manacus and M. m. abditivus, combining, as it does, the loose, soft "chin-beard" and immaculate white nuchal collar of the former with the gray abdomen of the latter; differing, however, from both by reason of somewhat larger size and much longer wing tip (9 to 11, instead of 4 to 6½ mm.), while the belly is even more uniform and darker gray than in abditivus. Wing (male) 52-55; tail 31-34-

Birds from eastern Colombia, the Napo region, and a single male from Iquitos, Peru, agree very well together. Two from the Caura Valley are likewise wholly typical of this race, while one from Barcellos, Rio Negro, by its less grayish abdomen and slightly mottled postocular region, forms the transition to M. m.

Material examined.—Colombia: Villavicencio (including the type) 2, "Bogotá" 9.—Ecuador: Río Napo 4, Gualaquiza 1.—Peru: Iquitos 1.—Venezuela, Caura Valley: La Unión 1, Maripa 2.—Brazil: Barcellos, Rio Negro 1.

Bras., 2, p. 130, 1868—part, Barcellos, Rio Negro (spec. examined); Sclater and Salvin, P.Z.S.Lond., 1866, p. 567—Peru; idem, l.c., 1867, p. 751— Chyavetas; p. 978—Pebas; idem, l.c., 1873, p. 283—Nauta, Chyavetas, Pebas, Peru; Taczanowski, l.c., 1882, p. 23—Yurimaguas; idem, Orn. Pér., 2, p. 349, 1884—Nauta, Pebas, Chyavetas, Balza-Puerto, Yurimaguas, Peru; Sclater, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. i,l,q,r, Pebas, Sarayacu, "Bogotá"; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—part, Gualaquiza and Zamora, Ecuador; Berlepsch and Hartert, Nov. Zool., 9, p. 53, 1902—Maipures, Río Orinoco, and La Unión, Caura, Venezuela (spec. examined).

Manacus manacus Allen, Bull. Amer. Mus. N.H., 2, p. 73, 1889—Río Napo; Ménégaux, Miss. Serv. Géog. Armée Mes. Arc Mérid. Equat., 9, p. B61, 1911—part, eastern Ecuador.

Manacus manacus manacus Bangs, Proc. New Engl. Zool. Cl., 1, p. 34, 1899—part, Pebas, Peru.

Chiromachaeris manacus manacus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 22, 1910—part, Orinoco region to eastern Ecuador and south to Pebas, Peru.

Range: Upper Amazonia, from the eastern slope of the Andes in Colombia through eastern Ecuador to northern Peru, east to the Caura Valley, Venezuela, and the upper stretches of the Rio Negro, northwestern Brazil (Barcellos).

*Manacus manacus abditivus Bangs. 1 Santa Marta Manakin.

Manacus manacus abditivus Bangs, Proc. New Engl. Zool. Cl., 1, p. 35, 1899
—Santa Marta, Colombia; Allen, Bull. Amer. Mus. N.H., 13, p. 155, 1900—Bonda, Minca, Cacagualito, Donama [=Don Amo], Masinga Vieja, and Jordan, Santa Marta region; idem, l.c., 21, p. 287, 1905—Don Diego (nest and eggs descr.); Chapman, Bull. Amer. Mus. N.H., 36, p. 485, 1917—Puerto Valdivia, Medellín, and Malena, lower Magdalena, Colombia; Todd and Carriker, Ann. Carnegie Mus., 14, p. 336, 1922—Minca, Buritaca, Don Diego, Mamatoco, La Tigrera, Agua Dulce, Las Vegas, Loma Larga, Chirua, San Miguel, La Concepción, and Fundación, Santa Marta region.

Chiromachaeris manacus (not Pipra manacus LINNAEUS) SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 517—Remedios and Neche; SALVIN and GODMAN,

¹Manacus manacus abditivus Bangs: Nearest to M. m. manacus and wing tip hardly longer (6 to 8 mm.), but easily distinguished by more elongated as well as more rigid "chin-beard," darker gray abdomen, and by lacking the black mottling on postocular region and nuchal collar. Wing (adult male) 51-54; tail 28-32.

Two males from Remedios have the white areas of the plumage very faintly tinged with yellowish, suggesting intergradation with *M. m. flaveolus*, the form found in the upper Magdalena Valley.

Material examined.—Colombia, Santa Marta region: Masinga Vieja 1, Don Amo 1, Minca 5, Bonda 3; Remedios, lower Cauca 2.

60

Ibis, 1880, p. 169-Minca, Santa Marta region; SCLATER, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. s-u, Remedios, Minca.

Manacus manacus Bangs, Proc. Biol. Soc. Wash., 12, p. 137, 1898-Santa Marta.

Chiromachaeris manacus abditivus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 23, 1910-part, Santa Marta.

Range: Northern Colombia, from the Santa Marta region south to the lower Cauca (Puerto Valdivia, Medellín) and lower Magdalena River (Malena).

1: Colombia (Santa Marta 1).

*Manacus manacus flaveolus Cassin. YELLOWISH MANAKIN.

Manacus flaveolus Cassin, Proc. Ac. Nat. Sci. Philad., 1851, p. 349-Bogotá; SCLATER, P.Z.S.Lond., 23, p. 151, 1855-Bogotá.

Chiromachaeris flaveola Berlepsch, Journ. Orn., 32, p. 305, 1884-Bucaramanga (spec. examined); SCLATER, Cat. B. Brit. Mus., 14, p. 315, 1888 -Bogotá, Bucaramanga; HELLMAYR in WYTSMAN, Gen. Av., Part o. p. 23, 1910-Bogotá and Bucaramanga.

Manacus manacus abditivus (not of BANGS) STONE, Proc. Acad. Nat. Sci. Philad., 1899, p. 306-Honda.

Manacus manacus flaveolus CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 486, 1917—Honda and Chicoral, upper Magdalena Valley (spec. examined).

Range: Arid Tropical Zone of the upper Magdalena Valley, in eastern Colombia.

2: Colombia (Bogotá 2).

Manacus manacus bangsi Chapman.² Bangs's Manakin.

¹Manacus manacus flaveolus Cassin: Nearest to M. m. abditivus, but the white portions of the plumage tinged with pale yellowish; rump slate olive instead of slate gray; abdomen olive gray. Wing (adult male) 49-53; tail 27-31.

The wing tip in this race is somewhat longer than in M. m. abditivus, thus more like the Pacific forms. Males from Bogotá and Chicoral (near Girardot) are strongly tinged with yellow (about naphthalene or sulphur yellow), and have the "chin-beard" hardly more developed than in M. m. manacus, while those from Honda in the latter respect resemble M. m. abditivus, which they also approach in their less yellowish coloring.

Material examined.—Bogotá 14; Bucaramanga 1; Chicoral, Coello River, Tolima 4; Honda 1; within twenty miles of Honda 5.

²Manacus manacus bangsi Chapman: Very similar to M. m. leucochlamys, but posterior under parts darker gray, this color sharply defined against the white chest, and "chin-beard" less elongated; female much darker green underneath than the neighboring races, and in coloration much like M. m. guiturosus, from which it is, of course, easily distinguished by its much shorter tail, narrower, less falcate outer primaries, and rather longer wing tip. Wing (adult male) 52-53; tail 251/2-27.

This race differs from M. m. abditivus, in the male sex, by shorter tail, more pointed wing, and much darker gray, strongly defined abdominal area, while in

70 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Manacus manacus bangsi Chapman, Bull. Amer. Mus. N.H., 33, p. 625, 1914—Barbacoas, Nariño, Colombia; idem, l.c., 36, p. 486, 1917—Barbacoas.

Range: Tropical Zone of the Pacific coast of southwestern Colombia (Barbacoas, state of Nariño).

*Manacus manacus leucochlamys Chapman.1 West Ecuadorian Manakin.

Manacus manacus leucochlamys Chapman, Bull. Amer. Mus. N.H., 33, p. 626, 1914—Esmeraldas, Ecuador; idem l.c., 55, p. 535, 1926—Esmeraldas, Manavi, and Bucay.

Manacus manacus maximus Chapman, Amer. Mus. Novit., 138, p. 7, 1924—Alamor, prov. Loja, southwestern Ecuador; idem, Bull. Amer. Mus. N.H., 55, p. 535, 1926—Naranjo, Bucay, Chimbo, Ríos Chimbo and Coco, Río Jubones, La Chonta, Santa Rosa, and Alamor.

Chiromachaeris manacus (not Pipra manacus Linnaeus) Sclater, P.Z.S. Lond., 28, p. 89, 1860—Nanegal; p. 279—Babahoyo; p. 296—Esmeraldas; Berlepsch and Taczanowski, l.c., 1883, p. 559—Chimbo; Sclater, Cat. B. Brit. Mus., 14, p. 313, 1888—part, spec. m-p, Santa Rita, Nanegal, Ecuador; Hartert, Nov. Zool., 5, p. 488, 1898—Paramba, Cachaví, Chimbo; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—part, Río Peripa; Goodfellow, Ibis, 1901, p. 709—"Archidona," errore, = western Ecuador.

Manacus manacus manacus Bangs, Proc. New Engl. Zool. Cl., 1, p. 34, 1899
—part, Guayaquil, Ecuador.

Manacus manacus Ménégaux, Miss. Serv. Géogr. Armée Mes. Arc Mérid. Equat., 9, p. B61, 1911—part, Gualea.

the development of the gular feathers it is intermediate between M. m. abditivus and M. m. leucochlamys. The deep slate gray belly reminds one of M. m. gutturosus, from which it can easily be told, however, by much shorter tail, narrower, less falcate outer primaries, and longer wing tip (fully 10 mm. long).

Material examined.-Colombia: Barbacoas, Nariño 5.

¹Manacus manacus leucochlamys Chapman: Male similar to M. m. interior, but with shorter tail; white nuchal collar wider; black dorsal area more restricted; slate gray of upper tail coverts spreading all over the rump; posterior under parts on average more whitish; wing tip and "chin-beard" as in M. m. interior.

Further subdivision of the west-Ecuadorian race seems to me impracticable, though males from Chimbo and southwards are as a rule somewhat whiter beneath, certain specimens recalling *M. m. trinitatis*. I do not find any constant difference in dimensions between skins from the north and south, although it must be admitted that two from Alamor have the wings one or two millimeters longer than any other example seen by me.

Length of wing (adult males).—Prov. Esmeraldas (San Javier, Paramba, etc.) 51-55 (twelve); Gualea 53-55 (three); Bucay 52-54 (four); Chimbo 53-55 (three); Ana María, Quevedo, prov. Guayas 54; Alamor, prov. Loja, 56, 57 (two).

An interesting individual variant, secured by G. Flemming at Paramba, on January 8, 1900, together with normally colored males of *leucochlamys*, is preserved in the collection of the Tring Museum. This bird has the white areas of the plumage even more strongly tinged with yellowish than *flaveolus*, while rump, upper tail coverts and abdomen are light olive green.

Material examined.—Western Ecuador (Esmeraldas to Alamor) 40.

Chiromachaeris manacus abditivus (not of BANGS) HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 23, 1910—part, western Ecuador.

Ranges: Western Ecuador, from Esmeraldas south to the province of Loja.

- 2: Ecuador (Puente de Chimbo, prov. Guayas 1; Pambílar, prov. Esmeraldas 1).
- *Manacus manacus gutturosus (Desmarest). Des marest's Manakin.

Range: Wooded region of southeastern Brazil, from Bahia to Paraná, and adjacent parts of eastern Paraguay (Puerto Bertoni) and northeastern Argentina (Misiones).

9: Brazil (Bahia 1; Santo Amaro, Bahia 7; Rio de Janeiro 1).

¹In addition to our own, the following specimens have been examined: Bahia 9; Victoria, Espirito Santo 2; Rio de Janeiro (Sapitiba, Rio) 5; São Paulo (various localities) 16.

Manacus vitellinus vitellinus (Gould). Gould's Manakin.

Pipra vitellina Gould, P.Z.S.Lond., 11, p. 103, Dec., 1843—Panama; idem in Hinds, Zool. Voy. Sulphur, Birds, p. 41, pl. 21, 1843—Panama; Lafresnaye, Rev. Zool., 10, p. 69, 1847—Panama.

Chiroxiphia vitellina LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 7, p. 296, 1862—Lion Hill, Panama Railroad.

Chiromachaeris vitellina(us) Sclater and Salvin, P.Z.S.Lond., 1864, p. 362—Lion Hill, Panama; Sclater, Cat. B. Brit. Mus., 14, p. 315, 1888—part, spec. a-k, "Nicaragua," "Veragua," Paraíso Station, Panama; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 114, 1890—"Veraguas," Lion Hill, Obispo, and Paraíso Station, Panama; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 339, p. 6, 1899—Punta de Sabana, Darién; Hellmayr in Wytsman, Gen. Av., Part 9, p. 23, 1910—part, Panama.

Manacus vitellina(us) Bangs, Proc. New Engl. Zool. Cl., 2, p. 22, 1900—Loma del León, Panama; Thayer and Bangs, Bull. Mus. Comp. Zool., 46, p. 217, 1906—Sabana de Panama; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 732, 1907—Panama and adjacent parts of Colombia; Stone, Proc. Acad. Nat. Sci. Philad., 70, p. 268, 1918—Gatún, Panama (nest and eggs descr.); Hallinan, Auk, 41, p. 318, 1924—Río Algarroba, Gorgona, Río Velasquez, and Corozal, Panama.

Manacus vitellinus vitellinus BANGS and BARBOUR, Bull. Mus. Comp. Zool., 65, p. 214, 1922—Río Esnape and Jesusito, Darién.

Range: Eastern Panama, from the Panama Railroad east to Darién.¹

*Manacus vitellinus viridiventris Griscom.2 Green-Bellied Manakin.

Manacus vitellinus viridiventris Griscom, Bull. Mus. Comp. Zool., 69, p. 179, 1929—"Jiminez" [= Jiménez], above Buenaventura, Pacific Colombia (type), and Cana, extreme eastern Panama.

Chiromachaeris vitellina (us) Sclater and Salvin, P.Z.S.Lond., 1879, p. 517—part, Cauca; Sclater, Cat. B. Brit. Mus., 14, p. 315, 1888—part, spec. l, m, Cauca; Hellmayr in Wytsman, Gen. Av., Part 9, p. 23, 1910—part,

¹Its occurence in western Panama (Veraguas) requires confirmation.

Material examined.—Panama: near Panama City 9; Panama Railroad 2;
Loma del León 9; Esnape 1, Jesusito, Darién 5.

²Manacus vitellinus viridiventris Griscom: Very similar to M. v. vitellinus, but male with breast and abdomen more solidly and darker green, near Warbler green; female above decidedly darker (between warbler green and olive green), and under parts more uniform warbler green, without pyrite yellow suffusion along the middle of the belly. Wing 53-55, (female) 54-56; tail 28-30; bill 10.

I do not find any constant difference in the color of the yellow portions of the plumage between *vitellinus* and *viridiventris*, though a few males of the latter slightly diverge in the direction of M. v. milleri.

According to Griscom (l.c.), specimens from Cana (upper Tuyra, Darién), while intermediate, are nearer to the present form than to typical vitellinus.

Material examined.—Colombia: Noanamá 6, Nóvita 4, San José 1, Buenaventura, Chocó 1; Florida, Cauca 1; Cauca Seca 2; Río Frío, Cauca, 1; Río Lima, Cauca 1.

western Colombia; idem, P.Z.S.Lond., 1911, p. 1141—Noanamá and Nóvita, Chocó, Colombia.

Manacus vitellinus vitellinus Chapman, Bull. Amer. Mus. Nat. Hist., 36, p. 487, 1917—Alto Bonito, Dabeiba, Río Sucio, Quibdó (Río Atrato), Juntas de Tamaná, Nóvita, Noanamá, Buenaventura, San José, Los Cisneros (Chocó), Río Frío, Guengué, and Cauca Seca (upper Cauca), Colombia.

Range: Western Colombia (Pacific coast and upper Cauca Valley) and north to extreme eastern Darién (Cana, upper Tuyra River).

2: Colombia (San José 1, Buenaventura 1).

Manacus vitellinus milleri Chapman. MILLER'S MANAKIN.

Manacus vitellinus milleri Chapman, Bull. Amer. Mus. N.H., 34, p. 645, 1915—Puerto Valdivia, lower Cauca; idem, l.c., 36, p. 487, 1917—Puerto Valdivia.

Chiromachaeris vitellina (not Pipra vitellina Gould) Sclater and Salvin, P.Z.S.Lond., 1879, p. 517, pl. 42, fig. 10 (egg)—part, Remedios.

Range: Northern Colombia, in the lower Cauca Valley and adjacent districts (Remedios, Río Ité).

*Manacus aurantiacus (Salvin).2 Salvin's Manakin.

Chiromachaeris aurantiaca Salvin, P.Z.S.Lond., 1870, p. 200—Mina de Chorcha and Bugaba, Chiriquí, Panama; Zeledón, An. Mus. Nac. Costa Rica, I, p. 118, 1887—Las Trojas, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 316, 1888—Bugaba, Mina de Chorcha, Chiriquí, and Veragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 115, pl. 41, figs, I, 2, 1890—Bugaba, Mina de Chorcha; Cherrie, Expl. Zool. en Costa Rica, 1890-91, p. 26, 1893—Palmar, Lagarto, Boruca, Térraba, and Buenos Aires, Costa Rica; Hellmayr in Wytsman, Gen. Av., Part 9, p. 23, 1910—Chiriquí and Costa Rica.

¹Manacus vitellinus milleri Chapman: Differs from M. v. vitellinus, in the male sex, by reason of much paler, lemon chrome (instead of between light cadmium and cadmium yellow) throat and foreneck, deepening into empire yellow or light cadmium on auriculars, sides of neck, and nuchal collar, and much lighter, pale olive yellow rather than pyrite yellow or warbler green abdomen, while the females are merely somewhat paler greenish on the anterior lower parts. Wing 52-53, (female) 53-56; tail 27-30.

It is rather singular that this well-marked race lives side by side with M. manacus abditivus, although the intermediate nature of its characters would seem to favor the theory that M. manacus and M. vitellinus are subspecifically related, inasmuch as representatives of the two groups otherwise replace each other geographically. The problem of their relationship is one of unusual interest and may have some bearing on the origin of specific units.

Material examined.—Colombia: Puerto Valdivia, lower Cauca 7.

²Manacus aurantiacus (SALVIN) almost certainly is merely a northern representative of *M. vitellinus*, but more information about the distribution of the two "species" in southern Central America (western Panama) is needed before the use of trinomials seems advisable.

74 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Manacus aurantiaca(us) BANGS, Auk, 18, p. 365, 1901—Divala, Panama; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 734, 1907—western Panama and Costa Rica; BANGS, Auk, 24, p. 303, 1907—Boruca, El Pozo, Paso Real, and Lagarto de Térraba, Costa Rica; CARRIKER, Ann. Carnegie Mus., 6, p. 683, 1910—southwestern Costa Rica (nest and eggs descr.).

Range: Southwestern Costa Rica (north to Las Trojas) and western Panama (Chiriquí and Veraguas).¹

6: Costa Rica (Buenos Aires 1, Boruca 3, Térraba 2).

*Manacus cerritus Peters.2 Almirante Manakin.

Manacus cerritus Peters, Proc. New Engl. Zool. Cl., 10, p. 9, 1927—Almirante Bay, northwestern Panama.

Range: Caribbean slope of northwestern Panama (Almirante Bay).

1: Panama (Changuinola 1).

*Manacus candei (Parzudaki). CANDÉ'S MANAKIN.

Pipra candei Parzudaki, Rev. Zool., 4, p. 306, 1841—Truxillo, Honduras; idem, Mag. Zool., (2), 5, cl. 2, pl. 45, 1843—Truxillo.

Manacus candei Sclater, P.Z.S.Lond., 24, p. 299, pl. 121, 1856—Córdoba, Vera Cruz, Mexico; Sumichrast, Mem. Boston Soc. Nat. Hist., 1, p. 558, 1869—Vera Cruz; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 730, 1907—southeastern Mexico to Costa Rica (monog., full bibliography); Carriker, Ann. Carnegie Mus., 6, p. 684, 1910—northern portion of Caribbean Costa Rica (habits); Peters, Auk, 30, p. 375, 1913—Xcopen and Camp Mengel, Quintana Roo; Rendahl, Ark. Zool., 12, No. 8, p. 23, 1919—San Juan del Norte, Nicaragua.

Manacus candaei Sclater and Salvin, Ibis, 1, p. 124, 1859—Honduras, Guatemala (Lake Petén), and Mexico (Córdoba, Vera Cruz); Richmond, Proc. U.S.Nat. Mus., 16, p. 509, 1893—Río Escondido, Nicaragua (habits); Dearborn, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 101, 1907—Puerto Barrios, Guatemala.

Chiromachaeris candaei Sclater, Cat. B. Brit. Mus., 14, p. 314, 1888— Honduras, Guatemala, British Honduras, Costa Rica; Salvin and God-Man, Biol. Centr.-Amer., Aves, 2, p. 114, 1890—Mexico to Costa Rica.

¹Although Sclater records both *M. vitellinus* and *M. aurantiacus* from "Veragua (Arcé)," Mr. Ludlow Griscom (in litt.) found only the latter form in the lowland forests throughout that province.

²Manacus cerritus Peters: Adult male nearest to M. v. vitellinus, but breast and abdomen mainly lemon chrome, though slightly shaded with greenish, especially on flanks and under tail coverts; median upper wing coverts pale yellow at base instead of uniform black; yellow nuchal collar wider and black dorsal area correspondingly less extensive; wing slightly longer. Wing 54-56; tail 35; bill 9.

By the yellow belly, lesser amount of black on the back, and partly yellow median upper wing coverts, this form approaches *M. aurantiacus*, but agrees with *M. vitellinus* in the deep black wings and tail without greenish edges and in the cadmium yellow instead of orange color of the nuchal collar, sides of head, throat, and chest. Like *M. aurantiacus*, it is probably a geographical race of *M. vitellinus*.

Material examined.—Panama: Changuinola 1.

Chiromachaeris candei HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 23, 1910—eastern Mexico to Costa Rica.

Manacus candei electilis BANGS, Proc. New Engl. Zool. Cl., 3, p. 106, 1903—Vera Cruz, Mexico.

Range: Southeastern Mexico (in states of Vera Cruz, Tabasco, and Chiapas, and territory of Quintana Roo), south through Guatemala, British Honduras, Honduras, and Nicaragua to northeastern Costa Rica.

7: Guatemala (Puerto Barrios 1, unspecified 2); Nicaragua (San Emilio, Lake Nicaragua 4).

Manacus coronatus (Boucard). Boucard's Manakin.

Chiromachaeris coronata Boucard, P.Z.S.Lond., 1879, p. 178, pl. 17—Colombia = Bogotá (type in Paris Museum examined); Sclater, Cat. B. Brit. Mus., 14, p. 316, 1888—Bogotá; Hellmayr in Wytsman, Gen. Av., Part 9, p. 23, 1910—Bogotá.

Range: Colombia (Bogotá).

Genus NEOPIPO Sclater and Salvin.

Neopipo SCLATER and SALVIN, P.Z.S.Lond., 1869, p. 438—type by orig. desig. Neopipo rubicunda SCLATER and SALVIN = Pipra cinnamomea LAWRENCE.

Neopipo cinnamomea cinnamomea (Lawrence). CINNAMON MANAKIN.

Pipra ? cinnamomea LAWRENCE, Proc. Ac. Nat. Sci. Phila., 1868, p. 429—"Upper Amazon."

¹Manacus coronatus (Boucard): Crown glossy black; forehead, cheeks, orbital region, auriculars, and nuchal collar lemon yellow (about the same shade as the abdomen of M. candei); back, wings and tail glossy black; chin white, slightly tinged with yellowish; throat and foreneck dull black, the whitish bases of the feathers showing through in the middle of the lower throat and suggesting an irregular pale patch; remainder of under parts dark gray, indistinctly flammulated with whitish. Bill horn brown, whitish below. Wing 57; tail 28; bill 10.

The type, a skin of the well-known Bogotá "make," is still unique in the Paris Museum. In structural characters, this singular bird stands somewhat between Pipra and Manacus. There is but a faint suggestion of the "beard," so conspicuous a feature in Manacus, the feathers of the chin being hardly more elongated than in Pipra erythrocephala. The outer primaries are neither so broad and straight as in Pipra nor strongly attenuated and incurved as in Manacus, but merely show a distinct sinuation along the inner web, while the tip is very slightly bent inwards. The wing is longer than in Manacus, but the tail about the same proportion. The bill is larger, particularly when viewed from below, than in Manacus, and its color, especially the pale lower mandible, also reminds one of Pipra. The gray uropygium, save for a few edges, is replaced by the black of the back, which is very nearly as strongly glossed with metallic blue as in Pipra erythrocephala, instead of being opaque (dull) as in Manacus. The markings of breast and abdomen give an abnormal impression. The feathers have a dingy white mesial stripe laterally margined with dark gray, these edges forming in places a kind of ill-defined streaking. I have little doubt this supposed species is nothing but a hybrid between Manacus manacus (subsp.) and one of the yellow-headed varieties of Pipra erythrocephala.

Neopipo rubicunda Sclater and Salvin, P.Z.S.Lond., 1869, p. 438, pl. 30, fig. 3—Chamicuros, Peru (type examined).

Neopipo cinnamomea Sclater and Salvin, P. Z. S. Lond., 1873, p. 283—Xeberos and Chamicuros, Peru; Taczanowski, Orn. Pér., 2, p. 346, 1884—same localities; Sclater, Cat. B. Brit. Mus., 14, p. 303, 1888—part, spec. a-e, Chamicuros, Peru and Sarayacu, Ecuador; Hellmayr, Nov. Zool., 14, p. 361, 1907; l.c., 17, p. 308, 1910—Humaythá, Rio Madeira; idem in Wytsman, Gen. Av., Part 9, p. 24, 1910—part, eastern Ecuador, Peru, and western Brazil; Chapman, Bull. Amer. Mus. N.H., 55, p. 536, 1926—Río Suno, Ecuador.

Neopipo cinnamomea cinnamomea HELLMAYR, Nov. Zool., 20, p. 247, 1913 (range, characters); idem, Arch. Naturg., 85, A, Heft 10, p. 65, 1920—Yahuarmayo, Carabaya, Peru.

Range: Upper Amazonia, from eastern Ecuador (Sarayacu, Río Suno) and eastern Peru (Chamicuros, Xeberos [= Jeveros], dept. Loreto; Yahuarmayo, Carabaya, dept. Puno) east to western Brazil (Humaythá, left bank of the Rio Madeira).

Neopipo cinnamomea helenae McConnell.2 HELENA'S MANAKIN.

Neopipo helenae McConnell, Bull. Brit. Orn. Cl., 27, p. 105, 1911—Ituribisce, British Guiana (type examined); Chubb, Birds Brit. Guiana, 2, p. 262, pl. 4, fig. 1, 1921—Ituribisi and Makauria Rivers.

Neopipo cinnamomea (not of LAWRENCE) SALVIN, Ibis, 1885, p. 301—Camacusa, Brit. Guiana (spec. examined); SCLATER, Cat. B. Brit. Mus., 14, p. 303, 1888—part, spec. f,g, Camacusa; BERLEPSCH, Nov. Zool., 15, p. 138, 1908—Ipousin, Approuague River, French Guiana (spec. examined); Hellmayr in Wytsman, Gen. Av., Part 9, p. 24, 1910—part, "Cayenne" and British Guiana.

Neopipo cinnamomea helenae HELLMAYR, Nov. Zool., 20, pp. 246, 247, 1913—British and French Guiana (char., crit.).

Range: French and British Guiana.

¹Material examined.—Ecuador: Sarayacu 1.—Peru: Chamicuros 3, Yahuarmayo 1.—Brazil: Humaythá, Rio Madeira 1.

² Neopipo cinnamomea helenae McConnell: Very close to N. c. cinnamomea, but upper back duller, less cinnamomeous, with a grayish cast; lores grayish white instead of buff; sides of head pale grayish olive, not deep buff; under parts on average paler. Wing 50-52; tail 36-38; bill 7-8.

Three adult males have a large yellow crown patch, tipped with olive gray, while in the single female examined there is but a small cinnamon vertical spot to be seen. I have little doubt that the same sexual difference obtains in typical cinnamomea, although no female examples have been available for comparison. The coloration of the lower parts is not diagnostic. A male from Ipousin has the throat paler buffy than any other specimen seen (though by no means grayish white), but the type and another from Camacusa do not differ in this respect from typical cinnamomea.

Material examined.—French Guiana: Ipousin, Approuague River 1.—British Guiana: Ituribisce River (type) 1, Camacusa 2.

Genus MASSORNIS Oberholser.

Schiffornis (not of Bonaparte, 1854) Des Murs in Castelnau, Expéd. Amér. Sud, Ois., livr. 18, p. 66—June, 1856—type by monotypy Schiffornis major Des Murs.

Massornis Oberholser, Auk, 37, p. 455, 1920—type by orig. desig. Schiffornis major Des Murs.

Massornis major (Des Murs). GREATER MANAKIN.

Schiffornis major Des Murs² in Castelnau, Expéd. Amér. Sud, Ois., livr. 18, p. 66, pl. 18, fig. 2, June, 1856—Sarayacu, Peru (type in Paris Museum examined); Hartlaub, Journ. Orn., 5, p. 47, 1857 (German translation of original description); Sclater and Salvin, P.Z.S.Lond., 1866, p. 190—Nauta, Peru; idem, l.c., 1873, p. 284—Nauta; Taczanowski, Orn. Pér., 2, p. 352, 1884—Sarayacu and Nauta; Sclater, Cat. B. Brit. Mus., 14, p. 323, 1888—"Oyapoc, Cayenne," Nauta and Samiria, Peru; Ihering, Rev. Mus. Paul., 6, p. 435, 1905—Rio Juruá (spec. examined); idem, Cat. Faun. Braz., 1, p. 304, 1907—Rio Juruá; Snethlage, Journ. Orn., 56, p. 12, 1908—Bom Lugar, Rio Purús; Berlepsch, Nov. Zool., 15, p. 139, 1908—"Oyapoc, Cayenne" (ex Sclater); Hellmayr, l.c., 14, p. 362, 1907—Borba, Rio Madeira (crit.); idem, l.c., 17, p. 310, 1910—Calama, Santa Izabel (Rio Preto), Jamarysinho (Rio Machados), Rio Madeira; idem in Wytsman, Gen. Av., Part 9, p. 25, 1910—Amazonia; Snethlage, Bol. Mus. Goeldi, 8, p. 371, 1914—Bom Lugar, Rio Purús.

Heteropelma rufum Pelzeln, Orn. Bras., 2, pp. 124, 185, Sept., 1868—Borba, Rio Madeira, and Rio Amajaú, Rio Negro (spec. in Vienna Museum examined).

Schiffornis rufa Sclater, Cat. B. Brit. Mus., 14, p. 323, 1888—Rio Amajaú; Snethlage, Journ. Orn., 61, p. 525, 1913—lower Jamundá; idem, Bol. Mus. Goeldi, 8, p. 371, 1914—Rio Jamundá, Faro.

Range: Northern Brazil, on both sides of the lower Amazon, east to the Tapajóz (Santarém) and Jamundá (Faro), north to the Rio Negro, south to the Rio Machados; and eastern Peru (Nauta, Samiria; Sarayacu, lower Ucayali).

¹The supposed two species are merely individual variants, both gray-capped and rufous-capped specimens, together with every possible intermediate stage, being found on the Rio Amajaú, Rio Madeira, at Santarém, along the Rio Solimões, and in eastern Peru.

Material examined.—Brazil: Santarém 4; Rio Amajaú (Rio Negro) 4; Rio Madeira, Borba 3, Calama 2; Santa Izabel, Rio Preto 1; Jamarysinho, Rio Machados 1; Rio Juruá 1; Fonte Bôa, Rio Solimões 3.—Peru: Sarayacu (the type) 1, Nauta 1, Samiria 2.

²Schiffornis major Bonaparte (Ateneo Italiano, 2, No. 11, p. 314, 1854; Consp. Voluc. Anisod., p. 4, 1854) is a nomen nudum.

The locality "Oyapoc, Cayenne" is open to doubt.

Genus SCHIFFORNIS Bonaparte.

- Schiffornis Bonaparte, Ateneo Italiano, 2, No. 11, p. 314 (=Consp. Voluc. Anisod., p. 4), 1854—type virtually by monotypy Muscicapa turdina Wied.¹
- Heteropelma (not of Wesmaël, 1840) Bonaparte, l.c., p. 314 (=Consp. Voluc. Anisod., p. 4), 1854—type by subs. desig. (Gray, 1855, p. 56) "Pipra unicolor Menetr." = Heteropelma unicolor Bonaparte.
- Scotothorus Oberholser, Proc. Ac. Nat. Sci. Phila., 1899, p. 208—new name for Heteropelma Bonaparte nec Wesmaël.

Schiffornis virescens (Lafresnaye). GREENISH MANAKIN.

- Muscicapa virescens (not of TEMMINCK, 1824) WIED, Beitr. Naturg. Bras., 3, (2), p. 802, 1831—Arrayal da Conquista, southern Bahia.
- Ptil[ochloris] virescens Lafresnaye, Rev. Zool., 1, p. 238, 1838—type from "Brésil" (=Rio de Janeiro), coll. Delalande, in Paris Museum examined.
- Heteropelma unicolor Bonaparte, Ateneo Italiano, 2, No. 11, p. 314 (=Consp. Voluc. Anisod., p. 4), 1854—new name for Ptilochloris virescens La-FRESNAYE.
- Muscicapa viridis Pucheran,³ Arch. Mus. Hist. Nat. Paris, 7, livr. 3, p. 370, 1855—type from "Brésil," coll. A. DE SAINT-HILAIRE, in Paris Museum examined.
- Pipra morenoana Bertoni, Anal. Cient. Parag., Ser. 1, No. 1, p. 104, 1901—Djaguarasapá, Paraguay.
- Heteropelma virescens Sclater, P.Z.S.Lond., 28, p. 467, 1860—southeastern Brazil; Pelzeln, Orn. Bras., 2, p. 124, Sept., 1868—Ypanemá, São Paulo and Curytiba, Paraná; idem, Nunq. Otios., 2, p. 292, 1874—Nova Friburgo, Rio; Cabanis, Journ. Orn., 22, p. 90, 1874—Cantagallo, Rio; Berlepsch and Ihering, Zeits. Ges. Orn., 2, p. 139, 1885—Taquara and Linha Pirajá, Rio Grande do Sul; Sclater, Cat. B. Brit. Mus., 14, p. 321, 1888—Brazil; Allen, Bull. Amer. Mus. N.H., 2, p. 237, 1889—Arrayal da Conquista, Bahia (note on Wied's type); Ihering, Annuario Est. Rio Grande do Sul, 16, p. 127, 1899—[Taquara do] Mundo Novo; Ihering, Rev. Mus. Paul., 3, p. 210, 1899—Iguapé, São Paulo; idem, l.c., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio.
- Scotothorus unicolor Oberholser, Proc. Ac. Nat. Sci. Phila., 1899, pp. 208, 209 (nomencl.); Ihering and Ihering, Cat. Faun. Braz., 1, p. 303, 1907—Campos do Jordão, Ubatuba, Alto da Serra, Jundiahy, Itatiba, Itararé, Itapura, Iguapé, and São Paulo, Est. São Paulo; Hellmayr in Wytsman,

¹See OBERHOLSER, Auk, 45, p. 454, 1920.

²Ptilochloris virescens being independently described as a new species, there is no reason for rejecting the specific name, which is by no means affected by the earlier Muscicapa virescens Temminck. The case would be quite different if Lafresnaye had merely transferred Muscicapa virescens Wied to the genus Ptilochloris.

³Muscicapa viridis Lesson (Traité d'Orn., p. 384, 1831—Brésil, coll. SAINT-HILAIRE) is a nomen nudum.

Gen. Av., Part 9, p. 27, pl. 1, fig. 7, 1910—Bahia to Rio Grande do Sul; Chubb, Ibis, 1910, p. 601—Sapucay, Paraguay; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 313, 1910—Alto Paraná, Paraguay; Bertoni, Fauna Parag., p. 58, 1913—Alto Paraná; Sztolcman, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 178, 1926—Cara Pintada, Vermelho, Therezina, Candido de Abreu, and Salto Guayra, Paraná; Holt, Bull. Amer. Mus. N.H., 57, p. 309, 1928—Serra do Itatiaya.

Range: Wooded region of southeastern Brazil, from extreme southern Bahia (Cidade da Conquista) south to Rio Grande do Sul, and Paraguay.¹

Schiffornis turdinus turdinus (Wied).2 THRUSH-LIKE MANAKIN.

- Muscicapa turdina Wied, Beitr. Naturg. Bras., 3, (2), p. 817, 1831—eastern Brazil (the type, now in the American Museum of Natural History, New York, is from Bahia).
- Muscicapa rufo-olivacea LAFRESNAYE, Mag. Zool., 3, cl. 2, text to pl. 13 [p. 3], 1833—no locality given.
- Ptilochloris rufo-olivaceus LAFRESNAYE, Rev. Zool., 1, p. 238, 1838; idem, l.c., 10, p. 185, 1847—Brazil.
- Heteropelma turdinum SCLATER, P.Z.S.Lond., 28, p. 467, 1860—southeastern Brazil; PELZELN, Orn. Bras., 2, p. 124, 1868—"Brazil" = Bahia (spec. in Vienna Museum examined); SCLATER, Cat. B. Brit. Mus., 14, p. 319, 1888—Bahia; ALLEN, Bull. Amer. Mus. N.H., 2, p. 236, 1889—Bahia (note on Wied's type).
- Scotothorus turdinus IHERING and IHERING, Cat. Faun. Braz., 1, p. 302, 1907—Bahia.

- Scotothorus turdinus amazonum (not of SCLATER) LIMA, Rev. Mus. Paul., 12, (2), p. 100, 1920—Ilhéos to Belmonte, southern Bahia.

Range: Eastern Brazil, in the southern section of the state of Bahia (exact limits unknown).

Schiffornis turdinus wallacii (Sclater and Salvin).3 WALLACE'S MANAKIN.

¹This species of which fifteen specimens from Minas Geraes (São Francisco) to Rio Grande do Sul have been examined is perhaps subspecifically related to the S. turdinus group, but until we acquire a better knowledge of their ranges it is impossible to say whether S. virescens and S. t. turdinus, both recorded from Bahia, live side by side or inhabit different areas.

²This is the largest form of the genus, the wing ranging from 96 to 102 mm., with strong, heavy bill. In coloration, it is nearest to S. l. amazonus, but paler below, with a slight brownish tinge on throat and foreneck.

Five trade skins from Bahia examined.

*Schiffornis turdinus wallacii (SCLATER and SALVIN): Very close to S. t. amazonus, but upper parts more greenish, with very little, if any, rufescent tinge

Heteropelma surinamensis PENARD and PENARD, Vog. Guyana, 2, p. 197, 1910—Surinam.

Scotothorus amazonum wallacii Hellmayr, Nov. Zool., 13, p. 363, 1906—Santo Antonio do Prata, Pará; Berlepsch, Nov. Zool., 15, pp. 139, 320, 1908—Oyapock and Saint Jean du Maroni, French Guiana; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 73, 1918—Paramaribo, Surinam.

Scotothorus turdinus wallacii Hellmayr, Nov. Zool., 17, p. 311, 1910—Pará district, Saint Jean du Maroni (French Guiana), and near Paramaribo, Surinam (char., crit.); idem in Wytsman, Gen Av., Part 9, p. 26, 1910—Pará; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 90, 1912—Pará and Santo Antonio, Pará; Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 168, 1928—Pará.

Scotothorus turdinus olivaceus (not of RIDGWAY) HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 26, 1910—part, Cayenne.

Scolothorus wallacii Snethlage, Bol. Mus. Goeldi, 8, p. 370, 1914—Pará, Providencia, Ananindeua, Rio Tocantins (Alcobaça), Rio Xingú (Victoria), Rio Jary (Santo Antonio da Cachoeira), Rio Jamundá (Faro); idem, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 63, 1926—Tury-assú, Maranhão.

Range: Northern Brazil, on the lower Amazon, from northern Maranhão west to the Xingú and Jamundá rivers, north to French and Dutch Guiana.

Schiffornis turdinus olivaceus (Ridgway). OLIVACEOUS MANAKIN.

Scotothorus olivaceus RIDGWAY, Proc. Biol. Soc. Wash., 19, p. 118, 1906—Río Mato, Caura, Venezuela; CHUBB, Birds Brit. Guiana, 2, p. 264, 1921—British Guiana (numerous localities).

Heteropelma amazonum? (not of SCLATER) SALVIN, Ibis, 1885, p. 301—Bartica Grove, Camacusa, Carimang River, and Roraima, British Guiana (spec. examined).

on the crown; ventral surface paler, more grayish olive; the throat but slightly, if at all, shaded with brownish.

Two specimens from French and Dutch Guiana appear to agree with topotypes.

Material examined.—Brazil: Pará (the type) I, Santo Antonio do Prata, Pará 5.—French Guiana: Saint Jean du Maroni I.—Dutch Guiana: near Paramaribo (authentic specimen of H. surinamensis) I.

¹Schiffornis turdinus olivaceus (RIDGWAY): Somewhat intermediate between S. t. wallacii and S. t. amazonus; differing from the former by more brownish olive back, and much more brownish throat and foreneck; from the latter by slightly paler back, less cinnamomeous pileum, and more grayish (less olivaceous) belly.

Material examined.—Venezuela: La Pricion, Caura I; Nicare, Caura I; Río Yuruán (Carnegie Museum, No. 33866) 1.—British Guiana: Caramang River I, Bartica Grove I, Camacusa 3, Roraima I, unspecified 2.

Zool., 17, pp. 310, 311, 1910—Calama, Allianca, Borba, Rio Madeira and Maroins, Rio Machados (crit., range); Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 249, 1916—Munduapo and Nericagua, Orinoco River.
- Scotothorus turdinus amazonus Snethlage, Journ. Orn., 56, p. 12, 1908—Bom Lugar, Rio Purús; Chapman, Bull. Amer. Mus. N.H., 55, p. 537, 1926—Zamora, Sabanilla, lower Sumaco, Macas, San José, and below San José, Ecuador.

¹Based on a single specimen in the Georgetown Museum, no doubt an individual variant, with scattered yellowish feathers on pileum and throat.

Range: Upper Amazonia, from the upper stretches of the Orinoco in Venezuela (Munduapo, Nericagua) and eastern Ecuador through eastern Peru and western Brazil south to the Urubamba Valley and western Matto Grosso, east to the Rio Negro and Rio Madeira.¹

1: Peru (Huachipa, dept. Huánuco 1).

Schiffornis turdinus steinbachi Todd.² Steinbach's Manakin.

Schiffornis turdinus steinbachi Todd, Proc. Biol. Soc. Wash., 41, p. 113, 1928
—Río Yapacani, Provence del Sara, Bolivia.

Scotothorus amazonum (not of Sclater) Berlepsch and Stolzmann, Ornis, 13, p. 114, 1906—Chontapunco and Río Cadena, Marcapata, Peru.

Schiffornis turdinus amazonum Hellmayr, Arch. Naturg., 85, A, Heft 10, p. 65, 1920—Chaquimayo, Carabaya, Peru.

Range: Northern Bolivia and extreme southeastern Peru (Marcapata Valley and northern slope of Sierra de Carabaya, dept. Puno).

Schiffornis turdinus rosenbergi (Hartert).3 Rosenberg's Manakin.

Heteropelma rosenbergi Hartert, Nov. Zool., 5, p. 489, 1898—Cachabí, prov. Esmeraldas, Ecuador (type in Tring Museum examined); Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—Río Peripa.

¹Birds from eastern Ecuador, Venezuela, and the upper Rio Negro (Marabitanas, Rio Xié) agree well together, being brownish olive above, with the crown more or less rufescent, while the under parts are decidedly olivaceous, washed with brownish on throat and foreneck. Specimens from the Rio Madeira and its headwaters in Matto Grosso are as a rule more olive, less brownish on the dorsal surface, and somewhat paler, more grayish olive on the belly. Apart from certain individuals, which closely approach S. t. wallacii, they appear to be inseparable from Peruvian skins. If the present race requires subdivision, it is the birds from north of the Marañón that should be separated. By naming S. t. intercedens, Mr. Todd, it seems to me, has merely redescribed typical amazonus.

Material examined.—Venezuela: Munduapo 2; Neiraszua I.—Ecuador: Sarayacu 2.—Brazil: Rio Xié I; Marabitanas, Rio Negro 5; Rio Madeira, Borba 5, Calama 2, Allianca I, Humaythá 4; Maroins, Rio Machados 2; Villa Maria [=São Luiz de Caceres] I, Engenho do Gama, Rio Guaporé, Matto Grosso I.—Peru: Chamicuros, I; Huachipa I.

²Schiffornis turdinus steinbachi Todd: Closely similar to S. t. amazonus, but brown of the throat and chest deeper, more strongly contrasted with the rest of the lower parts, which are more greenish (olive) than in amazonus; upper parts slightly less brownish.

Material examined.—Bolivia, Yungas of Cochabamba: Río San Mateo 3, Iuntas I.—Peru: Chaquimayo, Carabaya I.

*Schiffornis turdinus rosenbergi (HARTERT): Closely similar to S. t. amazonus, but on average smaller; upper and under parts more uniform as well as more greenish olive; the rufescent tinge on the crown barely suggested; the throat but faintly shaded with brownish; outer aspect of the wings less rufous. Wing 85-88; tail 63-68; bill 13-14.

Material examined.—Ecuador: Cachaví (the type) I, Río Verde 2, Lita I, Paramba I, Cachyjacú I, Mindo I, Chimbo I; La Puente, prov. del Oro I; Alamor,

prov. Loja 1.

 - Schiffornis amazonus stenorhynchus Todd and Carriker, Ann. Carnegie Mus., 14, p. 333, 1922-Bonda, Las Vegas, Don Diego, Pueblo Viejo, and Tucurinca, Santa Marta region, Colombia.

Schiffornis turdinus stenorhynchus (SCLATER and SALVIN): Allied to S. t. amazonus, but larger, with slenderer and paler (horn brown rather than blackish) bill; upper parts much more brownish (Dresden brown to Saccardo's umber), pileum more strongly tinged with rufescent; breast and abdomen much paler grayish olive. From S. t. verae-pacis it may be distinguished by larger size, slenderer bill; much more brownish upper surface, with Brussels brown pileum; much paler and grayer (grayish olive instead of citrine drab or buffy olive) lower parts, and by having the throat and chest more decidedly tinged with tawny olive or cinnamomeous. Wing 90-97, (female) 89-92; tail 64-72, (female) 63-64; bill 14-15.

Certain specimens, in size, closely approach S. t. turdinus.

Material examined.—Venezuela: San Esteban (the types) 2, Cumbre de Valencia, Carabobo 1; El Hacha, Bolívar Railroad, Lara 1; Lagunita de Aroa, Lara 2; Azulita, Mérida 1.—Colombia, Santa Marta region: Bonda 2, Las Vegas 4, Don Diego 2, Pueblo Viejo 1, Tucurinca 1; El Consuelo, above Honda, Magdalena Valley 1.

84 FIELD MUSEUM OF NATURAL HISTORY-ZOOLOGY, VOL. XIII.

Range: Northern Venezuela (in states of Carabobo, Lara, and Mérida) and eastern Colombia (Santa Marta region; Magdalena Valley, south to El Consuelo, above Honda).

Schiffornis turdinus panamensis subsp. nov. Panama Manakin.

Range: Lower Tropical Zone of eastern Panama from the Canal Zone east to the Río Sambú.

Schiffornis turdinus furvus (Ridgway).2 SWARTY MANAKIN.

Scotothorus furvus RIDGWAY, Proc. Biol. Soc. Wash., 19, p. 118, 1906—Boquete de Chitrá, Veraguas, Panama; idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 761, 1907—"Pacific slope of western Panama."

1 Schiffornis turdinus panamensis subsp. nov.

Type from El Real, Río Tuyra, eastern Panama, in American Museum of Natural History, New York. No. 135027. Adult female. December 29, 1914. W. B. Richardson.

Characters.—Most nearly related to S. turdinus stenorhynchus and about the same size, but immediately recognizable by its much more saturated coloration; upper parts much darker and more rufescent (Brussels brown to raw umber instead of Dresden brown to Saccardo's umber), the edges to the wings deeper, more auburn, and the crown more rufous (cinnamon brown to Argus brown rather than Brussels brown); throat and chest much darker, buckthorn or antique brown rather than tawny olive; breast and abdomen slightly more olivaceous; bill as a rule stouter. Wing 90-96, (female) 85-92; tail 64-72, (female) 60-65; bill 13½-15.

Remarks.—Although heretofore united with S. t. stenorhynchus, of northwestern South America, this form proves to be easily separable by its much darker coloring, the deep tawny brown throat and chest, strongly contrasting with the olivaceous abdomen, being the most striking feature. Three specimens from the Panama Railroad, collected by McLeannan, agree precisely with a series from Darién.

Material examined.—Panama: Panama Railroad 3; El Real, Río Tuyra 7, Tapalisa (400 ft.) 1, Chepigana 1; Mount Sapo 3, Río Esnape 1, Jesusito, Darién 1.

²Schiffornis turdinus furvus (RIDGWAY): Nearest to S. t. verae-pacis, but somewhat darker, more tawny olive above, with the crown slightly more rufescent; under parts likewise deeper, throat and foreneck more strongly tinged with brownish. In coloration not unlike S. t. rosenbergi, but much larger, with heavier,

Heteropelma verae pacis (not of Sclater and Salvin) Salvin, P.Z.S.Lond., 1870, p. 200—part, Castillo and Calovevora, Veragua; Sclater, Cat. B. Brit. Mus., 14, p. 320, 1888—part, spec. l-o, Calovevora, Veragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 116, 1890—part, Chitrá, Castillo, and Calovevora, Veragua.

Scotothorus turdinus furvus HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 26, 1910—Veragua.

Range: Western Panama (Veraguas, except coastal forests of Pacific slope), extending east to the upper Tropical Zone of Mount Tacarcuna, in eastern Panama.

*Schiffornis turdinus verae-pacis (Sclater and Salvin). Brown Manakin.

Heteropelma verae-pacis Sclater and Salvin, P.Z.S.Lond., 28, p. 300, 1860—Choctum, Vera Paz, Guatemala; Sclater, l.c., p. 467—Guatemala; Salvin, l.c., 1870, p. 200—part, Bugaba and Volcán de Chiriquí; Sclater, Cat. B. Brit. Mus., 14, p. 320, 1888—part, spec. a-k, p, q, Choctum, Vera Paz, Yzabel, Guatemala, Costa Rica, Volcán de Chiriquí, and Bugaba; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 116, 1890—part, southern Mexico to Chiriquí (excl. Veraguan localities).

Scotothorus verae-pacis verae-pacis RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 758, 1907—southeastern Mexico, Guatemala, western and central Honduras (monog., full bibliography).

Scotothorus verae-pacis Dearborn, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 101, 1907—Los Amates, Guatemala; Bangs, Proc. Biol. Soc. Wash., 22, p. 32, 1909—Costa Rica (crit.); Carriker, Ann. Carnegie Mus., 6, p. 677, 1910—Costa Rica (numerous localities, habits, crit.).

Scotothorus verae pacis dumicola Bangs, Proc. New Engl. Zool. Cl., 3, p. 103, 1903—Divala, Chiriquí (type examined); idem, Auk, 24, p. 303, 1907—El Pozo del Río Grande, Costa Rica; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 759, 1907—coast of British Honduras to Panama.

stronger bill; crown, throat, and chest as a rule more rufescent. Wing 90-95, (female) 86-90; tail 68-75, (female) 62-67; bill 14-16.

In the light of the splendid series supplied by the American Museum of Natural History, this race proves to be much less distinct from S. t. verae-pacis, of Central America, than was supposed by its describer who based his diagnosis upon a single example. Ten skins obtained by H. E. Anthony, D. S. Ball, and W. B. Richardson in the upper Tropical Zone of Mount Tacarcuna, eastern Panama, at altitudes of from 3600 to 4600 feet, are evidently inseparable from a topo-typical Veraguan series, though averaging slightly larger. They are, however, very different from S. t. panamensis, which Richardson secured on the Río Tuyra and even at Tapalisa (400 ft.), on the lower slopes of Mount Tacarcuna, because of much larger, blacker bill and decidedly greenish olive (not brownish) coloration. The upper parts vary between dark citrine and medal bronze, with the crown hardly more reddish than the back, and the wing edgings are duller, Prout's brown rather than auburn, while the ventral surface ranges from dull citrine to dark citrine, with a slight olive tawny or medal bronze tinge on the anterior parts.

Material examined.—Panama, Veraguas: Santa Fé (1600 to 2200 ft.) 4, Guaval, Río Calovevora 7; Mount Tacarcuna (3600 to 4600 ft.), Darién 10.

Scotothorus turdinus verae-pacis Hellmayr in Wytsman, Gen. Av., Part 9, p. 26, 1910—Guatemala to Chiriquí.

Range: Southeastern Mexico, in state of Vera Cruz (Playa Vicente), and southwards through Guatemala, British Honduras, Honduras, and Costa Rica to western Panama (including the coastal forests of western Veraguas).

4: Guatemala (Vera Paz 1, Los Amates, Izabal 1); Costa Rica (Tuis 1, Boruca 1).

Genus SAPAYOA Hartert.2

Sapayoa Hartert, Nov. Zool., 10, p. 117, 1903—type by orig. desig. Sapayoa aenigma Hartert.

*Sapayoa aenigma Hartert.3 ENIGMA MANAKIN.

Sapayoa aenigma Hartert, Nov. Zool., 10, p. 117, 1903—Río Sapayo, prov. Esmeraldas, Ecuador (type in Tring Museum examined;=female); Hellmayr in Wytsman, Gen. Av., Part 9, p. 28, pl. 1, figs. 5, 8, 1910—Río Sapayo; idem, P.Z.S.Lond., 1911, p. 1141—Nóvita and Noanamá, Chocó, Pacific Colombia (descr. of adult male and young); Chapman, Bull. Amer. Mus. N.H., 36, p. 488, 1917—Baudó, Noanamá, and Barbacoas, Colombia; idem, l.c., 55, p. 538, 1926 (range); Bangs and Barbour, Bull. Mus. Comp. Zool., 65, p. 215, 1922—Mount Sapo, Darién; Griscom, l. c., 69, p. 180, 1929—Cana Darién.

Range: Tropical Zone of the Pacific coast from eastern Panama (Mount Sapo and Cana, Darién) to northwestern Ecuador (Prov. Esmeraldas).

1: Panama (Mount Sapo 1).

¹There is so much individual variation within the same locality that the discrimination of more than one form in Central America seems impracticable. Birds from the coastal forests of western Veraguas very slightly approach S. t. furvus.

Material examined.—Guatemala (Choctum, Los Amates) 4; Manatee Lagoon, British Honduras 5; San Pedro Sula, Honduras 3; Costa Rica 17; Divala, Chiriquí (including the type of S. v. dumicola) 2; Cerro Montosa, Veraguas 3; Wilcox Camp, San Lorenzo River, Veraguas 3.

²Sapayoa HARTERT.

Superficially resembling *Schifornis*, but easily distinguished by much wider, more depressed, distinctly uncinate bill, with more numerous, stronger as well as more rigid rictal bristles; circular, entirely exposed nostrils; much shorter, slenderer tarsus, with its upper half feathered, etc.

³Sapayoa aenigma HARTERT: General coloration light olive green, more yellowish green underneath; wings and tail dusky, exteriorly edged with color of back; adult male with a large, semiconcealed yellow crown patch. Wing 81-82, (female) 79-82; tail 61-66, (female) 59; bill 15.

Material examined.—Panama: Mount Sapo 4.—Colombia: Nóvita, Río Tamaná I, Noanamá, Río San Juan, Chocó 3.—Ecuador: Río Sapayo, prov. Esmeraldas (the type) I.

Genus NEOPELMA Sclater.

Neopelma Sclater, P.Z.S.Lond., 28, p. 467, 1860—type by monotypy Muscicapa aurifrons Wied.

Neopelma aurifrons (Wied). WIED'S MANAKIN.

- Muscicapa brevipes Wied, Beitr. Naturg. Bras., 3, (2), p. 831, 1831—south-eastern Brazil (type in American Museum of Natural History, New York, examined; = juv.).
- Muscicapa luteocephala (not of Lesson, 1830) LAFRESNAYE, Mag. Zool., 3, cl. 2, pl. 13, 1833—no locality given (the type examined in the Paris Museum is from Minas Geraes, coll. A. de Saint-Hilaire); Hellmayr, Nov. Zool., 13, p. 327, 1906 (crit.).
- Euscarthmus aurifrons Burmeister, Syst. Übers. Th. Bras., 2, p. 489, 1856—"Bahia" (ex Wied).
- Heteropelma aurifrons Sclater, P.Z.S.Lond., 28, p. 467, 1860—part, Brazil; Pelzeln, Orn. Bras., 2, p. 125, 1868—Ypanemá, São Paulo (specexamined); idem, Nunq. Otios., 2, p. 292, 1874—Nova Friburgo, Rio.
- Neopelma aurifrons Sclater, Cat. B. Brit. Mus., 14, p. 323, 1888—Brazil; Allen, Bull. Amer. Mus. N.H., 2, p. 237, 1889 (crit. notes on Wied's types); Ihering, Rev. Mus. Paul., 3, p. 210, 1899—Santo Amaro and Ypiranga, São Paulo; idem, l.c., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 304, 1907—Alto da Serra, Itatiba, and Ypiranga, São Paulo; Hellmayr in Wytsman, Gen. Av., Part 9, p. 28, pl. 1,fig. 9, 1910—southeastern Brazil; Holt, Bull. Amer. Mus. N.H., 57, p. 309, 1928—Serra do Itatiaya.

Range: Wooded region of southeastern Brazil, from São Paulo north to Rio de Janeiro, southern Minas Geraes, and (according to Wied) even to southern Bahia (Camamú, south of Bahia City).

¹The type of *M. luteocephala* LAFR. agrees with specimens from Rio and São Paulo. I am not so certain, however, that *M. aurifrons* of Wied is quite the same. The original example courteously lent by Dr. F. M. Chapman has slightly longer wings, a much larger bill, and the upper part of the head distinctly tinged with grayish, which I never noticed in southern specimens. The type of *M. brevipes* is a very young bird, with undeveloped bill, partly in the downy juvenile plumage, without trace of the yellow vertical patch, as has already been pointed out by the late J. A. Allen, and judging from the grayish forehead, I should unhesitatingly refer it to the same form as the type of *M. aurifrons*.

Thirteen specimens (Minas, Rio, São Paulo) measure as follows: wing 65-68, (female) 62-64; tail 58-60, (female) 55-57; bill 10.

Type of M. aurifrons Wied: wing 70; tail 56; bill 11.

Material examined.—Bahia: Camamú (type of M. aurifrons) 1.—Minas Geraes (type of M. luteocephala) 1.—Rio de Janeiro: Nova Friburgo 1.—São Paulo: Ipanemá 9, Victoria 2.—"Brazil" (type of M. brevipes) 1.

Scotothorus sulphureiventer Hellmayr, Verh. Zool. Bot. Ges., 53, pp. 202, 203, 1903—[Villa Bella de] Matto Grosso, Matto Grosso (type)and San Mateo, Bolivia.

Heteropelma chrysocephalum Pelzeln, Orn. Bras., 2, pp. 125, 185, 1868—part, descr. of supposed jun. and hab. Matto Grosso (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 322, 1888—Matto Grosso; Hellmayr in Wytsman, Gen. Av., Part 9, p. 27, 1910—Matto Grosso and northern Bolivia.

Range: Southwestern Brazil, in western Matto Grosso (Villa Bella de Matto Grosso), and northern Bolivia (Río San Mateo; Todos Santos, Río Chaparé).

4: Bolivia (Todos Santos, Río Chaparé 4).

*Neopelma chrysocephalum (Pelzeln).2 Orange-crested Manakin.

Heteropelma chrysocephalum Pelzeln, Orn. Bras., 2, pp. 125, 185, 1868—part, descr. of adult and hab. San Carlos, Rio Guainia, Venezuela (type), Marabitanas, Rio Negro, and Rio Içanna, Brazil (spec. examined).

Heteropelma igniceps Sclater, P.Z.S.Lond., 1871, p. 750, pub. March, 1872—Oyapoc, "Cayenne"; idem, l.c., 1881, p. 214—Essequibo and Corentyne River, common on the "Rupumini" [=Rupununi] Savannahs, British Guiana; Salvin, Ibis, 1885, p. 301—Camacusa and Roraima; Sclater, Cat. B. Brit. Mus., 14, p. 322, pl. 22, 1888—Oyapoc, Essequibo, Camacusa.

Elaenea aurifrons (not Muscicapa aurifrons WIED) CABANIS in SCHOMBURGK, Reisen Brit. Guiana, 3, p. 701, 1848—British Guiana.

Scotothorus chrysocephalus Hellmayr, Verh. Zool. Bot. Ges., 53, pp. 202, 203, 1903 (char., syn., range); Berlepsch, Nov. Zool., 15, p. 321, 1908 (nomencl.); Hellmayr in Wytsman, Gen. Av., Part 9, p. 27, pl. 1, fig. 3, 1910—"Cayenne," British Guiana, and upper Rio Negro.

Scotothorus igniceps Berlepsch, Nov. Zool., 15, p. 139, 1908—Oyapoc, French Guiana.

¹ Neopelma sulphureiventer (HELLMAYR): Nearly allied to N. aurifrons, and crown patch of the same lemon chrome shade, but somewhat larger, with much stronger feet and bill; upper mandible blackish instead of horn color; under parts much paler and less greenish, being sulphur yellow, tinged with pale grayish olive on throat and chest. Wing 70-74, (female) 66-69; tail 57-61, (female) 54-57; bill 11-12½.

Material examined.—Brazil, Matto Grosso: Villa Bella de Matto Grosso 3. —Bolivia: Todos Santos, Río Chaparé 4, Río San Mateo 1.

² Neopelma chrysocephalum (PELZELN): Nearly related to N. sulphureiventer, but with shorter tail; crown patch much larger and darker, deep cadmium yellow instead of lemon chrome; lateral portions of crown shaded with dark ashy; throat and foreneck paler, more grayish white. Wing (adult males) 67-72; tail 49-54; bill 11-12½.

Material examined.—British Guiana: Camacusa I, Río Rupununi 9, unspecified I.—Venezuela: San Carlos, Río Guainia (the type)I.—Brazil: Rio Içanna [=Rio Isana] I, Marabitanas, Rio Negro I.

Bahia.

Neopelma chrysocephalum BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 73, 1918-Lelydorp, Surinam.

Neopelma chrysocephala Chubb, Birds Brit. Guiana, 2, p. 265, 1921-British Guiana (numerous localities).

Range: French, Dutch, and British Guiana; northern Brazil (Rio Içanna [= Rio Isana] and Marabitanas, upper Rio Negro), and extreme southern Venezuela (San Carlos, Río Guainia).

5: British Guiana (Río Rupununi 4, unspecified 1).

*Neopelma pallescens (Lafresnaye). YELLOW-CRESTED MANAKIN. Tyrannula pallescens LAFRESNAYE, Rev. Mag. Zool., (2), 5, p. 57, 1853-

Heteropelma flavicapillum Sclater, P.Z.S.Lond., 28, p. 466, 1860-southeastern Brazil; Pelzeln, Orn. Bras., 2, p. 125, 1868-Nas Lages and Rio das Pedras (São Paulo), Goyaz, and Engenho do Cap. Gama, Matto Grosso (spec. examined); REINHARDT, Vidensk. Medd. Naturhist. Foren., 1870, p. 321-Lagôa Santa, Minas Geraes; Sclater, Cat. B. Brit. Mus., 14, p. 321, pl. 21, 1888-Bahia and "Rio," Brazil; ALLEN, Bull. Amer. Mus. N.H., 5, p. 109, 1893—Chapada, Matto Grosso.

Heteropelma chrysocephalum (lapsu) Pelzeln, Orn. Bras., 2, p. 125, 1868part, São Vicente, Matto Grosso (spec. examined).

Scotothorus pallescens HELLMAYR, Verh. Zool. Bot. Ges., 53, pp. 202, 203, 204, 1903 (char., crit., range); IHERING, Cat. Faun. Braz., 1, p. 303, 1907 -Bahia (range); HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 27, 1910 (range); REISER, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 76, 1910; p. 166, 1925-Cachoeira, Rio Parnahyba, Maranhão, and São Martin, Piauhy (spec. examined); SNETHLAGE, Bol. Mus. Goeldi, 8, p. 371, 1914—Serra de Paituna [Monte Alegre] and Maranhão (spec. examined).

Neopelma pallescens Hellmayr, Nov. Zool., 15, p. 55, 1908-Goyaz, Rio Thesouras, and Rio Araguaya, Goyaz; idem, Field Mus. Nat. Hist., Zool. Ser., 12, p. 335, 1929—Rosario, Miritiba, and Tranqueira, Maranhão.

Range: Campo region of eastern and central Brazil, from Matto Grosso, northern São Paulo, and Minas Geraes through

¹ Neopelma pallescens (LAFRESNAYE) is readily distinguished among its affines by its large size, pale dingy grayish throat and breast, and very pale yellowish abdomen. The vertical crest is bright lemon chrome, as in N. aurifrons. Wing 77-83, (female) 72-76; tail 64-70, (female) 61-64; bill 12-13.

Two adults from the Rio Tapajóz (Santarém, Itaituba) agree in coloration

and size with specimens from eastern Brazil.

Material examined.—São Paulo: Nas Lages I, Rio das Pedras 2.—Matto Grosso: Engenho do Gama I, São Vicente I.—Goyaz: Goyaz City 7, Rio Thesouras I, Rio Araguaya 2.—Minas Geraes: Rio das Velhas, near Lagôa Santa 6, Agua Suja, near Bagagem I, Rio Jordão, near Araguary I.—Bahia: Santo Amaro 2, unspecified 6.—Piauhy: São Martin, Rio Parnahyba 2.—Maranhão: Cachoeira, Rio Parnahyba I, Tranqueira 3, Miritiba I, Rosario I.—Pará: Serra de Paituna, near Monte Alegre I (Mus. Goeldi, No. 5966. July 22, 1908. E. Snethlage); Santarém I: Itaituba, Rio Tapaióz I. Santarém I; Itaituba, Rio Tapajóz I.

Goyaz and Bahia north to Piauhy and Maranhão, and even to the lower Amazon (Santarém; Itaituba, Rio Tapajóz; Serra de Paituna, near Monte Alegre).¹

13: Brazil, Minas Geraes (Rio das Velhas, near Lagôa Santa 6); Bahia (Santo Amaro 2, unspecified 1); Maranhão (Rosario 1, Tranqueira 3).

Genus HETEROCERCUS Sclater.2

Heterocercus Sclater, Cat. Coll. Amer. Birds, p. 245, 1862—type by monotypy Elaenia linteata Strickland.

Heterocercus linteatus (Strickland).3 FIRE-CROWNED MANAKIN.

Elaenia linteata Strickland, Contrib. Orn., 1850, Illust. Orn., p. 121-15, pl. [63], left fig.—part, descr. of alleged male, "Upper branches of the Amazon River."

Heterocercus linteatus Sclater, Cat. Coll. Amer. Birds, p. 245, 1862—"Upper Amazon"; Pelzeln, Orn. Bras., 2, p. 125, 1868—Borba, Rio Madeira (descr. of female; spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 324, 1888—"Upper Amazons"; Snethlage, Journ. Orn., 55, p. 289, 1907—"Monte Alegre"; Hellmayr, Nov. Zool., 14, p. 362, 1907—Humaythá, Rio Madeira; idem, l.c., 17, p. 312, 1910—Allianca, Rio Madeira, and Maroins, Rio Machados; idem in Wytsman, Gen. Av., Part 9, p. 30, 1910 (range); Snethlage, Journ. Orn., 56, p. 504, 1908—Goyana, Ilha do Papageio, Ilha do Coata, and Villa Braga, Rio Tapajóz; idem, l.c., 61, p. 525, 1913—Islands of the Tapajóz, Santa Julia, Rio Iriri, and Cussary; idem, Bol. Mus. Goeldi, 8, p. 372, 1914—"Monte Alegre" [?=Cussary], Rio Iriri (Santa Julia), Rio Jamauchim (Viração), Rio Tapajóz (Goyana, Villa Braga, Papagaio, Coata).

Heterocercus flavivertex (not of Pelzeln) Riker and Chapman, Auk, 8, p. 25, 1891—Santarém.

Heterocercus lineatus Taczanowski, Orn. Pér., 2, p. 351, 1884—part, descr. only (excl. locality "Nauta"); Stone, Proc. Ac. Nat. Sci. Phila., 1899, p. 47 (type in Coll. Mus. Acad. Nat. Sci. Philadelphia).

Range: Northern Brazil, south of the Amazon, from the Xingú west to the Rio Madeira, possibly even to the Javari, south to northern Matto Grosso (Rio Roosevelt).

¹The locality "Rio de Janeiro," sometimes quoted for this species, is unquestionably erroneous.

²Key to the species; Hellmayr, Nov. Zool., 13, p. 327, 1906.

³ Heterocercus linteatus (STRICKLAND) differs from the other members of the genus by having, in the male sex, the upper part and sides of the head deep black, and the crown patch fiery red instead of yellow or orange. Besides, the upper parts are of a much duller, more brownish olive, which also serves to distinguish the female from the allied species.

Material examined.—Brazil: Goyana, Rio Tapajóz 2; Rio Madeira, Borba

3, Allianca I, Humaythá 4; Maroins, Rio Machados 5.

'The record from "Monte Alegre," north bank of the Amazon, is open to doubt (see Snethlage, Journ. Orn., 61, p. 525, 1913).

Heterocercus flavivertex Pelzeln. YELLOW-CROWNED MANAKIN.

Helerocercus flavivertex PELZELN, Orn. Bras., 2, pp. 125, 186, Sept., 1868-Rio Negro, Marabitanas, Rio Xié, Rio Icanna, Rio Vaupé, and Barcellos, Brazil (spec. examined); SCLATER, Cat. B. Brit. Mus., 14, p. 325, 1888part, spec. a-g, Rio Negro and "Oyapoc, Cayenne"; BERLEPSCH and HARTERT, Nov. Zool., 9, p. 54, 1902-Maipures and Perico, Río Orinoco, Venezuela (spec. examined); BERLEPSCH, l.c., 15, p. 139, 1908—"Oyapoc, Cayenne" (ex Sclater); Hellmayr in Wytsman, Gen. Av., Part 9, p. 30, pl. I, fig. 6, 1910 (range); CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 249, 1916-Maipures and Perico, Río Orinoco.

Elaenia linteata STRICKLAND, Contrib. Orn., 1850, Illust. Orn., p. 121-15, pl. [63], right fig.-part, descr. of alleged female. "Upper branches of the Amazon River."

Heterocercus angosturae BERLEPSCH and LEVERKÜHN, Ornis, 6, p. 19, 1890-"Angostura." Río Orinoco, Venezuela (type in Berlin Museum examined; =female).

Range: Northwestern Brazil, in state of Amazonas (on the Rio Negro, above the junction of the Rio Branco, and its tributaries), and southern Venezuela, on the upper Orinoco (Maipures and Perico).1

Heterocercus aurantiivertex Sclater and Salvin.² Orange-crowned MANAKIN.

Heterocercus aurantiivertex Sclater and Salvin, P.Z.S.Lond., 1880, p. 157-Sarayacu, Ecuador (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 325, pl. 23, 1888-Sarayacu; HELLMAYR in WYTSMAN, Gen. Av., Part 9,

¹Specimens from the upper Orinoco, including the type of H. angosturae, are perfectly similar to Natterer's original series from the Rio Negro.

The locality "Angostura" [=Ciudad Bolívar] is certainly inaccurate, and the occurrence of this species in French Guiana also remains to be confirmed. The five skins in the British Museum, labeled "Oyapoc, Cayenne," were obtained from Madame Verdey, a natural history dealer of Paris, and are quite different in "make" from the ordinary trade skins imported from that colony.

Material examined.—Brazil, Rio Negro: Rio Negro, near the junction of the Rio Branco 2, Marabitanas 5, Barcellos 1; Rio Xié 1; Rio Içanna [=Rio Isana] 1; Rio Vaupé 1.—Venezuela, upper Río Orinoco: Maipures 10, Perico 4, "Angostura" 1.—"Oyapoc, Cayenne" 5.

Heterocercus aurantiivertex SCLATER and SALVIN: Adult male (female unknown) nearly related to, and agreeing with, H. flavivertex in dark gray sides of head as well as in olive green forehead and lateral portions of crown; but vertical patch bright orange instead of yellow, and breast ochraceous tawny like the abdomen, not chestnut. Wing 87; tail 49-50; bill 13.

This form which, in all probability, is but a western race of *H. flavivertex* is known only from three adult males in the British Museum. A young male from Chamicuros, Peru, agrees with them in pale coloration of under parts, but the few bright feathers just appearing in the middle of the crown are golden yellow, more like *H. flavivertex*. The proper identification of the Peruvian form must be left in abeyance until satisfactory material comes to hand.

Material examined.—Ecuador: Sarayacu (types) 3.—Peru: Chamicuros, (&) juv., July 27, 1867. E. Bartlett (all in the British Museum).

92 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

- p. 30, 1910—Sarayacu; Chapman, Bull. Amer. Mus. N.H., **55**, p. 538, 1926—Sarayacu.
- (?) Heterocercus linteatus (not of STRICKLAND) SCLATER and SALVIN, P.Z.S. Lond., 1873, p. 284—Chamicuros, Peru (spec. examined).
- (?) Heterocercus lineatus Taczanowski, Orn. Pér., 2, p. 351, 1884—part, "Nauta" = Chamicuros.
- (?) Heterocercus flavivertex (not of Pelzeln) Sclater, Cat. B. Brit. Mus., 14, p. 325, 1888—part, spec. h, i, Chamicuros, Peru.

Range: Eastern Ecuador (Sarayacu); (?) northern Peru (Chamicuros).

Heterocercus luteocephalus (Lesson). Golden-Crested Manakin.

Muscicapa luteocephala Lesson, Traité d'Orn., p. 392, 1830—locality unknown (type in Paris Museum examined); Pucheran, Arch. Mus. Hist. Nat. Paris, 7, p. 374, 1855—South America (descr., crit.).

Heterocercus luteocephalus Hellmayr, Nov. Zool., 13, p. 326, 1906 (crit.); Berlepsch, l.c., 15, p. 139, 1908—Cayenne?; Hellmayr in Wytsman, Gen. Av., Part 9, p. 30, 1910.

Range: South America (exact locality unknown).

FAMILY COTINGIDAE. CHATTERERS.

Genus PHOENICIRCUS Swainson.2

Phoenicircus Swainson in Richardson, Faun. Bor.-Amer., 2, p. 491, Feb., 1832—type by subs. desig. (Gray, List Gen. Birds, p. 33, 1840) Ampelis carnifex Linnaeus.

Phoenicocercus STRICKLAND, Ann. Mag. Nat. Hist., 7, p. 29, 1841—emendation. Phoenicocercus Cabanis, Arch. Naturg., 13, (1), p. 236, 1847—emendation.

Phaenicocercus Bonaparte, Consp. Av., 1, p. 170, 1850—emendation.

Carnifex Sundevall, Vetenskaps Akad. Handl. for 1835, p. 78, 1836—type by monotypy Ampelis carnifex Linnaeus.

¹ Heterocercus luteocephalus (LESSON): In coloration much like Neopelma pallescens, but lateral portions of pileum, postocular region, hind neck and sides of neck pure ashy gray, instead of mainly light green, and posterior under parts much brighter yellow, more as in Neopelma chrysocephalum. Vertical crest bright yellow.

The type (and only known specimen) of this species appears to be different from any Manakin I am acquainted with. Wings and tail being in full molt, the measurements, as published elsewhere (Nov. Zool., 13, p. 326), cannot be relied upon. The rectrices, though not full-grown, distinctly exhibit the peculiar shape and the same proportions as in other species of *Heterocercus*, with which the bird also agrees in shortness of tarsi and structure of bill. More information about this obscure species is much desired.

²A genus of doubtful affinity, perhaps more nearly related to the *Rupicolidae* or constituting a family by itself.

*Phoenicircus carnifex (Linnaeus). RED CHATTERER.

Lanius carnifex LINNAEUS, Syst. Nat., 10th ed., 1, p. 94, 1758—based on "The Red Bird from Surinam" EDWARDS, Nat. Hist. Birds, 1, p. 39, pl. 39, Surinam.

Nac. Rio de Janeiro, 2, No. 6, p. 52, 1926—Rio Curuá, Xingú; Chapman, Bull. Amer. Mus. N.H., 55, p. 546, 1926—Río Napo, Ecuador.

Pará district (Pará, Murutucú, Providencia, Benevides, etc.) 9; Ipitinga, Rio Acará 4; Obidos 1; Manáos 8; Colonia do Mojuy, Santarém 9; Villa Braga, Rio Tapajóz 2.

1Phoenicircus nigricollis, as a whole, appears to be the western representative of the Guianan Red Chatterer. North of the Amazon, the latter evidently does not range beyond Manáos, while farther up the Rio Negro, above the junction of the Rio Branco, at Carvoeiro, Barcellos, Thomar, etc., we meet with the Blacknecked form which is the only one found along the Rio Madeira and on the banks of the Solimões. However, on the lower Tapajóz both species P. carnifex and P. nigricollis seem to occur. The Carnegie Museum, Pittsburgh, has a perfectly typical female of nigricollis, collected by S. M. Klages at Villa Braga on November 28, 1919 (C. M., No. 75136), while another female secured at the same locality on December 19, 1919 (C. M., No. 75819) and an adult male are undoubtedly referable to P. carnifex. Again, on the right bank of the Tapajóz the same collector obtained no less than nine specimens, including adults of both sexes and an immature male, of P. carnifex at Colonia do Mojuy, Santarém, whereas farther up the river at Miritituba (opposite Itaituba) an adult male and two females of P. nigricollis, apparently inseparable from Upper-Amazonian specimens, were taken. Further researches are required to show whether the western form is of regular occurence in the Tapajóz Valley. In the meantime, it seems advisable to maintain the specific distinctness of the Red Chatterers.

Material examined.—Brazil: Miritituba, Rio Tapajóz 3; Villa Braga, Rio Tapajóz 1; Rio Negro, Carvoeiro 1, Barcellos (the type) 1, below Thomar 1, Cocuy 1; Manacapurú, Rio Solimões 3; Tonantins, Rio Solimões 3; Rio Madeira, Calama 1, Borba 2.—Peru: Chamicuros 3.—Ecuador: Río Copotaza 1, Río Pastasa 1.

- Phoenicocercus carnifex Sclater and Salvin, P.Z.S.Lond., 1867, p. 580—part, Guía, Rio Negro.
- Phoenicocercus nigrigularis Schater and Salvin, P.Z.S.Lond., 1867, p. 978—Pebas, Peru.
- Phoenicircus nigricollis Allen, Bull. Amer. Mus. N.H., 2, p. 74, 1889—Río Napo; Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 639, 1906—note on type; idem, Nov. Zool., 17, p. 316, 1910—Calama, Rio Madeira.

Range: Northern Brazil (east to the junction of the Rio Negro and Rio Branco, south of the Amazon to the Rio Tapajóz), eastern Peru (dept. Loreto), and eastern Ecuador.

1: Amazonia (unspecified 1).

Genus LANIISOMA Swainson.

- Laniisoma Swainson in Richardson, Faun. Bor.-Amer., 2, p. 492, Feb., 1832 (generic characters; the type species "Lanius arcuatus, Mus. Paris" is a nomen nudum here, and was not described until a year later).
- Ptilochloris Swainson, Classif. Birds, 2, p. 250, 1837—type by monotypy "P. lunatus North. Zool., 2, p. 492. Braz. B. pl. 95."

Laniisoma elegans (Thunberg). SHRIKE-LIKE CHATTERER.

- Ampelis elegans Thunberg,² Dissert. Tullberg Nov. Spec. Ampelis, p. 2, 1823
 —Brazil, coll. Freyreiss (types in Upsala Museum examined; descr. of immature male and female).
- Muscicapa squamata WIED, Beitr. Naturg. Bras., 3, (2), p. 814, 1831—south-eastern Brazil (descr. of female).
- Lanius arcuatus (Geoffroy Saint-Hilaire MS.) Lafresnaye, Mag. Zool., 2, cl. 2, pl. 12, 1833—"du Brésil rapportée au Muséum par Lalande" = Rio de Janeiro (descr. of immature male).
- Ptilochloris arcuatus LAFRESNAYE, Rev. Zool., 1, p. 237, 1838 (descr. of immature male).

¹Evidently a new name for *Laniisoma*, "P. lunatus" being an obvious misprint for arcuatus. Plate 95 (of the "Birds of Brazil and Mexico") referred to by Swainson was never issued.

*Through the good offices of Count Nils Gyldenstolpe, I have been enabled to examine the types preserved in the Upsala Museum. The male is a bird in change of plumage, the pileum being still partly covered with the fluffy ochraceous-buff black-tipped feathers of the juvenile dress (referred to by Thunberg as "crista capitis erecta et cervice flava"), traces of which are also to be found on the upper back and rump. The greater upper wing coverts, likewise retained from the juvenile plumage, are dusky, broadly tipped with ochraceous tawny ("alae subfasciatae e maculis brunneis") and apically narrowly edged with blackish. The female, in adult dress with plain greenish wing coverts, does not differ from other examples of the same sex. Thunberg's statement "cauda rotundata, alis paullo longior" is an obvious pen-slip, as may be seen from the appended measurements of the types.

Male: Wing 101; tail 60; bill 16. Female: wing 100; tail 63; bill 17.

Ptilochloris remigialis LAFRESNAYE, Rev. Zool., 1, p. 237, 1838—no locality stated (type now in Mus. Comp. Zool. Cambridge examined; = adult male); idem, l.c., 10, pp. 183, 184, 1847 (crit.).

Ptilochloris squamata Burmeister, Syst. Übers. Th. Bras., 2, p. 435, 1856—Brazil (ex Wied); Pelzeln, Orn. Bras., 2, p. 126, 1868—Ypanemá, São Paulo; Sclater, Cat. B. Brit. Mus., 14, p. 317, 1888—Bahia and "Novo" Friburgo, Brazil; Allen, Bull. Amer. Mus. N.H., 2, p. 240, 1889 (Wied's type no longer in American Museum); Ihering, Rev. Mus. Paul., 3, p. 209, 1899—São Paulo; idem, l.c., 4, p. 156, 1900—Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 302, 1907—Piracicaba, São Sebastião and Itapura, São Paulo.

Ampelis arcuata Descourtilz, Orn. Brés., p. 26, pl. 29, fig. 3, (mas imm.), circa 1855—from the Corcovado, Rio de Janeiro, "to Matto-Grosso" (errore).

Lanisoma squamatum HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 29, pl. 1, fig. 10, 1910—southeastern Brazil.

Range: Wooded region of southeastern Brazil, from southern Bahia to São Paulo.²

Laniisoma buckleyi (Sclater and Salvin).³ Buckley's Shrike-like Chatterer.

Ptilochloris buckleyi Sclater and Salvin, P.Z.S.Lond., 1880, p. 158, pl. 16—Pindo, eastern Ecuador (descr. of female and pullus); Sclater, Cat. B. Brit. Mus., 14, p. 318, 1888—Pindo.

Laniisoma arcuatum (not of LAFRESNAYE) SCLATER, P.Z.S.Lond., 22, p. 114, 1854—Quijos, Ecuador.

Laniisoma buckleyi HELLMAYR in WYTSMAN, Gen. Av., Part 9, p. 29, 1910—eastern Ecuador; Chapman, Bull. Amer. Mus. N.H., 55, p. 538, 1926—eastern Ecuador.

Range: Eastern Ecuador (Pindo; Archidona; Quijos).

¹The localities "Río Napo" and "Bogotá" are doubtless erroneous.

²Birds from various parts of southern Brazil agree well together. Adult males have the pileum coal black, the wings coverts plain olive green, and the fourth primary strongly attenuated on the apical portion of the inner web, while the three outer remiges, though of normal width, are somewhat pointed at the tip. The female, besides lacking the modification of the primaries, differs by reason of the less elongated crown feathers being mainly dull green, apically edged with sooty, and the much more heavily marked under parts. The type of *P. remigialis*, courteously lent by Mr. Outram Bangs, has fewer olive blackish bars underneath, and is slightly smaller (wing 100, against 102-106; tail 63, against 65-69) than four other adult males examined by me.

Material examined.—Bahia 3; Nova Friburgo, Rio 1; Rio 1; Ipanemá, São Paulo 1; "Brazil" (types of A. elegans) 2; unspecified (type of P. remigialis) 1.

³Laniisoma buckleyi (SCLATER and SALVIN) is known from only two females and two nestlings. The female differs from the same sex of *L. elegans* by its more greenish crown, the blackish tips being barely suggested by slight dusky edges and deeper yellow under parts, with coarser as well as more numerous blackish markings. Until the male is discovered, the proper status of this form cannot be ascertained.—Wing (female) 98; tail 62; bill 17.

Material examined.—Ecuador: Pindo (including the type) 3; Archidona

(U.S. National Museum, No. 55346. W. Orton) 1.

Genus PHIBALURA Vieillot.

- Phibalura VIEILLOT, Analyse Nouv. Orn. Élém., p. 31, 1816—type by monotypy Phibalura flavirostris VIEILLOT.

Heliochera rufaxilla rufaxilla CHAPMAN, Amer. Mus. Novit., 138, p. 8, 1924—Chaupe, northeast of Huancabamba, Peru.

Range: Subtropical Zone of Peru, from dept. of Cajamarca (Chaupe, near Huancabamba; Tabaconas; Tambillo; Tamiapampa) south to Junín (Vitoc Valley).

Heliochera rufaxilla antioquiae Chapman.2 Antioquia Chatterer.

Heliochera rufaxilla antioquiae Chapman, Amer. Mus. Novit., 138, p. 8, 1924—Santa Elena, Antioquia, Colombia.

Heliochaera rufaxilla (not of TSCHUDI) SCLATER and SALVIN, P.Z.S.Lond., 1879, p. 520—Santa Elena and "Bogotá."²

Heliochera rufaxilla Sclater, Cat. B. Brit. Mus., 14, p. 391, 1888—part, Santa Elena, Retiro, Medellín, and Antioquia, Colombia; Chapman, Bull. Amer. Mus. N.H., 36, p. 500, 1917—San Antonio, Cerro Munchique, and Santa Elena, Colombia.

Range: Subtropical Zone of the Western and Central Andes of Colombia.

Genus DOLIORNIS Taczanowski.

Doliornis Taczanowski, P.Z.S.Lond., 1874, p. 135—type by monotypy Doliornis sclateri Taczanowski.

Doliornis sclateri Taczanowski. Schatter's Chatterer.

Doliornis sclateri Taczanowski, P.Z.S.Lond., 1874, p. 136, pl. 20—Maraynioc, Peru; idem, l.c., p. 541—Maraynioc; idem, Orn. Pér., 2, p. 384, 1884—Maraynioc; Sclater, Cat. B. Brit. Mus., 14, p. 390, 1888—Maraynioc.

Range: Temperate Zone of central Peru (Maraynioc, dept. Junín).⁴

¹Material examined.—Peru: Tamiapampa I, Garita del Sol, Vitoc I.

² Heliochera rufaxilla antioquiae Chapman: Very similar to H. r. rufaxilla, but larger and more heavily streaked underneath. Wing 122-124, (female) 120; tail 82-84, (female) 78; bill 18-19.

Material examined.—Colombia: Santa Elena 2, Retiro 1.

³The specimen which I have examined in the Paris Museum is by no means from "Bogotá." It was in a small collection sent by M. Triana containing among other things the type of *Capito quinticolor* and, though no locality is specified on the label, it doubtless came from the Western Cordillera.

'Material examined.—Peru: Maraynioc (including the type) 2.

Genus TIJUCA Férussac.

Tijuca FÉRUSSAC, Bull. Sci. Nat., 19, for Nov.-Dec., p. 324, 1829—type by monotypy Tijuca atra "Lesson"; Lesson, Cent. Zool., livr. 1, p. 30, March, 1830—type by monotypy Tijuca nigra Lesson.

Chrysopteryx Swainson in Richardson, Faun. Bor.-Amer., 2, p. 492, Feb., 1832—type by orig. desig. Chrysopteryx erythrorhynchus Swainson = Tijuca atra Férussac.

*Tijuca atra Férussac. Tijuca.

Tijuca atra (Lesson MS.) Férussac, Bull. Sci. Nat., 19, for Nov.-Dec., p. 324, 1829—"intérieur du Brésil."

Tijuca nigra Lesson, Cent. Zool., livr. 1, p. 31, pl. 6 (male), March, 1830—"intérieur du Brésil"; Pelzeln, Orn. Bras., 2, p. 132, 1868—"Bahia"; Sclater, Cat. B. Brit. Mus., 14, p. 373, 1888—"Novo" Friburgo, Brazil; Ihering, Rev. Mus. Paul., 4, p. 156, 1900—Nova Friburgo; idem, Cat. Faun. Braz., 1, p. 313, 1907—"Santa Catharina to Rio de Janeiro and Bahia"; Holt, Bull. Amer. Mus. N. H., 57, p. 310, 1928—Serra do Itatiaya (song).

Chrysopteryx erythrorhynchus SWAINSON in RICHARDSON, Faun. Bor.-Amer., 2, p. 492, Feb., 1832—interior of Brazil (descr. of male and female).

Ampelis chrysoptera Nordmann in Erman's Reise, Naturhist. Atlas, p. 15, pl. 10, fig. 1, 1835—Brazil (descr. of adult and immature male); Descourtilz, Orn. Brés., p. 25, pl. 28, fig. 1, circa 1855—"les serras de l'intérieur du Brésil" (habits).

Ptilochloris chrysoptera Burmeister, Syst. Übers. Th. Bras., 2, p. 435, 1856—"der mehr den südlichen Gegenden (St. Paulo, St. Catharina) angehört" (errore).

Range: Mountain ranges of southeastern Brazil, in state of Rio de Janeiro (Nova Friburgo; Petropolis; Therezopolis; Colonia Alpina, Serra dos Orgãos; Serra do Itatiaya) and adjacent section of Minas Geraes (São Francisco).¹

1: Brazil (Therezopolis 1).

Genus AMPELION Cabanis.

Ampelion Cabanis in Tschudi, Faun. Peru., Aves, p. 137, 1846—type by subs. desig. (Gray, Cat. Gen. and Subgen. Birds, p. 56, 1855)² "Ampelis" [= Procnias] cucullata Swainson.

¹No reliable record exists for any locality outside the area circumscribed above.

Material examined.—Rio de Janeiro: Macieiras, Serra do Itatiaya I (U.S. Nat. Museum); Colonia Alpina, Serra dos Orgãos 15 (E. A. Goeldi coll., Zoological Museum, Berne, Switzerland); Petropolis I (adult male, May 3, 1886. J. Young. Tring Museum); Therezopolis I; "Rio" trade skins 3.—Minas Geraes: São Francisco, alt. 1580 meters, I (adult male, March 30, 1901. A. Robert. Tring Museum).

²In the Appendix of the same work (p. 147) Gray selected Ampelis rubrocristata LAFRESNAYE and D'ORBIGNY, the other species originally included in the

- Carpornis Gray (and MITCHELL), Genera Birds, 1, p. 279, Dec., 1846—type by subs. desig. (Gray, Cat. Gen. and Subgen. Birds, p. 147, 1855) "Ampelis" [= Procnias] melanocephala SWAINSON.
- Ampelio Cabanis and Heine, Mus. Hein., 2, p. 104, 1859—emendation for Ampelion Cabanis.

*Ampelion cucullatus (Swainson). Hooded Berry-eater.

- Procnias cucullata Swainson, Zool. Illust., 1, pl. 37, April, 1821—Brazil (descr. of adult male).
- Ampelis cucullata TEMMINCK, Nouv. Rec. Pl. Col., livr. 61, pl. 363 (=adult male), 1825—Brazil; Descourtilz, Orn. Brés., p. 26, pl. 29, fig. 2, circa 1855—Brazil (habits).

Paul., 3, p. 216, 1899—Iguapé and Ypiranga, São Paulo; idem, l.c., 4, p. 156, 1900—Nova Friburgo; idem, Cat. Faun. Braz., 1, p. 313, 1907—Santo Amaro, Ubatuba, Alto da Serra, and Iguapé, São Paulo; Hellmayr, Verh. Orn. Ges. Bay., 12, p. 139, 1915—Braço do Sul, near Victoria, Espirito Santo (descr. of female).
- Ampelio cucullatus Pelzeln, Orn. Bras., 2, p. 132, 1868—Campo Largo and Rio Grande, near São Paulo (descr. of female); Hamilton, Ibis, 1871, p. 306—Serra do Mar, São Paulo; Berlepsch, Journ. Orn., 21, p. 266, 1873—Blumenau, Santa Catharina; Berlepsch and Ihering, Zeits. Ges. Orn., 2, p. 140, 1885—Taquara do Mundo Novo and Arroio Grande, Rio Grande do Sul.

Range: Wooded region of southeastern Brazil, from Espirito Santo south to Rio Grande do Sul.¹

1: Brazil (Rio 1).

Ampelion melanocephalus (Wied). BLACK-HEADED BERRY-EATER.

Procnias melanocephalus WIED, Reise Bras., 1, p. 168 (8vo ed., p. 166), 1820—Quartel das Barreiras, road from the Rio Itapémirim to the Rio Itapapuana, southern Espirito Santo; Swainson, Zool. Illust., 1, pl. 25, Feb., 1821—forests of Pitanga, Bahia (descr. of male).

Turdus melanocephalus VIEILLOT, Tabl. Enc. Meth., Orn., 2, p. 647, 1822— "Brésil," coll. Delalande; Pucheran, Arch. Mus. Hist. Nat., 7, livr. 3, p. 351, 1855 (crit.).

genus Ampelion, but under the rules there is no justification in reversing his earlier action.

¹Material examined.—Braço do Sul, Espirito Santo 1; Nova Friburgo, Rio 2; Campo Largo, São Paulo 1; Rio Grande, near São Paulo City 2; Santa Catharina (Aguas Pretas, Serra do Mirador, Laguna, Blumenau) 6; Taquara do Mundo Novo, Rio Grande do Sul 7.

Ampelis viridis Thunberg, Dissert. Tullberg Ampelis Nov. Spec., p. 4, 1823—Brazil, coll. Freyreiss.

Ampelis melanocephala WIED, Beitr. Naturg. Bras., 3, (1), p. 401, 1830—Das Barreiras, Espirito Santo.

Ampelio(n) melanocephalus Burmeister, Syst. Übers. Th. Bras., 2, p. 432, 1856—Nova Friburgo, Rio; Pelzeln, Orn. Bras., 2, p. 132, 1868—Bahia; Sclater, Cat. B. Brit. Mus., 14, p. 374, 1888—Brazil; Allen, Bull. Amer. Mus. N.H., 2, p. 241, 1889—note on Wied's type; Ihering, Rev. Mus. Paul., 3, p. 216, 1899—Iguapé, São Paulo; idem, l.c., 4, p. 156, 1900—Nova Friburgo, Rio; idem, l.c., p. 240, 1900—São Paulo (egg descr.); idem, Cat. Faun. Braz., 1, p. 313, 1907—Alto da Serra and Iguapé, São Paulo, and Rio Doce, Espirito Santo; Lima, Rev. Mus Paul., 12, (2), p. 100, 1920—southern Bahia.

Range: Wooded region of southeastern Brazil, from southern Bahia to São Paulo.²

Genus PORPHYROLAEMA³ Bonaparte.

Porphyrolaema Bonaparte, Ateneo Italiano, 2, No. 11, p. 315 (=Consp. Voluc. Anisod., p. 5), 1854—type by monotypy Colinga porphyrolaema Deville and Sclater.

Porphyrolaema porphyrolaema (Deville and Sclater). Purplethroated Cotinga.

Cotinga porphyrolaema Deville and Sclater, Rev. Mag. Zool., (2), 4, p. 226, 1852—Sarayacu, Río Ucayali, Peru (type in Paris Museum examined); Sclater, Contrib. Orn., 1852, p. 136, pl. 96—Sarayacu; Sclater and Salvin, P.Z.S.Lond., 1866, p. 191—Sarayacu; idem, l.c., 1873, p. 285—Sarayacu, Ucayali; idem, l.c., 1880, p. 155—Sarayacu, Ecuador; Taczanowski, Orn. Pér., 2, p. 386, 1884—Sarayacu, Ucayali; Sclater, Cat. B. Brit. Mus., 14, p. 386, 1888—River Ucayali and Samiria, Peru, and Sarayacu, Ecuador; Snethlage, Bol. Mus. Goeldi, 8, p. 357, 1914 (range); Chapman, Bull. Amer. Mus. N.H., 55, p. 551, 1926—eastern Ecuador.

Porphyrolaema phygas Bonaparte, Ateneo Italiano, 2, No. 11, p. 315 (= Consp. Voluc. Anisod., p. 5), 1854—new name for Cotinga porphyrolaema Deville and Sclater.

Cotinga (Ampelis) porphyrolaema DES MURS in CASTELNAU, Expéd. Amér. Sud, Ois., p. 65, 1856—Sarayacu, Peru.

Range: Eastern Ecuador, northeastern Peru (lower Marañón and Ucayali River), and western Brazil (Rio Purús).4

¹Except for the obvious lapsus "cauda alis multo longior," Thunberg's description corresponds to the characters of A. melanocephalus. I am informed by Count Gyldenstolpe that the types are no longer to be found in the Upsala Museum.

²Material examined.—Bahia 3; "Rio de Janeiro" 1; Iguapé, São Paulo 1.

³Porphyrolaema is easily separable from Cotinga by its much larger (more swollen as well as basally wider) bill and nearly square (not emarginate) tail.

⁴Material examined.—Ecuador: Sarayacu 2.—Peru: Sarayacu (including the type) 2, Samiria 1.—Brazil: Arimā, Rio Purús 14.

Genus COTINGA Brisson.

- Cotinga Brisson, Ornith., 2, p. 339, 1760—type by tautonomy "Cotinga" Brisson = Ampelis cotinga Linnaeus.
- Ampelis Linnaeus, Syst. Nat., 12th ed., 1, p. 297, 1766—type by subs. desig. (Gray, List Gen. Birds, p. 34, 1840) Ampelis cotinga Linnaeus.
- Hylocosmia Sundevall, Meth. Nat. Av. Disp. Tent., p. 62, 1872—new name for Cotinga Brisson.

*Cotinga cotinga (Linnaeus). PURPLE-BREASTED COTINGA.

- Ampelis cotinga Linnaeus, Syst. Nat., 12th ed., 1, p. 298, 1766—based on "Le Cotinga" Brisson (Orn., 2, p. 340, pl. 34, fig. 1, 1760), "Brésil"; Descourtilz, Orn. Brés., p. 25, pl. 28, fig. 3, circa 1856—range imaginary; Cabanis and Heine, Mus. Hein., 2, p. 105, 1859—Guiana; Bates, Naturalist on the Amazons, 1, p. 119, 1863—Vista Alegre, above Cametá, Rio Tocantins.
- Ampelis caerulea Vieillot, Tabl. Enc. Méth., Orn., 2, livr. 91, p. 760, 1822—based on "Le Cotinga" Brisson and "Cotinga du Brésil" Buffon, Brazil and Cayenne; idem (and Oudart), Galerie Ois., 1, (2), p. 183, pl. 116, 1823—Cayenne and Surinam; Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 693, 1848—Demerara.
- Cotinga coelestis Gray, List Gen. Birds, 2nd ed., p. 46, 1841—new name for Ampelis cotinga Linnaeus (excl. ref. Daubenton, Pl. Enl. 188).
- Cotinga caerulea Bonaparte, Bull. Soc. Linn. Normandie, 2, p. 36, 1857—Cayenne; Sclater and Salvin, P.Z.S.Lond., 1867, p. 580—near Pará; Pelzeln, Orn. Bras., 2, p. 132, 1868—Cachoeira do Rio Xié, Rio Vaupé, Rio Negro, Barra do Rio Negro [=Manáos], Pará; Salvin, Ibis, 1885, p. 304—Bartica Grove and Atapurow River, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 382, 1888—Cayenne, Bartica Grove, Atapurow River, Carimang River; Riker and Chapman, Auk, 8, p. 25, 1891—Santarém; Snethlage, Journ. Orn., 55, p. 291, 1907—Pará; Penard and Penard, Vog. Guyana, 2, p. 158, 1910—Surinam.
- Cotinga cotinga IHERING and IHERING, Cat. Faun. Braz., 1, p. 313, 1907—range; Berlepsch, Nov. Zool., 15, p. 142, 1908—Cayenne; Hellmayr, Abhandl. Math.-phys. Kl. Bayr. Ak. Wiss., 26, No. 2, p. 91, 1912—Pará; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 356, 1914—Pará and Providencia Pará district; Chubb, Birds Brit. Guiana, 2, p. 299, 1921—numerous localities.

Range: French, Dutch, and British Guiana, and northern Brazil (Rio Negro, from Manáos up to the Vaupé and Xié rivers; Pará and vicinity; Santarém, Rio Tapajóz).

3: British Guiana (Mazaruni River 2; unspecified 1).

*Cotinga maculata (Müller).1 BANDED COTINGA.

¹Cotinga maculata (MÜLLER) is probably conspecific with, and appears to replace, C. cotinga in eastern Brazil. Its range, however, is very imperfectly known, and unacquainted with the female as I am, I provisionally accord it full specific rank.

Material examined.—Brazil: Bahia 4, "Rio de Janeiro" 2.

- Ampelis maculatus P. L. S. MÜLLER, Natursyst., Suppl., p. 147, 1776—based on "Buffon" [= Daubenton, Pl. Enl. 188] and Edwards [= Glean. Nat. Hist., 3, pl. 340], Brazil; we suggest Rio de Janeiro.
- Ampelis superba Shaw (and Nodder), Natur. Misc., 19, No. 11, pl. 821, July, 1808—based on "Le Cotinga Cordon Bleu" Levaillant (Hist. Nat. Ois. Nouv. et Rar. Amérique et Indes, 1, pl. 42) and Edwards (Glean. Nat. Hist., 3, pl. 340), Brazil.
- Ampelis cincta Kuhl, Buffoni et Daubentoni Fig. Av. Nom. Syst., p. 4, 1820—based on "Cotinga du Brésil" Daubenton, Pl. Enl. 188, Brazil; STRICKLAND, Ann. Mag. Nat. Hist., 8, p. 373, 1842 (crit.); Burmeister, Syst. Übers. Th. Bras., 2, p. 430, 1856—Nova Friburgo, Rio.
- Ampelis cotinga (not of LINNAEUS) WIED, Reise Brasil., 1, p. 275 (8vo ed., p. 272), 1820—Viçoza, north of Rio Mucuri, southern Bahia; VIEILLOT, Tabl. Enc. Méth., Orn., 2, livr. 91, p. 761, 1822—Brazil; WIED, Beitr. Naturg. Bras., 3, (1), p. 391, 1830—Rio St. Matthaeus (Espirito Santo), Mucuri, Rio das Contas, and Rio Jiquiriçá (Bahia), Brazil.
- Ampelis fasciata (not of Thunberg, 1823) Descourtilz, Orn. Brés., p. 26, pl. 29, fig. 1, circa 1856—"aux confins de la province de Rio Janeiro près Campos dos Goÿtacazes Morro do Frade; Bahia et Pará." ("Pará" errore).
- Cotinga caerulea (not Ampelis caerulea VIEILLOT) BONAPARTE, Consp. Av., 1, p. 175, 1850—Brazil.
- Cotinga cincta Sclater, Cat. B. Brit. Mus., 14, p. 383, 1888—Bahia, Brazil; IHERING, Rev. Mus. Paul., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 314, 1907—Rio Doce, Espirito Santo.

Range: Wooded coast-region of southeastern Brazil, from Rio de Janeiro north to southern Bahia.

1: Brazil (Bahia 1).

*Cotinga amabilis Gould.1 LOVELY COTINGA.

Cotinga amabilis Gould, P.Z.S.Lond., 25, p. 64, pl. 123, July, 1857—Guatemala; Sclater and Salvin, Ibis, 1859, p. 125—Vera Paz, Guatemala; Salvin, l.c., 1860, p. 193—Cobán, Guatemala; Sclater, P.Z.S.Lond., 28, p. 252, 1860—Orizaba, Vera Cruz, Mexico; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 9, p. 117, 1868—"San José," Costa Rica; Frantzius, Journ. Orn., 17, p. 310, 1869—Orosi, Costa Rica; Zeledón, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—Naranjo de Cartago and Birris, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 384, 1888—Vera Paz, Choctum, and Cobán (Guatemala), and Costa Rica; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 138, 1891—part, Orizaba and Chimalapa, Tehuantepec (Mexico), Guatemala, and Costa Rica; Bangs, Bull. Mus. Comp. Zool., 39, p. 149, 1903—Ceiba, Honduras; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 781, 1907—southeastern Mexico through Guatemala and Hon-

¹Cotinga amabilis and the two next species are nearly related to, and probably conspecific with, C. maynana, of Upper Amazonia.

duras south to eastern Costa Rica (monog.); Dearborn, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 100, 1907—Los Amates, Guatemala; Carriker, Ann. Carnegie Mus., 6, p. 676, 1910—Carrillo, Tuis, and Cachi, Costa Rica.

Ampelis amabilis Cabanis, Journ. Orn., 9, p. 253, 1861—Costa Rica.

Range: Southeastern Mexico, in states of Vera Cruz (Orizaba, Mirador, Pasa Nueva) and Oaxaca (Chimalapa) and southward through Guatemala and Honduras to eastern Costa Rica.¹

5: Guatemala (Los Amates, Izabal 3; Gualan, Zacapa 2).

*Cotinga ridgwayi Ridgway. RIDGWAY'S COTINGA.

Cotinga ridgwayi (Zeledón MS.) Ridgway, Proc. U.S.Nat. Mus., 10, p. 1, pl. 6, fig. 3, 1887—part, type from Pozo Azul, Costa Rica, only; Zeledón, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—Pozo Azul de Pirris; Sclater, Cat. B. Brit. Mus., 14, p. 384, 1888—part, spec. a,b, Bugaba, Chiriquí; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 139, 1891—part, Pozo Azul, Costa Rica, and Bugaba, western Panama; Cherrie, Expl. Zool. en Costa Rica, 1891-92, p. 37, 1893—Lagarto; Bangs, Proc. New Engl. Zool. Cl., 3, p. 41, 1902—Bogaba, Chiriquí; Ridgway, Bull. U.S. Nat. Mus., 50, Part 4, p. 783, 1907—southwestern Costa Rica and western Panama; Carriker, Ann. Carnegie Mus., 6, p. 675, 1910—Pozo Azul de Pirris, Costa Rica.

Cotinga amabilis (not of Gould) Salvin, P.Z.S.Lond., 1870, p. 200—Bugaba, Panama.

Range: Southwestern Costa Rica (Pozo Azul de Pirris, Pigres, Lagarto) and western Panama (Bugaba and Boquete, Chiriquí).²

2: Panama (Boquete, Chiriquí 2).

Cotinga nattererii (Boissonneau).3 NATTERER'S COTINGA.

Ampelis nattererii Boissonneau, Rev. Zool., 3, p. 2, 1840—Santa Fé de Bogotá, Colombia (descr. of adult male).

¹Material examined.—Guatemala: Los Amates 3, Gualan 2, Vera Paz 2.— Honduras: San Pedro I, Los Caminos I.

²Birds from Boquete agree with topotypes from Pozo Azul, Costa Rica. Two specimens—adult male and female—in the U.S. National Museum, said to be from "Isthmus of Panama, May, 1887, W. E. Safford," likewise belong to the present species, but the locality is open to doubt.

³Cotinga nattererii (Boissonneau): Adult male nearest to *C. ridgwayi*, but second primary decidedly longer (almost equaling the third) and apically not attenuated; purple of throat and pectoral area darker and narrowly barred with blackish; blue pectoral band much wider; female more deeply buff underneath, especially anteriorly. Wing (adult male) 107-111, (female) 106-110; tail 66-69, (female) 71-75; bill 14½-15.

A single adult male from Panama (Chorera) is identical with a series from the Pacific coast of Colombia. The only Bogotá skin seen by me (U.S. National Museum, No. 78,108) differs by the lighter purple of the abdominal area, resembling in that respect the Costa Rican ridgwayi. In all other particulars, however,

Cotinga simoni Berlepsch, Ornis, 14, p. 361, Feb., 1907—San José, Río Dagua, Colombia (type in Berlepsch Collection examined).

Cotinga nattereri (i) Sclater, P.Z.S.Lond., 23, p. 152, 1855—Bogotá; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 140, footnote, 1891 (crit.); Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 785, 1907—eastern Panama (line of Panama Railway) to Bogotá, Colombia (monog.); Hellmayr, P.Z.S.Lond., 1911, p. 1146—Nóvita, Chocó, Colombia (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 499, 1917—Iguamiandó, Noanamá, and Barbacoas, Pacific coast, and Puerto Valdivia, lower Cauca, Colombia, and Esmeraldas, Ecuador; Hallinan, Auk, 41, p. 319, 1924—Sosa Hill, Panama; Chapman, Bull. Amer. Mus. N.H., 55, p. 551, 1926—Esmeraldas, Ecuador; idem, l.c., 58, p. 163, 1920—Barro Colorado Island, Panama (nesting habits); Griscom, Bull. Mus. Comp. Zool., 69, p. 181, 1929—El Tigre, Rio Cupe, Darién.

Cotinga amabilis (not of GOULD) LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 7, p. 473, 1862—line of Panama Railway.

Cotinga ridgwayi (not of RIDGWAY) RIDGWAY, Proc. U.S.Nat. Mus., 10, p. 1, 1887—part, Bogotá; Sclater, Cat. B. Brit. Mus., 14, p. 384, 1888—part, spec. c, "Central America (probably Panama)"; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 139, 1891—part, Panama Railroad and Bogotá.

Cotinga natteri (sic) Bangs and Barbour, Bull. Mus. Comp. Zool., 65, p. 212, 1922—Mount Sapo, Darién (habits).

Range: Tropical Zone of eastern Panama (Panama Railroad; Darién), Colombia (Pacific coast, east to the lower Magdalena Valley; occasionally in "Bogotá" collections), and northwestern Ecuador (Esmeraldas).

*Cotinga maynana (Linnaeus). MAYNAS COTINGA.

Ampelis maynana LINNAEUS, Syst. Nat., 12th ed., 1, p. 298, 1766—based on "Le Cotinga des Maynas" Brisson, Orn., 2, p. 341, pl. 34, fig. 2, 1760, Maynas, Peru; coll. Godin, in Mus. Réaumur.

Cotinga maynana Sclater, P.Z.S.Lond., 25, p. 265, 1857—Rio Javarri; idem, l.c., 26, p. 71, 1858—Río Napo, Ecuador; Pelzeln, Orn. Bras., 2, p. 133, 1868—Rio Joanari, right bank of Rio Negro, and Tabatinga, Rio Solimões, Brazil; Sclater and Salvin, P.Z.S.Lond., 1873, p. 285—Chamicuros and Santa Cruz, Peru; Taczanowski, l.c., 1882, p. 24—Yurimaguas; idem, Orn. Pér., 2, p. 385, 1884—Peruvian localities; Sclater, Cat. B. Brit. Mus., 14, p. 386, 1888—Iquitos, Río Ucayali, Chamicuros, Pebas (Peru),

it agrees with males from western Colombia, notably in the shape of the second primary, the width of the blue pectoral band, and the presence of greenish-black bars on throat and abdominal area. From the numerous buffy edges and lateral spots on the throat feathers I infer that the bird is not quite adult. Nevertheless the examination of a good series from "Bogotá" seems desirable.

Material examined.—Panama: Chorera 1.—Colombia: Bogotá 1; Nóvita, Chocó 18; Iguamiandó, Chocó 1; San José, Río Dagua 1; El Paillon, near Buenaventura 2.

Sarayacu and Napo (Ecuador); Allen, Bull. Amer. Mus. N.H., 2, p. 74, 1889—Río Napo; Goodfellow, Ibis, 1901, p. 714—Upper Napo, Ecuador; Ihering and Ihering, Cat. Faun. Braz., 1, p. 314, 1907— range; Hellmayr, Nov. Zool., 14, p. 51, 1907—Teffé, Rio Solimões; Ménégaux, Miss. Serv. Géogr. Armée Mes. Arc Mérid. Equat., 9, p. B 64, 1911—eastern Ecuador; Snethlage, Journ. Orn., 56, p. 13, 1908—Bom Lugar, Rio Purús; idem, Bol. Mus. Goeldi, 8, p. 356, 1914—Bom Lugar, Rio Purús; Berlioz, Bull. Mus. Hist. Nat. Paris, 31, p. 233, 1925—Sarayacu, Ecuador; Chapman, Bull. Amer. Mus. N.H., 55, p. 551, 1926—Río Napo and below San José de Sumaco, Ecuador.

Range: Upper Amazonia, from eastern Ecuador south to eastern Peru and east to northwestern Brazil (Teffé and Tabatinga, Rio Solimões; Rio Joanari, an affluent on the right side of the Rio Negro; Rio Purús).¹

1: Peru (Yurimaguas 1).

*Cotinga cayana (Linnaeus). CAYENNE COTINGA.

Ampelis cayana Linnaeus, Syst. Nat., 12th ed., 1, p. 298, 1766—based on "Le Cotinga de Cayenne," Brisson, Orn., 2, p. 344, pl. 34, fig. 3, 1760: "Brésil et Cayenne, d'où il a été envoyé à M. de Réaumur par M. des Essars," type locality therefore Cayenne; Lafresnaye and d'Orbigny, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 40, 1837—Yuracares, Bolivia; Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 693, 1848—Demerara; Descourtilz, Orn. Brés., p. 25, pl. 28, fig. 4, circa 1856—"Maranhão" et Pará.

Ampelis cayennensis d'Orbigny, Voyage Amér. Mérid., Ois., p. 297, 1839—Yuracares, Bolivia (descr. of male).

Ampelis cajana Burmeister, Syst. Übers. Th. Bras., 2, p. 429, 1856—northern Brazil.

Cotinga cayana Sclater and Salvin, P.Z.S.Lond., 1866, p. 191—Peru; idem, l.c., 1867, p. 580—Rio Negro; idem, l.c., p. 751—Xeberos, Peru; idem, l.c., p. 978—Pebas; Pelzeln, Orn. Bras., 2, p. 133, 1868—Borba (Rio Madeira), Rio Xié, Rio Vaupé, Cachoeira São Jeronimo, Rio Negro, Manáos, Pará; Sclater and Salvin, P.Z.S.Lond., 1873, p. 285—Sarayacu, Xeberos, Chamicuros, Santa Cruz, and Pebas, Peru; idem, l.c., 1879, p. 618—Yuracares, Bolivia; Taczanowski, Orn. Pér., 2, p. 384, 1884—Peruvian localities; Salvin, Ibis, 1885, p. 305—Bartica Grove, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 385, 1888—Bartica Grove, Cayenne, Chyavetas, Sarayacu, Río Napo; Allen, Bull Amer. Mus. N.H., 2, p. 88, 1889—lower Beni, Bolivia; Riker and Chapman, Auk, 8, p. 25, 1891—Santarém, Rio Tapajóz; Ihering, Rev. Mus. Paul., 6, p. 435, 1905—Rio Juruá; idem, Cat. Faun. Braz., 1, p. 314, 1907—Rio Juruá; Snethlage, Journ. Orn., 55, p. 291, 1907—Santo Antonio do Prata and Pará; Berlepsch, Nov. Zool., 15, p. 142, 1908—Cayenne;

¹Material examined.—Ecuador: Upper Río Napo 2, Sarayacu 1.—Brazil: Teffé, Rio Solimões 1; Tabatinga 1; Rio Joanari, Rio Negro 4.—Peru: Pebas 3, Iquitos 1, Yurimaguas 1.

HELLMAYR, l.c., 17, p. 316, 1910—Calama, Rio Madeira; Penard and Penard, Vog. Guyana, 2, p. 169, 1910—Surinam; Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 35, 91, 1912—Ipitinga and Peixe-Boi (Pará localities); Snethlage, Bol. Mus. Goeldi, 8, p. 356, 1914—Pará, Mocajatuba, Providencia, Benevides, Santo Antonio do Prata, Rio Acará, Rio Tocantins (Mazagão), Rio Tapajóz (Boim), Rio Negro; Beebe, Zoologica (N.Y.), 2, p. 95, 1916—Utinga, Pará; Chubb, Birds Brit. Guiana, 2, p. 300, 1921—numerous localities; Hellmayr, Nov. Zool., 32, p. 13, 1925—Bolivia; Chapman, Bull. Amer. Mus. N.H., 55, p. 551, 1926—eastern Ecuador; Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928—Rio Inhangapy, Pará.

Cotinga cayenna C. B. Brown, Canoe and Camp Life in British Guiana, p. 395, 1876—near Waipah, Upper Ireng River.

Cotinga nattereri (not of Boissonneau) Sclater, Cat. B. Brit. Mus., 14, p. 385, 1888—Bogotá.

Dacnis (lapsu) cayana Berlioz, Bull. Mus. Hist. Nat. Paris, 31, p. 233, 1925
—Sarayacu, Ecuador (spec. examined).

Range: French, Dutch, and British Guiana; northern Brazil, east to Pará, south to the upper Rio Madeira; eastern Colombia (not uncommon in native "Bogotá" collections); eastern Ecuador; eastern Peru; northern Bolivia (Yuracares; lower Beni).¹

3: British Guiana (Corentyne River 1, Demerara River 1); Peru (Rioja 1).

Genus XIPHOLENA Gloger.²

Xipholena Gloger, Gemeinnütz. Hand- und Hilfsbuch Naturg., 1, p.320, 1841—generic characters, no species mentioned; type by subs. desig. (Gray, Cat. Gen. Subgen. Birds, p. 56, 1855) Ampelis pompadora LINNAEUS = Turdus puniceus Pallas.

*Xipholena punicea (Pallas). Pompadour Chatterer.

Turdus puniceus PALLAS in Vroeg's Catalogue, Adumbrat., p. 2, 1764—"Zuyd America," we suggest Surinam.

Ampelis pompadora Linnaeus, Syst. Nat., 12th ed., 1, p. 298, 1766—based on Turdus puniceus Pallas (l.c.), "Cotinga purpurea" Brisson (Orn., 2, p. 347, pl. 35, fig. 1, 1760—Cayenne) and "Pompadour" Edwards (Glean. Nat. Hist., 3, p. 275, pl. 341—Cayenne); Hahn, Vögel aus Asien, etc., Lief. 9, pl. 3, 1821—Cayenne, Guiana; Schomburgk, Reisen Brit. Guiana, 2, p. 90, 1848—upper Takutú River; Descourtilz, Orn. Brés., p. 25, pl. 28, fig. 2, circa 1856—"Maranhão et Pará" (errore).

¹Material examined.—Cayenne 3.—British Guiana 7.—Brazil: Ipitinga, Rio Acará 14; Peixe-Boi 1; Pará 1; Rio Negro 4; Calama, Rio Madeira 1.—Colombia: "Bogotá" 7.—Ecuador: Sarayacu 2.—Peru: Iquitos 2, Rioja 1.

²The three species of the genus, while obviously geographical representatives, differ so much in structure and proportions that I hesitate to treat any of them as subspecies.

- (?) Ampelis grisea Boddaert, Tabl. Pl. Enl., p. 43, 1783—based on "Cotinga gris de Cayenne" Daubenton, Pl. Enl. 699, Cayenne.
- (?) Ampelis cinerea LATHAM, Ind. Orn., 1, p. 367, 1790—based on Lanius nengeta var. β, GMELIN, Syst. Nat., 1, (1), p. 299, 1788: ex "Cotinga gris de Cayenne" DAUBENTON, Pl. Enl. 699, and "Variété du Guirarou" BUFFON, Cayenne.
- Xipholena pompadora Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 693, 1848—British Guiana; Bonaparte, Bull. Soc. Linn. Normandie, 2, p. 36, 1857—Cayenne; Sclater and Salvin, Exotic Orn., p. 9, 1866—Cayenne and British Guiana, west to Guía, Rio Negro; idem, P.Z.S.Lond., 1867, p. 580—Guía, Rio Negro; Pelzeln, Orn. Bras., 2, p. 133, 1868—Borba (Rio Madeira), Barra do Rio Negro [=Manáos], Rio Xíe, Rio Içanna, and Rio Vaupé, Brazil; Salvin, Ibis, 1885, p. 305—Bartica Grove, Camacusa, Merumé Mountains, Atapurow River; Sclater, Cat. B. Brit. Mus., 14, p. 387, 1888—Cayenne, Bartica Grove, Atapurow River, Camacusa, Maroni River; Ihering, Rev. Mus. Paul., 6, p. 435, 1905—RioJuruá; Berlepsch, Nov. Zool., 15, p. 142, 1908—Cayenne; Penard and Penard, Vog. Guyana, 2, p. 170, 1910—Surinam.
- Xipholena punicea IHERING and IHERING, Cat. Faun. Braz., 1, p. 314, 1907—British Guiana and Rio Juruá, Brazil; BERLEPSCH, Nov. Zool., 15, p. 321, 1908—Cayenne; HELLMAYR, l.c., 17, p. 316, 1910—Borba, Rio Madeira; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 357, 1914—Rio Jamundá (Faro) and upper Rio Negro; Chubb, Birds Brit. Guiana, 2, p. 302, 1921—numerous localities.

Range: French, Dutch, and British Guiana, and northern Brazil (east of Manáos north of the Amazon only, but farther west also south of that river from the Rio Madeira at least to the Juruá).²

4: British Guiana (Demerara River 3, unspecified 1).

*Xipholena lamellipennis (Lafresnaye). Lafresnaye's Chatterer.

Ampelis lamellipennis LAFRESNAYE, Mag. Zool., (2), 1, cl. 2, pl. 9, 1839—"I'Amérique du Sud," we specify Pará.

Xipholena lamellipennis Sclater and Salvin, Exotic Orn., p. 10, 1866—Pará; idem, P.Z.S.Lond., 1867, p. 580—Pará; Pelzeln, Orn. Bras., 2, p. 133, 1868—Pará; Sclater, Cat. B. Brit. Mus., 14, p. 389, 1888—Pará; Hellmayr, Nov. Zool., 12, p. 295, 1905—Igarapé-assú, Pará; Snethlage, Journ. Orn., 55, p. 292, 1907—Pará, Santo Antonio do Prata; Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 100, 1910; l.c., p. 154, 1925—Miritiba, Maranhão; Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 35, 91, 1912—Peixe-Boi, Ipitinga (Pará localities); Snethlage, Bol. Mus. Goeldi, 8, p. 357, 1914—Pará, Providencia, Bene-

¹Daubenton's unusually poor figure appears to have been taken from a female example of the Pompadour Chatterer.

²Material examined.—French Guiana: Cayenne 5.—British Guiana: Demerara River 5, Bartica Grove 3.—Brazil: Rio Negro 5; Borba, Rio Madeira 1; Rio Juruá 1.

vides, Santo Antonio do Prata, Rio Tocantins (Mazagão, Cametá, Baião), and Rio Tapajóz (Boim); Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928—Pinheiro, Pará.

Range: Northern Brazil south of the Amazon, from the Tapajóz to Pará and extending east into the northern districts of Maranhão (Miritiba).¹

1: "Brazil" (unspecified 1).

*Xipholena atro-purpurea (Wied). WIED'S CHATTERER.

Ampelis atro-purpurea WIED, Reise Bras., 1, p. 262 (8vo ed., p. 260), 1820— Morro d'Arára, Mucuri River, Espirito Santo.

Ampelis purpurea Lichtenstein, Verz. Dubl. Berliner Mus., p. 57, 1823—Bahia (descr. of adult and immature male); Wied, Beitr. Naturg. Bras., 3, (1), p. 397, 1830—Lagôa d'Arára, Espirito Santo; Burmeister, Syst. Übers. Th. Bras., 2, p. 428, 1856—Nova Friburgo, Rio.

Xipholena atropurpurea Sclater and Salvin, Exotic Orn., p. 9, pl. 5, 1866—wooded region of eastern Brazil; Sclater, Cat. B. Brit. Mus., 14, p. 388, 1888—Pernambuco and Bahia, Brazil; Allen, Bull. Amer. Mus. N.H., 2, p. 241, 1889—Rio Mucuri (note on type); Ihering, Rev. Mus. Paul., 4, p. 156, 1900—Nova Friburgo; idem, Cat. Faun. Braz., 1, p. 314, 1907—Bahia and Espirito Santo; Lima, Rev. Mus. Paul., 12, (2), p. 100, 1920—southern Bahia.

Xipholena purpurea Pelzeln, Orn. Bras., 2, p. 133, 1868—Brazil=Bahia (plumages).

Range: Wooded region of eastern Brazil, from Pernambuco south to Espirito Santo and Rio de Janeiro (Nova Friburgo).

4: Brazil (Santo Amaro, Bahia 3; Bahia 1).

Genus CARPODECTES Salvin.2

Carpodectes Salvin, P.Z.S.Lond., "1864," p. 583, pub. April, 1865—type Carpodectes nitidus Salvin.

Carpodectes nitidus nitidus Salvin. Snowy Cotinga.

Carpodectes nitidus Salvin, P.Z.S.Lond., "1864," p. 583, pl. 36, pub. April, 1865—Tucurriqui, Costa Rica; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 8, p. 183, 1865—Greytown, Nicaragua; idem, l.c., 9, p. 117, 1868—Tucurriquí, Costa Rica; Boucard, P.Z.S.Lond., 1878, p. 65—San Carlos, Costa Rica (descr. of female); Ridgway, Proc. U.S.Nat. Mus., 1, p. 255, 1878—Pacuaré, Costa Rica (descr. of young male); idem, l.c., 11, p. 544, 1888—

¹Material examined.—Pará district (Pará, Igarapé-assú, Ipitinga, Peixe-Boi, etc.) 15; Miritiba, Maranhão 2.

²The three members of the genus, while presenting excellent distinguishing characters, are clearly but races of a single specific unit.

Pacuaré (descr. of imm. male); Zeledón, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—Carrillo and Pacuaré; Sclater, Cat. B. Brit. Mus., 14, p. 389, 1888—Tucurriquí; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 140, pl. 42 (male, female), 1891—Nicaragua (Greytown) and Costa Rica (Tucurriquí, Pacuaré, San Carlos); Richmond, Proc. U.S. Nat. Mus., 16, p. 509, 1893—Río Frío, Costa Rica and Río Escondido, Nicaragua; Bangs, Bull. Mus. Comp. Zool., 39, p. 150, 1903—Ceiba, Honduras; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 788, 1907—Atlantic slope of Costa Rica and Nicaragua; Carrillo, Pacuarito, Guacimo, Limón, Reventazón, Guapiles, Costa Rica; Rendahl, Ark. Zool., 12, No. 8, p. 23, 1919—Pacuarito, Costa Rica; Kennard and Peters, Proc. Boston Soc. N.H., 38, p. 458, 1928—Almirante, Panama.

Range: Caribbean slope of Honduras (Ceiba), Nicaragua, Costa Rica, and extreme northern Panama (Almirante Bay).

*Carpodectes nitidus antoniae Ridgway. Antonia's Cotinga.

Carpodectes antoniae (Zeledón MS.) Ridgway, Ibis, (5), 2, p. 27, pl. 2 (male), Jan., 1884—Pirris, southwestern Costa Rica; idem, Proc. U.S.Nat. Mus., 6, No. 26, "1883," p. 410, April, 1884—Pirris; idem, l.c., 10, p. 20, 1887—Pirris (descr. of female); Zeledón, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—Pozo Azul de Pirris; Sclater, Cat. B. Brit. Mus., 14, p. 389, 1888—western Costa Rica; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 141, 1891—Pirris; Bangs, Proc. New Engl. Zool. Cl., 3, p. 41, 1902—Pedregal, Chiriquí, Panama; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 789, 1907—Pacific slope of Costa Rica and western Panama; Carriker, Ann. Carnegie Mus., 6, p. 674, 1910—Pozo Azul de Piris, Costa Rica.

Range: Pacific slope of Costa Rica (Pozo Azul de Pirris and Pigres) and western Panama (Chiriquí).

1: Costa Rica (Pozo Azul de Pirris 1).

Carpodectes nitidus hopkei Berlepsch. 1 HOPKE'S COTINGA.

Carpodectes hopkei Berlepsch, Orn. Monatsber., 5, p. 174, 1897—San José, Río Dagua, Colombia (type examined); Hartert, Nov. Zool., 9, p. 611, 1902—Ventana, Ecuador (spec. examined); Hellmayr, P.Z.S.Lond., 1911, p. 1147—Nóvita, Chocó, Colombia (crit., plumages); Chapman, Bull. Amer. Mus. N.H., 36, p. 499, 1917—Iguamiandó, Chocó, Colombia; idem, l.c., 55, p. 552, 1926—Ecuador.

Range: Pacific coast of Colombia (Nóvita, Iguamiandó, Río Dagua) and northwestern Ecuador (Ventanas, prov. Esmeraldas).

¹Carpodectes nitidus hopkei Berlepsch: Immediately recognizable from its allies by much larger size, black bill, and by the black apical spots on the six outer primaries and the central rectrices of the adult males. Wing (male) 158-171, (female) 140-145; tail 95-102, (female) 85-90; bill 20-22, (female) 18-20.

Material examined.—Colombia: Nóvita, Río Tamaná 13, San José, Río

Dagua 11.—Ecuador: Ventanas, prov. Esmeraldas 3.

Genus EUCHLORNIS Filippi.1

- Euchlornis Filippi, Mus. Mediol., No. I., Anim. Vertebr., Cl. 2, (Aves), pp. 12, 31, 1847—type Ampelis riefferii Boissonneau.
- Pyrrhorhynchus Lafresnaye, Rev. Mag. Zool., (2), 1, p. 103, 1849—type by subs. desig. (Sclater, Ibis, 1878, p. 166) Ampelis viridis Lafresnaye and D'Orbigny.
- Pyrorhynchus Bonaparte, Ateneo Italiano, 2, No. 11, p. 315 (=Consp. Voluc. Anisod., p. 5), 1854—emendation of Pyrrhorhynchus Lafresnaye.
- Euchlorornis Cabanis and Heine, Mus. Hein., 2, p. 103, 1859—emendation of Euchlornis Filippi.
- *Euchlornis riefferii melanolaema (Sclater). Venezuelan Fruiteater.
 - Pipreola melanolaema Sclater, Ann. Mag. Nat. Hist., (2), 17, p. 469, 1856—
 "in Venezuela, Caraccas" (type in Paris Museum examined); Sclater and
 Salvin, P.Z.S.Lond., 1868, p. 628—Caracas; idem, l.c., 1870, p. 781—
 upper wood region of Mérida; Sclater, Ibis, 1878, p. 167—part, Caracas,
 Mérida, Venezuela; idem, Cat. B. Brit. Mus., 14, p. 377, 1888—part,
 spec. a-d, Caracas, Mérida, Venezuela.
 - Euchlornis viridis melanolaema Hellmayr, Verh. Orn. Ges. Bay., 12, p. 208, 1915—Silla de Caracas and Andes of Mérida.

Range: Subtropical Zone of northwestern Venezuela, from Caracas to Mérida.²

- 5: Venezuela, Andes of Mérida (El Valle 2, Río Mucujón 3).
- *Euchlornis riefferii riefferii (Boissonneau). Rieffer's Fruit-eater.

Ampelis riefferii Boissonneau, Rev. Zool., 3, p. 3, 1840—Santa Fé de Bogotá; Hartlaub, Rev. Mag. Zool., (2), 1, p. 494, 1849—Colombia.

Pipreola riefferi Sclater, P.Z.S.Lond., 22, p. 113, 1854—Quixos, Ecuador; idem, l.c., 23, p. 153, 1855—Bogotá; idem, Ibis, 1878, p. 166—Bogotá and "vicinity of Quito" =eastern Ecuador; Sclater and Salvin, P.Z.S.Lond., 1879, p. 519—Retiro, Medellín, and Santa Elena, Antioquia; Berlepsch Journ. Orn., 32, p. 306, 1884—Bucaramanga; idem, Zeits. Ges. Orn., 4, p. 184, 1887—Bogotá; Sclater, Cat. B. Brit. Mus., 14, p. 377, 1888—Bogotá, Retiro, Santa Elena, "vicinity of Quito" and "San Lucas, Ecuador"; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 17, 1899—Pun, Ecuador; Piguet, Mém. Soc. Neuchât. Sci. Nat., 5, p. 808, 1914—Cafetal La Camelia, near Angelopolis, Antioquia.

¹An earlier name is probably *Pipreola* Swainson (Anim. Menag., p. 357, Dec., 1837—type by monotypy *Pipreola chlorolepidota* Swainson), but as long as the genotype has not been identified beyond doubt, it cannot be accepted under the present rules of nomenclature.

²Birds from Mérida generally have the upper parts slightly more yellowish green, and the whitish apical edges to the lateral rectrices hardly suggested.

Material examined.—North coast mountains, near Caracas (Silla de Caracas and Cerro del Avila) 26.—Andes of Mérida: El Valle 4, Escorial 2, La Hechisera 2, Río Mucujón 3.

Euchlornis viridis riefferii Hellmayr, Verh. Orn. Ges. Bay., 12, p. 208, 1915 —Colombia (Bogotá, Antioquia).

Euchlornis riefferi riefferi CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 498, 1917—Fusugasugá, El Roble, and Subia (Eastern Andes), El Eden and Santa Elena (northern Central Andes), Colombia; idem, l.c., 55, p. 549, 1926—Sabanilla, Macas region, Baeza, below Oyacachi, and upper Sumaco, eastern Ecuador.

Range: Subtropical Zone of eastern Ecuador and northern Central as well as Eastern Andes of Colombia, east to the Venezuelan line (Páramo de Tamá).¹

7: Colombia (Bogotá 2; El Eden, East Quindio Andes 1; Páramo de Tamá, Santander 4).

*Euchlornis riefferii occidentalis Chapman.² West Andean Fruitbater.

Euchlornis riefferi occidentalis Chapman, Bull. Amer. Mus. N.H., 33, p. 630, 1914—San Antonio, Western Andes, Colombia; idem, l.c., 36, p. 498, 1917—San Antonio, Cerro Munchique, La Florida, Cocal, and Almaguer (Western Andes), and (?) Salento (west slope of Central Andes), Colombia; idem, l.c., 55, p. 549, 1926—"Gualea," Verdecocha, and Salvias, Ecuador.

Pipreola melanolaema (not of Sclater, 1856) Sclater, P.Z.S.Lond., 28, p. 67, 1860—Chillanes, above Pallatanga, Ecuador; idem, Ibis, 1878, p. 167—part, Chillanes and Intaj [=Intac], Ecuador; idem, Cat. B. Brit. Mus., 14, p. 377, 1888—part, spec. e-g, Intac and Chillanes, Ecuador; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 17, 1899—Nanegal; Ménégaux, Miss. Serv. Géogr. Armée Mes. Arc Mérid. Equat., 9, p. B63, 1911—Canchacoto (above Santo Domingo) and Gualea, Ecuador.

¹Birds from the Páramo de Tamá form the transition to E. r. melanolaema, and one of our specimens (an adult male) approaches it very closely. Three adult males from the northern section of the Central Andes (Santa Elena, El Eden) and one from Pun, northeastern Ecuador agree with the average of Bogotá skins. The localities "Vicinity of Quito" and "San Lucas, Ecuador," given by Sclater, are doubtless incorrect, the only form found on the western slope of the Ecuadorian Andes being the dark-headed E. r. occidentalis.

Material examined.—Colombia: Bogotá 14; Santa Elena, Antioquia 2; El Eden, East Quindio Andes 1.—Ecuador: Pun 1, "near Baños" 2.

²Euchlornis riefferii occidentalis Chapman: Most nearly related to, and agreeing in blackish head with, E. r. melanolaema, but upper parts rather darker (less yellowish) green; edges to greater upper wing coverts broader, less sharply defined, and wholly green, there being at best a narrow yellowish fringe at the very tip; tertials with much more green, this color occupying the whole of the outer web, and the whitish apical edges decidedly narrower. Wing (adult males) 92-95; tail 70-73; bill 14-15.

Birds from Ecuador agree with those from Colombia in wing markings, but approach *E. r. chachapoyas* in having the middle as well as the sides of the posterior under parts spotted with green.

Material examined.—Colombia: San Antonio 6, Almaguer 1.—Ecuador: above Gualea 2, Mindo 1, Nanegal 3, Canchacoto 1, "Ambato" 1.

Pipreola riefferi (not of Boissonneau) Goodfellow, Ibis, 1901, p. 713—Mindo, Ecuador (spec. examined).

Euchlornis (Pipreola) melanolaema Lönnberg and Rendahl, Ark. Zool., 14, No. 25, p. 76, 1922—road to Nanegal, near Mindo, and road to Gualea, Ecuador.

Range: Subtropical Zone of western Ecuador and Western Andes of Colombia.¹

3: Colombia (San Antonio 1; Almaguer, Cauca 1); Ecuador (Nanegal 1).

Euchlornis riefferii chachapoyas Hellmayr.² Chachapoyas Fruit-EATER.

Euchlornis viridis chachapoyas Hellmayr, Verh. Orn. Ges. Bay., 12, p. 206, July, 1915—Chachapoyas, northern Peru.

Pipreola riefferi (not of Boissonneau) Taczanowski, P.Z.S.Lond., 1882, p. 24—Tamiapampa, Peru; idem, Orn. Pér., 2, p. 375, 1884—Tamiapampa.

Pipreola viridis (not of LAFRESNAYE and D'ORBINGY) MÉNÉGAUX, Rev. Franç. d'Orn., 2, p. 8, 1911—part, Nuevo Loreto, east of Tayabamba, Peru (descr. of female; spec. in Paris Museum examined).

Range: Northern Peru, in depts. of Amazonas (Chachapoyas, San Pedro, Tamiapampa) and Libertad (Nuevo Loreto, prov. Pataz).

Euchlornis intermedia intermedia (Taczanowski).* Intermediate Fruit-eater.

Pipreola viridis intermedia Taczanowski, Orn. Pér., 2, p. 376, 1884—Maraynioc, dept. Junín, Peru; Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 370—Chilpes, Vitoc, and Culumachay, Maraynioc, dept. Junín.

¹The northwestern limit of its range cannot at present be defined, and until adult males become available for comparison, it will be impossible to decide whether a single female from Salento (east of Cartago), on the west slope of the Central Andes, in the American Museum is referable to occidentalis or riefferii.

²Euchlornis riefferii chachapoyas Hellmayr: Adult male similar to E. r. occidentalis, but wings shorter and bill smaller; upper parts deeper, more bluish green; yellow collar around the hind neck either complete or interrupted but for a short distance in the middle; no plain yellow abdominal line, the median under parts being spotted with green like the sides and flanks; tail without any, or with mere traces of, white apical edges; female exactly like E. r. occidentalis in coloration, but smaller. Wing (adult males) 86½-91, twice 92, (female) 83; tail 67-75; bill 12.

Material examined.—Peru: Chachapoyas 12, San Pedro 1, Nuevo Loreto 2.

³Euchlornis intermedia intermedia (TACZANOWSKI) appears to constitute a distinct species, as I am led to believe by material recently examined in the Paris Museum. It differs from E. riefferii chachapoyas and its northern allies by larger size; deep black head all round, with large glossy steel-blue marginal edges; bicolored tail, the entire inner web and a distinct subapical band across the outer web of the five outer rectrices being black in abrupt contrast to the green of the remaining portion, while the median pair is provided with a black subapical

- Ampelis viridis (not of Thunberg) Tschudi, Arch. Naturg., 10, (1), p. 269, 1844—Peru; idem, Untersuch. Faun. Peru., Aves, p. 135, 1846—Montañas of central Peru (descr. of female).
- Pipreola viridis Taczanowski, P.Z.S.Lond., 1874, p. 540—Maraynioc, Peru; Sclater, Ibis, 1878, p. 167—part, Junín destrict, Peru; idem, Cat. B. Brit. Mus., 14, p. 378, 1888—part, spec. a, Pumamarca; Ménégaux, Rev. Franç. d'Orn., 2, p. 8, 1911—part, Cumpang, east of Tayabamba, Peru (spec. in Paris Museum examined).

Range: Subtropical Zone of central and northern Peru, in depts. of Junín (Rumicruz, Maraynioc, Chilpes, Culumachay, Pumamarca) and Libertad (Cumpang).

Euchlornis intermedia signata Hellmayr. D'Orbigny's Fruit-eater.

- Ampelis viridis (not of Thunberg, 1823) Lafresnaye and d'Orbigny, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 40, 1837—Yungas, Bolivia (type in Paris Museum examined; =female); d'Orbigny, Voyage Amér. Mérid., Ois., p. 298, pl. 31, fig. 2, 1839—Chulumani, Yungas of La Paz, Bolivia.
- Euchlornis riefferii signata Hellmayr, Verh. Orn. Ges. Bay., 13, p. 199, 1917—new name for Ampelis viridis Lafresnaye and D'Orbigny, preoccupied; idem, Nov. Zool., 32, p. 13, 1925—Yungas (note on type).
- Pipreola melanolaema (not of SCLATER, 1856) SCLATER and SALVIN, P.Z.S. Lond., 1873, p. 186—Huasampilla, Peru; SCLATER, l.c., 1873, p. 780—Huasampilla.
- Pipreola viridis Sclater, Ibis, 1878, p. 167—part, descr. and hab. Andes of Cuzco and Bolivia; Sclater and Salvin, P.Z.S.Lond., 1879, p. 618—Chulumani and Tilotilo, Bolivia; Sclater, Cat. B. Brit. Mus., 14, p. 378, 1888—part, spec. b-g, Huasampilla, Peru and Tilotilo, Bolivia.

band (about 12 mm. wide) across the whole width of the feather; very conspicuous white apical edges to all of the rectrices and remiges, excepting the two outermost primaries, and by having the under parts (below the black foreneck) densely variegated all over with greenish black squamate markings. The female, except for lacking the black head, exhibits similar difference. Wing 99, (female) 95; tail 87, (female) 81; bill 13.

The late G. A. Baer, in August, 1900, obtained a single adult male in perfect plumage at Cumpang, alt. 2400 meters, east of Tayabamba, dept. Libertad, which seems to be inseparable from topotypical examples of E. i. intermedia, while in the same general region, though at a lower altitude, at Nuevo Loreto, alt. 1200 meters, a pair of E. r. chachapoyas was secured by the same collector in July, 1900. Although there may be a difference in the vertical distribution of the two forms, it seems advisable to regard them—at least, for the present—as specifically distinct.

Material examined.—Peru: Rumicruz, alt. 9700 ft., dept. Junín (American Museum of Natural History, New York) 2; Cumpang, alt. 2400 meters, dept. Libertad (Paris Museum) 1.

¹Euchlornis intermedia signata Hellmayr: Similar to E. i. intermedia, but adult male with a post-auricular band of lemon chrome across sides of neck, and with the middle of the breast and abdomen extensively plain (unmarked) bright yellow; female with yellow orbital ring much more conspicuous, lores and upper throat strongly suffused with yellowish, etc. Wing 98-100, (female) 91-98; tail 85-87, (female) 80-87; bill 13-14.

Range: Subtropical Zone of southeastern Peru (Huasampilla, dept. Cuzco; below Limbani, dept. Puno) and Bolivia (Yungas of La Paz and Cochabamba).¹

Euchlornis lubomirskii (Taczanowski).2 Lubomirski's Fruit-eater.

- Pipreola lubomirskii Taczanowski, P.Z.S.Lond., 1879, p. 236, pl. 22— Tambillo, dept. Cajamarca, Peru; idem, Orn. Pér., 2, p. 377, 1884— Tambillo; Sclater, Cat. B. Brit. Mus., 14, p. 380, 1888—Tambillo; Goodfellow, Ibis, 1901, p. 713—Baeza, eastern Ecuador (spec. examined).
- Euchlornis lubomirskii Chapman, Bull. Amer. Mus. N.H., 36, p. 499, 1917— La Candela, sources of the Magdalena River, Colombia; idem, l.c., 55, p. 550, 1926—below Oyacachi, Ecuador.
- (?) Pipreola chlorolepidota (not of SWAINSON) SCLATER, P.Z.S.Lond., 27, p. 441, 1859—Río Napo, Ecuador.
- (?) Pipreola formosa (not of HARTLAUB) SCLATER, Cat. B. Brit. Mus., 14, p. 378, 1888—part, spec. f, Río Napo.

Range: Subtropical Zone of southern Colombia (La Candela, head of the Magdalena Valley), eastern Ecuador (Baeza; below Oyacachi), and northern Peru (Tambillo, prov. Jaen).

Euchlornis jucunda (Sclater).3 YELLOW-VENTED FRUIT-EATER.

Pipreola jucunda Sclater, P.Z.S.Lond., 28, p. 89, pl. 160, 1860—Cachi-Llacta, near Nanegal, Ecuador (descr. of male); idem, Ibis, 1878, p. 171—Ecuador (monog., descr. of female); Taczanowski and Berlepsch, P.Z.S.Lond., 1884, p. 298—Cayandeled; Sclater, Cat. B. Brit. Mus., 14,

¹Two specimens from below Limbani, the male unfortunately immature, appear to be inseparable from a Bolivian series, except by smaller size.

Material examined.—Peru: below Limbani, northern Puno 2.—Bolivia: Chulumani (the type) 1; Chaco, near La Paz 3; San Antonio 1; Sandillani 7; Cocapata 4; San Cristóbal 1; Incachaca, Cochabamba 6; Yungas of Cochabamba 1.

²Euchlornis lubomirskii (Taczanowski): Differs from the E. riefferii group by lacking the yellow band across the sides of the neck and nape, as well as the white apical edges to the inner secondaries and lateral rectrices; by having the tertials entirely green, including their inner webs, and the lower surface of the tail tinged with glaucous. Besides, the head and throat, in the adult male, are even deeper black than in E. intermedia, while the middle of the breast and abdomen is uniform bright yellow, without any greenish markings. Wing 91-96, (female) 92; tail 64-68; bill 14-15.

E. lubomirskii is nearly related to, and resembles, E. jucunda in the absence of white markings on wings and tail, glaucous olive under surface of the rectrices, and wholly green tertials, but differs in that the male has the foreneck (like the throat) glossy black instead of orange, whereas the female may be distinguished by lacking the crescent of orange yellow streaks across the foreneck.

Material examined.—Ecuador: Baeza 6.—Peru: Tambillo I.

³Euchlornis jucunda (SCLATER): Adult male agreeing with E. pulchra in the large, wholly orange bill, in possessing an orange post-auricular band across sides of neck and an orange yellow jugular area, as well as in lacking every trace of white apical margins to remiges and rectrices; but somewhat smaller; top and sides of the head and upper throat (chin) glossy black (instead of dusky green);

p. 381, 1888—Cachi-Llacta, Intac, and "Quito", western Ecuador; Goodfellow, Ibis, 1901, p. 713—Nanegal; Ménégaux, Miss. Serv. Géog. Armée Mes. Arc Mérid. Equat., 9, p. B63, 1911—Gualea.

Euchlornis (Pipreola) jucunda Lönnberg and Rendahl, Ark. Zool., 14, No. 25, p. 76, 1922—road to Gualea and Mindo, Ecuador.

Euchlornis jucunda Chapman, Bull. Amer. Mus. N.H., 55, p. 550, 1926—"Quito."

Range: Subtropical Zone of western Ecuador.

Euchlornis pulchra Hellmayr. 1 BEAUTIFUL FRUIT-EATER.

Ampelis elegans (not of THUNBERG, 1823) TSCHUDI, Arch. Naturg., 9, (1), p. 385, 1843—"ad flumen Tullumayo," dept. Junín, Peru (descr. of male); idem, l.c., 10, (1), p. 269, 1844—Peru; idem, Untersuch. Faun. Peru., Aves, p. 135, 1846—Peru; HARTLAUB, Rev. Mag. Zool., (2), 1, p. 494, 1849—part, Peru.

Euchlornis pulchra HELLMAYR, Verh. Orn. Ges. Bay., 13, p. 199, 1917—new name for Ampelis elegans Tschudi, preoccupied.

Pipreola elegans Sclater, Ibis, 1878, p. 172—Peru (descr. of type); Taczanowski, Orn. Pér., 2, p. 378, 1884—near Achamal, Peru (descr. of ?); Sclater, Cat. B. Brit. Mus., 14, p. 381, 1888—Peru (descr. of male); Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 370—Garita del Sol, Vitoc, Peru; Ménégaux, Rev. Franç. d'Orn., 2, p. 8, 1911—Cueva Seca, Río Tocache, Peru (spec. in Paris Museum examined).

blackish border to orange jugular area interrupted in the middle; yellow zone along middle of breast and abdomen brighter and much more extensive. Wing 90-93; tail 60-63; bill 15-16.

The male of this form stands somewhat between E. pulchra and E. lubomirskii, and combines the orange yellow post-auricular band and jugular area of the former with the glossy black head and extensive bright yellow abdominal zone of the latter.

Material examined.—Ecuador: Cayandeled 4, Nanegal 1, Gualea 2, Mindo 2, "Quito" 3.

¹Euchlornis pulchra Hellmayr, together with E. lubomirskii and E. jucunda, forms a natural group in the genus, and when we shall have acquired a fuller knowledge of their ranges and variation, it may be found necessary to merge them into a single specific unit. In the male sex, it differs from both of its allies by dusky green (instead of glossy black) head and upper throat. On the under parts, it is very similar to E. jucunda and, like this species, has on the sides of the neck a broad orange yellow post-auricular band, margined posteriorly by blackish; however, it can be easily told by the black border to the orange yellow jugular area being continuous, and by the much paler as well as much less extensive yellow abdominal area. The female closely resembles that of E. aureopectus, but lacks the yellowish white apical margins to lateral remiges and inner remiges. Wing 95 (Cushi Libertad), 101 (Cueva Seca), (female) 93; tail 67-78; bill 14-15.

An adult male from Cueva Seca, alt. 1800 meters, Libertad, differs from two from central Peru (Cushi Libertad and Garita del Sol) by having the blackish border to the orange yellow jugular area medially interrupted, and approaches in that respect the Ecuadorian *E. jucunda*.

Material examined.—Peru: Garita del Sol, Vitoc (adult male) 1; Chelpes, Junín (female) 1; Cushi Libertad, alt. 1820 meters, Huánuco (adult male) 1; Cueva Seca, alt. 1800 meters, Libertad (adult male) 1.

Pipreola aureipectus (not of LAFRESNAYE) TACZANOWSKI, P.Z.S.Lond., 1882, p. 24-Achamal, near Chirimoto, Peru.

Range: Subtropical Zone of Peru, in depts, of San Martín (near Achamal, Río Huambo; Cueva Seca, Río Tocache), Huánuco (Cushi Libertad), and Junin (Río Tulumayo: Garita del Sol, Vitoc: Chelpes).

Euchlornis aureopectus festiva Todd. Todd's Golden-Breasted FRUIT-EATER.

Euchlornis aureipectus festiva Todd, Ann. Carnegie Mus., 8, p. 211, 1912-Cumbre de Valencia, Carabobo, Venezuela (type in Carnegie Museum

Pipreola aureipectus (not Ampelis aureopectus LAFRESNAYE) SCLATER, Ibis, 1878, p. 171—part, Caracas, Venezuela; idem, Cat. B. Brit. Mus., 14, p. 380, 1888-part, spec. a-g, Caracas, Venezuela.

Euchlornis aureopectus aureopectus Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 94, 1911-La Cumbre de Valencia, Carabobo (crit.).

Range: Subtropical Zone of coast ranges of northern Venezuela, in state of Carabobo (Cumbre de Valencia) and Distrito Federal (Silla de Caracas: Galipán, Cerro del Ávila).

*Euchlornis aureopectus aureopectus (Lafresnave). Golden-BREASTED FRUIT-EATER.

Ampelis aureo-pectus LAFRESNAYE, Rev. Zool., 6, p. 68, 1843-Santa Fé de Bogotá; idem, Mag. Zool., (2), 5, cl. 2, pl. 39, 1843—Santa Fé de Bogotá; HARTLAUB, Rev. Mag. Zool., (2), I, p. 494, 1849—part, Bogotá.

Pipreola aureipectus Sclater, P.Z.S.Lond., 23, p. 153, 1855-Bogotá; idem, Ibis, 1878, p. 171-part, Antioquia and Bogotá, Colombia; idem and SALVIN, P.Z.S.Lond., 1879, p. 380-"Antioquia" = Concordia, Colombia; SCLATER, Cat. B. Brit. Mus., 14, p. 380, 1888-part, spec. h,i, Concordia,

Euchlornis aureipectus aureipectus Todd, Ann. Carnegie Mus., 8, p. 211 (in text), 1912-Bogotá; Guárico and Anzoátegui, Lara, Venezuela (spec.

¹ Euchlornis aureopectus festiva Todd: Adult male similar to E. a. aureopectus, but yellow area underneath much larger, extending in a broad zone down to the anal region, only the sides of the breast and flanks being spotted or streaked with green; female not distinguishable. Size perhaps larger on the average.

Various specimens show a few narrow yellow cross-bands on the sides of the

neck, and an adult male from Galipán possesses even a well-defined post-auricular band, very nearly as wide as in *E. a. decora*.

Material examined.—Venezuela, Distrito Federal: Galipán, Cerro del Ávila 19; Silla de Caracas 2; La Cumbre de Valencia, Carabobo 15.

Length of wing in adult males in millimeters:

E. a. aureopectus.—Bogotá, 90, 93, 94; La Palmita, Santander, 88, 90, 90, 92, 94; Pedregosa, Mérida, 93; Guamito, Trujillo, 92, 92, 96; Anzoátegui, Lara, 90; Guárico, Lara, 90, 94.

E. a. festiva.—Galipán, Cerro del Ávila, near Caracas, 89, 90, 91, 91, 94, 94, 95, 95, 96, 96; Cumbre de Valencia, Carabobo, 93½, 95, 95, 95, 97, 99.

Ranges: Subtropical Zone of western Venezuela (in states of Lara, Trujillo, and Mérida) and of the Eastern and Western Andes of Colombia (Bogotá; La Palmita, Santander; Concordia, Antioquia).¹

2: Venezuela, Mérida (Pedregosa 1; Nevados 1).

Euchlornis aureopectus decora (Bangs).² Santa Marta Fruit-EATER.

Pipreola aureipectus decora Bangs, Proc. Biol. Soc. Wash., 13, p. 98, 1899—Chirua, Santa Marta region; Allen, Bull. Amer. Mus. N.H., 13, p. 155, 1900—Valparaiso and El Libano, Santa Marta region.

Euchlornis aureopectus decora Todd and Carriker, Ann. Carnegie Mus., 14, p. 332, 1922—El Libano, Valparaiso, Cincinnati, Las Taguas, Las Vegas, San Miguel, and Sierra Nevada de Santa Marta.

Range: Subtropical Zone of Santa Marta Range in northern Colombia.

Euchlornis frontalis frontalis Sclater. BOLIVIAN FRUIT-EATER.

Euchlornis frontalis Sclater, P.Z.S.Lond., 26, p. 446, 1858—Bolivia (descrof female; type in Derby Museum, Liverpool).

Pipreola frontalis Sclater, Ibis, 1878, p. 169, pl. 6—Tilotilo, Bolivia (descr. of male and female); idem and Salvin, P.Z.S.Lond., 1879, p. 618—Tilotilo (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 379, 1888—part, spec. b,c, Tilotilo; Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 370—Garita del Sol, Vitoc, dept. Junín.

¹Adult males from the western districts of Venezuela (Guárico and Anzoátegui, Lara; Guamito, Trujillo; Pedregosa, Mérida) agree with a series from the East Colombian Andes (La Palmita, Santander) in having the bright yellow area beneath restricted to throat and foreneck and well defined posteriorly, while the rest of the under parts is heavily spotted or streaked with green, leaving but a narrow, indistinct unmarked pale yellow abdominal line. Only one male from Bogotá and another from La Palmita (Carnegie Museum, No. 55061) approach E. a. festiva, being, however, more boldly striped below.

According to Chapman (Bull. Amer. Mus. N.H., 55, p. 551, 1926), the bird from Buenavista, Nariño, southwestern Colombia, previously recorded as E. jucunda (l.c., 36, p. 499, 1917), is probably referable to a form of E. aureopectus.

Material examined.—Colombia: Bogotá 4; La Palmita, Santander 9.— Venezuela: Guárico, Lara 4; Anzoátegui, Lara 2; Guamito, Trujillo 6; Pedregosa, Mérida 1; Nevados, Mérida 1.

²Euchlornis aureopectus decora (Bangs): Similar to E. a. aureopectus, but somewhat smaller, and adult male with a distinct post-auricular band of bright yellow across sides of neck. Wing 83-88, (female) 84; tail 63-67; bill 12-13. Six specimens from Valparaiso, El Libano, etc., examined.

*Pipreola chlorolepidota SWAINSON (Anim. Menag., p. 357, Dec., 1837—Peru) appears to have been based on a female of this section, but I cannot make it fit either frontalis or squamipectus. The passage "chin with a central stripe of orange yellow" would seem to correspond to frontalis, while the description of the under parts "yellow, each feather having a green border and an additional blackish lunule in the centre, only seen when the feathers are raised" applies better to squamipectus. The type, which is unfortunately lost, probably came from northern Peru, whence no material is available.

Euchlornis frontalis frontalis Chapman, Amer. Mus. Novit., 187, p. 6, 1925—Santo Domingo and Río Inambari, Carabaya, Peru.

Range: Southern Peru, in depts. of Junín (Garita del Sol, Vitoc) and northern Puno (Santo Domingo and Río Inambary, northern slope of Sierra de Carabaya), and Bolivia (Yungas of La Paz and Cochabamba).

Euchlornis frontalis squamipectus Chapman.² Scaly-breasted Fruit-eater.

Euchlornis frontalis squamipectus Chapman, Amer. Mus. Novit., 187, p. 5, 1925—Zamora, eastern Ecuador; idem, Bull. Amer. Mus. N.H., 55, p. 549, 1926—near Macas and Zamora, Ecuador.

Pipreola frontalis (not of Sclater) Sclater, Cat. B. Brit. Mus., 14, p. 379, 1888—part, spec. a, Pindo, Ecuador (spec. examined).

Range: Eastern Ecuador (Zamora; Pindo; near Macas).

Euchlornis formosa³ formosa (Hartlaub). HANDSOME FRUIT-EATER.

Ampelis formosa Hartlaub, Rev. Mag. Zool., (2), 1, pp. 275, 493, pl. 14, fig. 1, 1849—Venezuela = Caracas.

Pipreola formosa Sclater and Salvin, P.Z.S.Lond., 1869, p. 252—Coast Range of Puerto Cabello, Venezuela; Sclater, Ibis, 1878, p. 168—part, Caracas; idem, Cat. B. Brit. Mus., 14, p. 378, 1888—part, spec. c-e, Caracas and Puerto Cabello.

Euchlornis formosa HELLMAYR and SEILERN, Arch. Naturg., 78, A, Heft 5, p. 93, 1912—Cumbre de Valencia, Carabobo (crit.).

Range: Subtropical Zone of northern Venezuela, from the Distrito Federal (Caracas region) through Carabobo (La Cumbre de Valencia; Las Quiguas) west to Lara (Lagunita de Aroa).⁴

¹A single male from Junin (Garita del Sol) agrees with others from more southern localities.

Material.—Peru: Garita del Sol, Junín 1; Santo Domingo, Puno 4.—Bolivia: Tilotilo 2; Yungas de Samaipata 1.

²Euchlornis frontalis squamipectus Chapman: Similar to E. f. frontalis, but with decidedly larger (wider) bill; adult male with top and sides of the head antique green, much darker than the bright grass-green back, instead of concolorous with the latter; scarlet throat area less extensive; sides of body more definitely barred with green; female with more yellow about the forehead, and entire under parts, from bill to tail coverts, yellow regularly barred or lunulated with dark green (instead of the upper throat being bright yellow, tinged with scarlet, and the breast uniform dark green). Wing (male) 88, (female) 83; tail 62, (female) 54; bill 11-12.

Material examined.—Ecuador: near Macas I; Zamora (the type) I, Pindo I.

³The small grayish horn-color bill, the white apical markings to the tertials, the scarlet jugular spot, and the absence of the blackish lateral border to the orange yellow pectoral area distinguish this rather aberrant species from the large- and orange-billed section (*E. lubomirskii, jucunda, pulchra*). Its nearest relative is perhaps *E. sclateri* which is, however, much smaller and quite differently colored in the male sex.

'Material examined.—Venezuela: La Cumbre de Valencia 42; Las Quiguas 5; Lagunita de Aroa, Lara 3.

Euchlornis formosa rubidior Chapman. TURUMIQUIRE FRUIT-EATER.

Euchlornis formosa rubidior Chapman, Amer. Mus. Novit., 191, p. 10, 1925
—La Trinidad, near Carapas, Mount Turumiquire, Venezuela.

Pipreola formosa (not of HARTLAUB) SCLATER and SALVIN, P.Z.S.Lond., 1868, pp. 168, 172—near Caripé; SCLATER, Ibis, 1878, p. 168—part, descr. et hab. Caripé; idem, Cat. B. Brit. Mus., 14, p. 378, 1888—part, spec. a,b, Caripé.

Range: Subtropical Zone of northeastern Venezuela, in states of Sucre and Monagas (Caripé; Los Palmales; Santa Ana Valley; La Trinidad, near Carapas; Mount Turumiquire).

*Euchlornis sclateri Cornalia.2 Sclater's Fruit-Eater.

Euchlornis sclateri Cornalia, Contrib. Ornith., 1852, p. 133, pl. 101, 1852—
"Peru" (errore); Quijos, Ecuador, to be regarded as type locality; idem,
Rev. Mag. Zool., (2), 5, p. 107, pl. 4, 1853—"Bolivia" (errore).

Euchlornis sclateri pallidigula ZIMMER, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 60, 1924—Huachipa, upper Huallaga River, dept. Huánuco, Peru.

Pipreola sclateri Sclater, P.Z.S.Lond., 22, p. 113, 1854—Quijos, Ecuador (crit.); Salvin, Ibis, 1874, p. 324—Archidona, Ecuador; Sclater, l.c., 1878, p. 170—eastern Ecuador (monog.); idem and Salvin, P.Z.S.Lond., 1880, p. 155—Sarayacu, Ecuador; Sclater, Cat. B. Brit. Mus., 14, p. 379, 1888—Sarayacu and Río Napo, Ecuador; Allen, Bull. Amer. Mus. N.H., 2, p. 74, 1889—Río Napo.

Euchlornis sclateri sclateri Chapman, Bull. Amer. Mus. N.H., 55, p. 549, 1926—Río Suno and below San José, Ecuador.

Range: Tropical Zone of eastern Ecuador (Quijos; Archidona; Sarayacu; Río Suno; Río Napo; below San José) and Peru (Huachipa and Pozuzo, dept. Huánuco; Río Perené, dept. Junín).³

2: Peru (Huachipa 2).

¹Euchlornis formosa rubidior Chapman: Similar to E. f. formosa, but white markings on tertials much more restricted, being only about half as wide; remiges, except the four outer primaries, distinctly, though narrowly, margined with white apically; chest spot of male generally less (not more, as stated by Chapman) suffused with orange; female with throat yellowish, spotted or barred with dusky greenish (instead of wholly green or very nearly so). Wing 87-90, (female) 87-89; tail 65-68; bill 11-12.

Material examined.—Venezuela: Santa Ana Valley 1; Los Palmales 3; mountains inland of Cumaná 3.

²The small size, the parti-colored bill, and the deep green abdomen, sharply defined against the red chest, distinguish this species from the rest of the genus.

*Examination of additional material in the collections at London and Tring shows E. s. pallidigula to have been based on individual rather than geographic variation. Birds from Pozuzo (Huánuco) and Perené (Junín) are, so far as coloration is concerned, nowise different from a series of Ecuadorian skins. The only point of distinction that seems to hold is the slightly shorter wing. Five Peruvian

123

Euchlornis whitelyi (Salvin and Godman). WHITELY'S FRUIT-EATER.

Pipreola whitelyi Salvin and Godman, Ibis, (5), 2, p. 449, 1884-Roraima (descr. of female); SALVIN, l.c., 1885, p. 304-Roraima; idem. l,c., 1886, pp. 500, 502, pl. 12 (male, female)—Mount Twek-quay; Sclater, Cat. B. Brit. Mus., 14, p. 381, 1888-Roraima and Mount Twek-quey.

Euchlornis whitelyi CHUBB, Birds Brit. Guiana, 2, p. 296, 1921-Mount Twek-quey and Roraima.

Range: Mountains of British Guiana (Roraima and Twek-quey, alt. 3000 to 6000 feet).

*Euchlornis arcuata (Lafresnaye). ARCUATE FRUIT-EATER.

Ampelis arcuata LAFRESNAYE, Rev. Zool., 3, p. 98, 1843—"Colombie" = Bogotá; idem, Mag. Zool., (2), 5, cl. 2, pl. 40 (=male), 1843—Colombia; HARTLAUB, Rev. Mag. Zool., (2), 1, p. 494, 1849—Colombia; Schater and SALVIN, P.Z.S.Lond., 1879, p. 618-Tilotilo, Bolivia.

- Ampelioides tschudii HELLMAYR, Verh. Orn. Ges. Bay., 13, p. 110, 1917—Peru, Ecuador, and Colombia (crit., plumages); Chapman, Bull. Amer.

¹No racial variation is noticeable in a large series from throughout the range. Material examined.—Venezuela: Culata 3, El Valle 4, "Mérida" 3.—Colombia: Bogotá 7.—Ecuador: above Gualea 4, Mindo 4, Intac 2, near Quito 3, Baeza 2.—Peru: Maraynioc 1.—Bolivia: Cocapata, dept. La Paz 9.

Mus. Nat. Hist., 55, p. 548, 1926—Gualea, Salvias, Las Piñas, Zamora, below Río Sardinas, and near Macas, Ecuador.

Stictornis cinctus Chapman, Bull. Amer. Mus. N.H., 36, p. 498, 1917—Las Lomitas, San Antonio, and Cocal (Western Andes), Andalucía (Eastern Andes), Colombia.

Range: Subtropical Zone of Colombia, Ecuador, and Peru (south to Junín).¹

2: Peru (Huachipa, dept. Huánuco 1); Colombia (Bogotá 1).

Genus IODOPLEURA Lesson.

- Iodopleura Lesson, Rev. Zool., 2, p. 45, 1839—type by orig. desig. Pardalotus pipra Lesson.
- Heliophilus (not of Meigen, 1803) Descourtilz, Orn. Brés., livr. 2, p. 22, circa 1854—type by monotypy Heliophilus taunaysii Descourtilz = Pardalotus pipra Lesson.
- *Iodopleura pipra pipra (Lesson). Lesson's Chatterer.
 - Pardalotus pipra Lesson, Cent. Zool., p. 81, pl. 26, 1831—"à Trinquemalé sur la côte de Ceylan," coll. Reynaud—errore, we suggest Rio de Janeiro.
 - Euphone aurora Sundevall, Vetenskaps-Akad. Handl. for 1833, p. 312, pl. 11, fig. 5, 1834—Brazil; Gyldenstolpe, Ark. Zool., 19, A, No. 1, p. 71, 1926 (crit.).
 - Heliophilus taunaysii Descourtilz, Orn. Brés., livr. 2, p. 22, pl. 24, fig. 1, circa 1854—Brazil (habits).
 - Iodopleura pipra Des Murs, Icon. Ornith., livr. 12, pl. 71, fig. 2, 1849; Burmeister, Syst. Übers. Th. Bras., 3, p. 465, 1856—"Lagôa Santa, Minas Geraes"; Cabanis, Journ. Orn., 22, p. 89, 1874—Cantagallo, Rio; Sclater, Cat. B. Brit. Mus., 14, p. 392, 1888—"Novo" Friburgo, Rio; Hartert, Katalog Vogels. Senckenb. Mus., p. 106, 1892—"São Paulo"; Ihering, Rev. Mus. Paul., 3, p. 217, 1899—São Paulo (ex Hartert); idem, l.c., 4, p. 157, 1900—Cantagallo and Nova Friburgo, Rio; idem, Cat. Faun. Braz. 1, p. 315, 1907—range; Hellmayr, Verh. Orn. Ges. Bay., 12, p. 139, 1915—Braço do Sul, near Victoria, Espirito Santo.

Range: Wooded region of southeastern Brazil, in states of Espirito Santo and Rio de Janeiro (Nova Friburgo, Cantagallo).²

1: Brazil ("Rio" skin 1).

¹Birds from Colombia (Bogotá) average slightly larger than those from more southern localities, but do not differ in coloration. Immature birds have the greater upper wing coverts tipped with yellow, preceded by a black subapical spot.

Material examined.—Colombia: Bogotá 4.—Ecuador: Santo Domingo 3, above Gualea 4, Río Napo 1.—Peru: Huachipa 1.

²Its occurrence in São Paulo is still to be confirmed, and Burmeister's record from Lagôa Santa also appears somewhat questionable in view of the fact that the Danish collectors failed to find it in Minas Geraes (see Reinhardt, Vidensk. Medd. Naturhist. Foren., 1870, p. 321). Four (out of ten) Rio specimens have

Iodopleura pipra leucopygia Salvin. WHITE-RUMPED CHATTERER.

Iodopleura leucopygia Salvin, Ibis, (5), 3, p. 305, 1885-British Guiana (types in British Museum examined); SCLATER, Cat. B. Brit. Mus., 14, p. 393, pl. 26, 1888-British Guiana; CHUBB, Birds Brit, Guiana, 2, p. 304, 1921-British Guiana.

Iodopleura pipra (not of LESSON) CABANIS in SCHOMBURGK, Reisen Brit. Guiana, 3, p. 697, 1848—Demerara, British Guiana.

Range: British Guiana.

Iodopleura fusca (Vieillot).2 Dusky Chatterer.

Ampelis fusca VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 162, 1817 -"Brésil," errore, hab. subst. Cayenne (auct. Berlepsch, 1908).

Pipra laplacei Eydoux and Gervais, Mag. Zool., 6, cl. 2, pl. 68, 1836-"Guyane"; idem, Voyage Favorite, 5, (2), p. 41, pl. 16, 1839—"Guyane."

Iodopleura fusca Salvin, Ibis, 1885, p. 305-Bartica Grove, British Guiana; SCLATER, Cat. B. Brit. Mus., 14, p. 393, 1888—Bartica Grove, Cayenne, Demerara; Berlepsch, Nov. Zool., 15, p. 143, 1908—Cayenne; Penard and PENARD, Vog. Guyana, 2, p. 171, 1910—interior of Surinam; CHUBB, Birds Brit. Guiana, 2, p. 305, 1921-Makauria River, Demerara, Bartica Grove.

Range: French, Dutch, and British Guiana.

*Iodopleura isabellae Parzudaki. ISABELLA'S CHATTERER.

traces of a white uropygial band, which is altogether absent in the others. Wing 57-60, (female) 56.

Material examined.—Rio de Janeiro (trade skins) 10, Cantagallo 1, Braço do Sul, Espirito Santo 1.

¹Iodopleura pipra leucopygia SALVIN: Similar to I. p. pipra, but slightly smaller; rump with a well-defined white cross-band (from 5 to 6 mm. wide); throat paler, light ochraceous salmon rather than fawn color; sooty edges on under parts decidedly narrower; lower tail coverts likewise paler. Wing (two unsexed adults) 54, 56; tail 30; bill 7.

The types (and only known specimens) are trade skins of the characteristic "Demerara" preparation.

²I. fusca is very nearly allied to, and agrees with, the better known I. isabellae in large size (wing 73-78; tail 38-42), heavy bill, extensive white uropygial area, and lack of salmon color on throat and under tail coverts. It may, however, be distinguished by blackish slate (instead of fuscous or fuscous black) upper parts; absence of white markings on lores, cheeks, and postocular region; more blackish sides of the head; plain fuscous throat, sides of breast, and belly, the flanks being but slightly suffused with white. As in *I. isabellae* the silky tuft on the sides of the breast is violet in the male, white in the female.

While probably subspecifically related one to another, I. fusca and I. isabellae are doubtless specifically different from I. pipra.

Material examined.—British Guiana: Bartica Grove 2, Macauria Creek I, Demerara 3.

Vieillot's description, though none too good, can hardly apply to another species of the present genus.

'Iodopleura guttata Lesson (Rev. Zool., 2, p. 45, 1839—''le Sénégal?'') may be an earlier name, though the passage ''thorax, flanc et ventre grisâtre avec croissans bruns'' hardly fits the present species. The type is obviously lost.

Iodopleurus isabellae Parzudaki, Rev. Zool., 10, p. 186, 1847—Río Negro, "in Venezuela," coll. Thirion (type now in Paris Museum).

Iodopleura isabellae DES MURS, Icon. Ornith., livr. 12, text to pl. 71, fig. 1, 1849; SCLATER, P.Z.S.Lond., 25, p. 266, 1857-Rio Javarri and Rio Tocantins; Sclater and Salvin, l.c., 1867, p. 579-Rio Tocantins; idem, l.c., 1867, pp. 751, 758-Xeberos, Peru; idem, l.c., 1873, p. 285-Xeberos, Chamicuros, Rio Javarri; Pelzeln, Orn. N.H., 55, p. 552, 1926-Napo, Ecuador and Barrigon, near Villavicencio, Colombia; STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928-Pinheiro, Pará.

Iodopleura emiliae Des Murs, Icon. Ornith., livr. 12, pl. 71, fig. 1, 1849—figure of type.

Range: Northern Brazil (Marajó Island; Pará; Rio Tocantins; Rio Vaupé; Rio Solimões; Rio Purús); eastern Peru, north through eastern Ecuador to eastern Colombia (Villavicencio).

1: Peru (Yurimaguas 1).

Genus CALYPTURA Swainson.

Calyptura Swainson in Richardson, Faun. Bor.-Amer., 2, p. 491, Feb., 1832—type by orig. desig. Pardalotus cristatus Vieillot.

Calyptura cristata (Vieillot). SHORT-TAILED CHATTERER.

Pardalotus cristatus VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 24, p. 528, 1818—"Brésil, coll. Delalande, jr." = Rio de Janeiro (type in Paris Museum examined).

Pipra tyranulus (sic) WAGLER, Isis, 1830, p. 940—new name for Pardalotus cristatus VIEILLOT.

Calyptura cristata Swainson, Ornith. Draw., Part 2, pl. 24, 1834; Burmeister, Syst. Übers. Th. Bras., 2, p. 448, 1856—Nova Friburgo, Rio; Cabanis, Journ. Orn., 22, p. 89, 1874—Cantagallo, Rio; Sclater, Cat. B. Brit. Mus., 14, p. 394, 1888—"Novo" Friburgo; Ihering, Rev. Mus. Paul., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 315, 1907—Nova Friburgo, Rio.

¹Material examined.—Brazil: Pará 1; Benevides, Pará 4; Marajó 1; Rio Tocantins 1; Rio Vaupé 5; Arimã, Rio Purús 5; Tonantins, Rio Solimões 1.—Colombia: "Bogotá" 2.—Ecuador: Río Copotaza 1.—Peru: Yurimaguas 1; Chamicuros 2; Xeberos 2.

Pardalotus coronatus Descourtilz, Orn. Brés., p. 22, pl. 24, fig. 2, circa 1854 —Brazil (habits).

Range: Wooded region of southeastern Brazil, in state of Rio de Janeiro (Cantagallo, Nova Friburgo).¹

Genus ATTILA Lesson.2

Attila Lesson, Traité d'Orn., livr. 5, p. 360, end of 1830—type by monotypy Attila brasiliensis Lesson = Muscicapa spadicea Gmelin.

Dasycephala Swainson, Faun. Bor.-Amer., 2, p. 486, Feb., 1832—type by subs. desig. (Gray, Cat. Gen. Subgen. Birds, p. 41, 1855) Tyrannus rufescens Swainson = Muscicapa spadicea Gmelin.

Dasyopsis Reichenbach, Av. Syst. Nat., pl. 66, 1850—type by subs. desig. (Sclater, Cat. B. Brit. Mus., 14, p. 358, 1888) Attila brasiliensis Lesson = Muscicapa spadicea Gmelin.

*Attila spadiceus spadiceus (Gmelin). POLYMORPHIC ATTILA.

Muscicapa spadicea GMELIN, Syst. Nat., 1, (2), p. 937, 1789—based on "Yellow-rumped Flycatcher" Latham, Gen. Syn. Birds, 2, (1), p. 354, Cayenne (type in Leverian, now in Vienna Museum examined; =rufous phase).

¹The range of this rare species is very imperfectly known, the only definite localities on record being Cantagallo and Nova Friburgo, in the hinterland of Rio de Janeiro.

Material examined.—Nova Friburgo 1: Rio (trade skins) 6.

²This genus should probably be included among the Tyrannidae.

³Attila spadiceus spadiceus (GMELIN) offers an almost unique example of polymorphic variation or mutation. Not less than twelve names have been proposed for the various types of coloration, which, in the light of nearly one hundred specimens from the Guianan-Amazonian subregion, prove to be merely phases of a single taxonomic unit. The principal stages may be characterized as follows:

- (a) Upper parts decidedly green, varying from dull olive citrine to serpentine green; rump clear yellow; wing bands rather indistinct, varying from buffy olive to dark olive buff and buffy citrine; secondaries scarcely edged with dull brownish exteriorly; tail dusky, frequently with a rusty cast; throat and chest citrine of different shades, more or less variegated with grayish or yellowish streaks; belly white, anteriorly streaked with gray; flanks and under tail coverts more or less tinged with lemon yellow or pale greenish yellow; under wing coverts pale greenish yellow. This is the variation described as A. brasiliensis, A. viridescens, A. wighti, and A. neoxenus.
- (b) The green of the head, throat, and chest is replaced by gray, and this color also invades, to a varying degree, the dorsal plumage, while the yellowish of the flanks and under wing coverts inclines to a paler tint. This is the stage described as A. spodiostethus.
- (c) Upper parts brown, varying through every imaginable shade from medal bronze to deep raw umber; wing bands decidedly rufescent, tawny olive to cinnamomeous; tertials and edges of secondaries brown or rufous brown like the back; rump buffy or primuline yellow; tail distinctly rufescent; throat and chest without any green or yellow, being dull gray, streaked with brown; flanks, under tail and wing coverts tinged with buffy or ochraceous. Specimens of this color-type were named D. uropygialis.
- (d) The entire plumage is invaded by a rufous pigment; the upper parts, including the inner secondaries, deep cinnamon or Prout's brown; the wing bars and the tail tawny; the rump buffy yellow to ochraceous tawny; the sides of the

Tyrannus rufescens Swainson, Quart. Journ. Sci., Litt., Arts Roy. Inst., 20, No. 40, p. 278, Jan., 1826—locality unknown (=rufous phase).

Attila brasiliensis Lesson, Traité d'Orn., livr. 5, p. 360, end of 1830—"Brésil," errore (the type examined in the Paris Museum is from Cayenne; = green phase); Lafresnaye, Rev. Zool., 11, pp. 40, 45, 1848—Cayenne (descr. of type); Pucheran, Arch. Mus. Hist. Nat. Paris, 7, livr. 3, p. 366, 1855 (type stated to be from Cayenne, not from Brazil); Salvin, Ibis, 1885, p. 303—Bartica Grove and Camacusa, Brit. Guiana (spec. examined); Hellmayr, Nov. Zool., 13, p. 328, 1906—Cayenne and British Guiana (note on type; variation; descr. of immature plumage); Berlepsch, l.c., 15, p. 141, 1908—Roche-Marie, French Guiana (crit.); Penard and Penard, Vog. Guyana, 2, p. 162, 1910—Surinam; Snethlage, Bol. Mus. Goeldi, 8, p. 352, 1914—Benevides, Rio Tocantins (Cametá, Alcobaça), Cussary, Monte Alegre, Brazil; Beebe, Zoologica (N.Y.), 2, p. 94, 1916—Utinga, Pará (habits and song descr.).

head and the ventral surface tawny, paler on the abdomen; under wing coverts ochraceous buff or tawny ochraceous. This mutant was described as Muscicapa

spadicea and Attila rufigularis.

As long ago as 1906, I had called attention to the surprising variation exhibited by a series from British Guiana and eastern Venezuela, and four years later I even cast doubts on the specific distinctness of A. brasiliensis and A. spadiceus. More recently, E. Stresemann insisted on the mutational nature of this variability, and the careful study of ample material in the present connection fully corroborates his contention.

"Pure-blooded" specimens of the brasiliensis type, characterized above under (a), are relatively rare in comparison with the large number of individuals which, by one or more characters, connect them with (b) or (c). To illustrate these facts, we will consider an exceptionally instructive series of twenty-four skins from the lower Tapajóz (Santarém; Diamantina; Colonia do Mojuy; Itaituba; Villa Braga; Miritituba; Apagy), kindly forwarded by Mr. W. E. Clyde Todd, of the Carnegie Museum, Pittsburgh. Five specimens, including the type of A. viridescens in the U. S. National Museum, may be termed typical "brasiliensis," though there is some slight variation in the shade of the green parts, in the amount of yellowish streaking on the throat, as well as in the width and coloring of the wing bands. In three others, the upper parts are tinged with orange citrine; the rump deeper, more primuline yellow; the tail and inner secondaries more rufescent; the flanks buffy yellow, etc. They mark a decided step in the direction of "uropygialis," particularly a female from Santarém (Carnegie Museum, No. 72442), which resembles certain individuals of this "phase" also in the coloring of the throat and chest. Eight additional specimens may be classed as "uropygialis." They are distinctly brown above, although not two are of exactly the same shade. The lightest-backed is hardly different from the preceding variety, while the darkest (Carnegie Museum, No. 72811), in its deep raw umber dorsal surface, closely approaches the "spadiceus" plumage. The majority of these birds lack any yellow or greenish tints on the anterior lower parts, the throat and chest being dull gray, distinctly or obscurely streaked with brownish olive; others, by their more citrine, yellowish-streaked throats, form the transition to the "brasiliensis" stage. An adult from Apaçy (Carnegie Museum, No. 77759) represents the "spadiostethus" plumage, having the head clear gray all round, the throat feathers laterally edged with whitish, and just a faint greenish shad

The series fully bears out Stresemann's statement that, as far as the upper parts are concerned, an unbroken line can be constructed from the green, brownDasycephala uropygialis Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 686, 1848—British Guiana (type in Berlin Museum examined; =immature of the brown-backed phase with grayish, brown-streaked anterior under parts).

Attila spadiceus Lafresnaye, Rev. Zool., 11, p. 46, 1848—Cayenne; Sclater, P.Z.S.Lond., 27, p. 41, 1859—Cayenne; idem, Cat. Coll. Amer. Birds, p. 195, 1862—Cayenne; Pelzeln, Orn. Bras., 2, p. 96, 1868—Barra do Rio Negro = Manáos (spec. in Vienna Museum examined); Sclater, Cat. B. Brit. Mus., 14, p. 362, 1888—part, spec. e-g, Iquitos (Peru) and Cayenne; Berlepsch, Nov. Zool., 15, p. 142, 1908—Cayenne; Snethlage, Journ. Orn., 56, p. 506, 1908—Itaituba, Rio Tapajóz (spec. examined); Penard and Penard, Vog. Guyana, 2, p. 163, 1910—Surinam; Snethlage, Bol. Mus. Goeldi, 8, p. 352, 1914—Providencia, Rio Tapajóz (Santarém, Itaituba), and Obidos; Stresemann, Journ. Orn., 73, p. 274, 1925 (crit., variation).

Attila rufigularis Pelzeln, Orn. Bras., 2, pp. 96, 170, Sept., 1868—Salto do Girão, Rio Madeira (type in Vienna Museum examined; =rufous phase); idem, Ibis, 1873, p. 113; IHERING, Cat. Faun. Braz., 1, p. 311, 1907—"Matto Grosso" (ex Pelzeln); Snethlage, Bol. Mus. Goeldi, 8, p. 353, 1914—Rio Madeira (ex Pelzeln).

tailed "brasiliensis" to the rufous "spadiceus" stage, while, seen from below, the latter seems to be separated by a wide gap. Still, a specimen from Tamanoir, French Guiana (Carnegie Museum, No. 62415) is decidedly intermediate, having the anterior under parts much less tawny, suffused with yellow; the flanks extensively yellow; and the middle of the belly very pale buff (between cartridge buff and cream buff).

The juvenile plumage exhibits much variation in the streaking below, the general tone of coloring, and the rufescence of the tail. The majority of the young birds examined by us correspond to the brown-backed "uropygialis" phase, while only two are of the "spadiceus" type. Neither the green nor the grayheaded variety is represented in the series, which seems to indicate that the "brasiliensis" and "spadiostethus" mutants constitute an advanced stage of

comparatively recent development.

As to geographic variation, I have not been able to make out any local races. Birds from Amazonia (Pará to the Peruvian border) appear to be inseparable from a Guianan series, and almost every combination of color-characters may be found in any locality, whence a sufficient number of specimens is available. Bolivian examples are not different either, so far as I can see. The type of A. neoxenus and an adult female from the Río Surutú are ordinary specimens of the "brasiliensis" phase, and can be matched by various individuals in the series from French Guiana and the Tapajóz Valley. The type of A. arizelus, a brown-backed example with rufous tail, is very similar to others from Amazonia, particularly one from Santarém, while underneath it is more nearly like a bird from Nova Olinda, Rio Purás. A fourth skin from Bolivia (Río Surutú; Carnegie Museum, No. 79591) belongs to the "spodiostethus" phase with gray head and chest, and hardly any yellowish on the flanks, but with the back medal bronze (instead of green) and the tail conspicuously rufescent. With the scanty material at hand it is hardly possible to dispose of the Caribbean form, described as A. wighti from a single specimen secured on the Heights of Aripo, Trinidad. In coloration, the type cannot be distinguished from average specimens of the "brasiliensis" variety from French Guiana and Amazonia, but is slightly larger. Three adults from the opposite Venezuelan mainland (Cristóbal Colón), however, do not differ in size from the general run of Guianan birds, with which they also agree in coloration. All of them belong to the intermediate type, showing an approach to "uropygialis" in the coloring of the dorsal parts, but average more rufous on the tail. An adult male from El Hacha, Bolívar Railroad, state of Lara, is closely similar to the type

Attila uropygialis Pelzeln, Orn. Bras., 2, p. 96, 1868-Salto do Girão, Rio Madeira (spec. examined); SALVIN, Ibis, 1885, p. 304-Bartica Grove, Brit. Guiana; SCLATER, Cat. B. Brit. Attila uropygiata IHERING and IHERING, Cat. Faun. Braz., 1, p. 310, 1907
—Rio, Espirito Santo, and Bahia.

Attila spadicea uropygiata Stresemann, Journ. Orn., 73, p. 277, 1925—eastern Brazil, north to Bahia.

Range: Wooded coast region of southeastern Brazil, in states of Bahia (Caravellas), Espirito Santo (Rio Doce), and Rio de Janeiro.

*Attila spadiceus parvirostris Allen.2 SMALL-BILLED ATTILA.

Attila parvirostris Allen, Bull. Amer. Mus. N.H., 13, p. 153, 1900—Minca, Santa Marta Region, Colombia (type in American Museum of Natural

¹Attila spadiceus uropygiatus (WIED): Similar in coloration to A. s. spadi-

ceus, but somewhat larger, with stronger, heavier bill.

The plumage of this form is just as variable as that of its Amazonian representative. Four of the nine specimens examined are in the "brasiliensis," four others in the "spadiceus" stage, while the remaining example is of the intermediate type. No gray-headed mutant (spodiostethus) appears to be on record from eastern Brazil. The smallest individuals are not certainly distinguishable from true spadiceus.

Wing of adults (unsexed).—Bahia: 88, 88, 89, 91, 92, 93, 94, 97.—Rio

de Janeiro: 95.

²Attila spadiceus parvirostris Allen: Similar to A. s. spadiceus, but with larger bill, and in the rufous ("spadiceus") phase apparently not distinguishable by any other character; normal type of coloration much like the "uropygialis" variant, but upper parts brighter rufous brown (Sudan to amber brown), the pileum frequently duller, rarely dull citrine; throat and chest strongly washed with orange citrine and streaked with dusky, rarely flammulated with grayish, buffy citrine and whitish, or yellowish with dark citrine striations; grayish streaks on upper abdomen absent or barely suggested. Wing (male) 85-91, (female) 82-86; tail 70-73, (female) 66-70; bill 21-22.

with orange citrine and streaked with dusky, rarely flammulated with grayish, buffy citrine and whitish, or yellowish with dark citrine striations; grayish streaks on upper abdomen absent or barely suggested. Wing (male) 85-91, (female) 82-86; tail 70-73, (female) 66-70; bill 21-22.

There can be little doubt that A. rufipectus is merely the rufous phase of A. parvirostris. The type of A. r. confinis, an immature female, is somewhat darker throughout, but this variation is paralleled in the corresponding stage of A. s. spadicea. The Santa Marta series, while fairly constant in the coloration of the dorsal surface (which is much brighter rufous brown than in any specimen of the

History, New York, examined); TODD and CARRIKER, Ann. Carnegie Mus., 14, p. 329, 1922-Minca, Agua Dulce, Don Diego, and Trojas de Cataca, Santa Marta Region (crit.; spec. examined).

Tropical Zone of northern Colombia (Santa Marta re-Range: gion) and adjacent section of northwestern Venezuela (Orope, Río Zulia, and Guachi, state of Zulia).

Venezuela (Orope, Zulia 1).

Attila spadiceus caniceps Todd. GRAY-HEADED ATTILA.

Attila caniceps Todd, Proc. Biol. Soc. Wash., 30, p. 4, 1917-Jaraquiel, dept. Bolívar, Colombia (type in Carnegie Museum examined).

Amazonian form), presents the usual amount of variation below. Only one specimen (Carnegie Museum, No. 42208, Minca) recalls, by its grayish and buffy citrine streaks on throat and chest, certain individuals from Brazil. The majority have these parts strongly washed with orange citrine, differing thereby very markedly from A. s. spadiceus. The type of A. parvirostris, however, bridges the gap in this respect, being more yellowish on the throat and chest than any other

in the present series.

The type of A. idiotes, from Fundación, western base of the Santa Marta Mountains, differs by decidedly greenish (somewhat brighter than dull citrine) pileum; slightly lighter, less rufous back; and much brighter Picric yellow ground color of throat and chest. However, an adult male from Guachi, south of Lake Maracaibo, in the coloration of the crown and nape, is halfway between the Fundación bird and a male from Don Diego (Carnegie Museum, No. 44470), while the stronger yellowish suffusion in the orange citrine of the anterior under parts marks another step in the direction of A. idiotes. The type, on the dorsal surface, closely resembles specimens from Cristóbal Colón, Paría Peninsula, discussed under A. s. spadiceus, and for the present I am inclined to regard it as an extreme variant of A. s. parvirostris with which it agrees in proportions and shape of bill.

Material examined.—Venezuela, Zulia: Guachi I; Orope (type of A. r. confinis) I.—Colombia, Santa Marta region: Las Nubes (type of A. rufipectus) I; Don Diego 3; Minca (including the type of A. parvirostris) 5; Trojas de Cataca I; Fundación (type of A. idiotes) I.

Attila spadiceus caniceps Todd: Closely similar to A. s. sclateri, of eastern Panama, but pileum grayish (instead of greenish like the upper back); throat Attila citreopygus citreopygus (not Dasycephala citreopyga BONAPARTE) CHAP-MAN, Bull. Amer. Mus. N.H., 36, p. 495, 1917—part. Puerto Berrio. lower Magdalena, Colombia (spec. examined).

Attila brasiliensis sclateri (not of LAWRENCE) MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 12, 1925-part, Puerto Berrio.

Range: Northern Colombia (Puerto Berrio, lower Magdalena, dept. Antioquia; Jaraquiel, dept. Bolívar).

Attila spadiceus parambae Hartert. PACIFIC ATTILA.

Attila braziliensis parambae HARTERT, Bull. Brit. Orn. Cl., 11, p. 39, Dce., 1900-Paramba, prov. Esmeraldas, Ecuador (type in Tring Museum examined); idem, Nov. Zool., 9, p. 610, 1902-Paramba, San Javier, and Pambilar, Ecuador (spec. examined); CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 546, 1926-below Mindo, Ecuador.

Attila sclateri (not of LAWRENCE) SCLATER, Cat. B. Brit. Mus., 14, p. 361, 1888—part, spec. q, Ecuador; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 134, 1891-part, "eastern" Ecuador.

Attila fuscicauda Chapman, Bull. Amer. Mus. N.H., 31, p. 155, 1912-Gallera, Andes west of Popayán, Colombia.

Attila brasiliensis parambae CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 495, 1917-Gallera, Colombia; MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 12, 1925-western Ecuador and Colombia (crit.).

Attila spadicea parambae STRESEMANN, Journ. Orn., 73, p. 277, 1925 (range).

Range: Tropical Zone of western Ecuador and western Colombia, north to the upper Atrato (Quibdó).

and chest streaked with dull (grayish) white and dusky, the latter tinged with dull yellowish citrine. Wing (two males) 87; tail 71, 72; bill 22.

This form is exceedingly close to A. s. sclateri, but appears to be separable, as far as one can judge from two specimens. East Panama birds, as a rule have much more yellow on throat and chest, though an adult male from Loma del León (Museum of Comparative Zoology, No. 107265), viewed from below, is an exact duplicate of the Puerto Berrio example which, owing to its fresher plumage, is somewhat more brightly colored throughout than the worn type. On the upper parts, too, caniceps can be matched by various specimens of A. s. sclateri, although the latter generally has more brownish suffusion. The grayish pileum, however, separates the two Colombian birds from any in the series from eastern Panama. eastern Panama.

Material examined.—Colombia: Jaraquiel, dept. Bolívar (the type) 1; Puerto Berrio, lower Magdalena, dept. Antioquia 1.

¹Attila spadiceus parambae HARTERT: Nearest to A. s. sclateri, but pileum and back olive green, very rarely tinged with brownish on the lower back; rump lemon yellow (without any buff); tail darker, nearest to sepia; wing bands duller, varying from olive buff to buffy olive (instead of buckthorn brown); under parts similar, viz., throat and chest broadly streaked with yellow and citrine, and abdomen white, but sides and flanks greenish yellow, without any buff suffusion. Wing 87-93, (female) 82-86; tail 69-73, (female) 65-69; bill 21-23.

This form shows very little variation and does not seem to have a rufous phase, not infrequent in the eastern races A. s. spadiceus and A. s. parvirostris. Specimens from Pacific Colombia agree with the Ecuadorian ones.

Material examined.—Ecuador: below Mindo 2; Paramba (including the type) 2; Pambilar I; San Javier I.—Colombia: Juntas, Río Dagua I; Malagita, Chocó I; Quibdó, Río Atrato I.

Attila spadiceus sclateri Lawrence. 1 Sclater's Attila.

Attila brasiliensis sclateri MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 12, 1925—part, northwestern Colombia and eastern Panama (crit.).

Range: Eastern Panama, from the Canal Zone eastwards, and extreme northwestern Colombia (Río Salaqui).

*Attila spadiceus citreopygus (Bonaparte). CITRON-RUMPED ATTILA.

Dasycephala citreopyga Bonaparte, Compt. Rend. Ac. Sci. Paris, 38, p. 657, 1854—Nicaragua; idem, Not. Orn. Coll. Delattre, p. 86, 1854—Nicaragua.

Attila citreopygius (a) Sclater, P.Z.S.Lond., 27, p. 41, 1859—part, Nicaragua; idem, Ibis, 1859, p. 438—part, Nicaragua; Nutting, Proc. U.S.Nat. Mus., 6, "1883," p. 385, 1884—Sucuyá, Nicaragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 133, 1891—part, Costa Rica and Chiriquí;

¹Attila spadiceus sclateri Lawrence: Most nearly related to A. s. citreopygus, but pileum and back olive instead of brown, and blackish streaks restricted to anterior part of crown. Wing 86-91, (female) 82-87; tail 69-74, (female) 67-71; bill 21-25.

While the majority from eastern Panama have much less brown above, the predominating color of pileum and back being olive or dark citrine, there occur certain specimens which, by the Dresden brown tone of the back, are hardly distinguishable from the dullest extreme of A. s. citreopygus, as represented in a series from Costa Rica. On the other hand, birds from Darién (Río Tuyra; Mount Sapo) and a single adult male from the Río Salaqui, in extreme northwestern Colombia, closely approach A. s. parambae, from which they mainly differ by the ochreous tinge on rump and flanks.

Material examined.—Panama: Lion Hill (Loma del León) 9; Frijole, Panama Railroad 1; San Pablo, Isthmus of Panama 1; Tapalisa 1; El Real, Río Tuyra 1;

Mount Sapo, Darién 1.-Colombia: Río Salaqui I.

- Attila brasiliensis citreopygus MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 13, 1925—Pacific side of Canal Zone to Nicaragua (crit.).
- Range: Nicaragua, Costa Rica, and western Panama (Chiriquí and Veraguas).1
- 9: Nicaragua (San Gerónimo, Chinandega 1, San Emilio, Lake Nicaragua 1, Matagalpa 1); Costa Rica (Lagarto 1, Cabagre 1, Boca Río Matina 1, Siquirres 1, Orosi 1, unspecified 1).

¹Study of a very large series shows plainly that there is only one form of Attila in southern Central America. The "luteolus" type of coloration is not confined to any particular area, but occurs, along with ordinary individuals of citreopygus and intermediates, both on the Caribbean and Pacific slope of Costa Rica. A small series from Nicaragua exhibits the same variation. The type of A. tephrocephala is merely a gray-headed variant, corresponding to the "spodiostethus" phase of the Amazonian A. s. spadiceus. It is approached, in one respect or another, by several specimens in the Costa Rican series. Birds from western Panama (Chiriquí), as a whole, agree very well with those from more northern localities,

*Attila spadiceus flammulatus Lafresnaye. Flammulated Attila.

- Attila flammulatus Lafresnaye, Rev. Zool., 11, p. 47, 1848—"Colombia," errore; Vera Cruz, Mexico, substituted by Bangs and Penard, 1922 (type in Museum of Comparative Zoology, Cambridge, examined).
- Attila hypoxanthus Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 135, 1891—part, type from Vera Paz, Guatemala (=xanthochroic variant).
- Attila mexicanus Nelson,² Proc. Biol. Soc. Wash., 14, p. 172, 1901—Frontera, Tabasco (type in U.S.National Museum examined).
- Attila citreopyga salvini RIDGWAY, Proc. Biol. Soc. Wash., 19, p. 118, 1906—Pasa Nueva, Vera Cruz (type in U.S.National Museum examined); idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 807, 1907—southeastern Mexico, Guatemala, Honduras, and British Honduras (monog.); Dearborn, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 100, 1907—Los Amates, San José, Patulul, and Mazatenango, Guatemala; Peters, Auk, 30, p. 375, 1913—north of Bacalar and Camp Mengel, Quintana Roo.
- Attila citreopygia(us) (not Dasycephala citreopyga Bonaparte) Sclater, P.Z.S.Lond., 25, p. 228, 1857—Santecomapám, Vera Cruz; idem, l.c., 27, p. 41, 1859—part, southern Mexico and Guatemala; idem, l.c., p. 366, 1859—Jalapa; idem, l.c., p. 383, 1859—Playa Vicente, Vera Cruz; Sclater and Salvin, Ibis, 1859, p. 120—Guatemala; Sclater, l.c., p. 438—part, southern Mexico and Guatemala; Sumichrast, Mem. Bost. Soc. N.H., 1, p. 536, 1869—Vera Cruz; Sclater and Salvin, P.Z.S.Lond., 1870, p. 837—Honduras; Lawrence, Bull. U.S.Nat. Mus., 4, p. 25, 1876—Santa

though one adult male from Boquete can hardly be told from sclateri of the Canal Zone. A single adult male from Veraguas (Natá, Coclé) is difficult to place, but for geographic reasons I refer it to citreopygus rather than to sclateri.

A. s. citreopygus is a rather variable race, and while generally smaller and more olivaceous, less brownish on the head, is sometimes barely distinguishable from A. s. flammulatus.

Material examined.—Nicaragua: Sucuyá I; Los Sábalos I; Escondido River 2; San Gerónimo, Chinandega I; Matagalpa I; San Emilio, Lake Nicaragua I.—Costa Rica: Pacuaré I; Jiménez I; Boca Río Matina I; Siquirres I; Orosi I; El Hogar 2; La Hondura 2; Carrillo 4; Guayabo 3; Bonilla I; Coliblanco I; La Vijagua I; Cariblanco de Sarapiquí I; "Talamanca" (type of A. tephrocephala) I; San José (type of A. citropyga luteola) I; Guaitil I; Lagarto I; Cabagre I; Bebedero I; Miravelles I; Bolson 3; Tenorio I; Pozo Azul de Pirris I; Pozo del Río Grande 3; Boruca 2; El General I.—Panama: Almirante Bay I; Divala 2; Boquete 5; El Banco, Chiriquí I; Chiriquí I; Natá, Coclé I.

¹A. hypoxanthus is merely a "xanthochroic" phase, without any white on the under parts which are continuously clear yellow, with, however, the usual dusky streaks on throat and chest, and ochraceous sides. It is not peculiar to any particular area, but represents a purely individual variant. Specimens in this plumage have been examined from Mazatlán, Sinaloa (A. s. pacificus), eastern Guatemala (A. s. flammulatus), Costa Rica (A. s. citreopygus), and even French Guiana (A. s. spadiceus)!

²The type (and only available specimen from Tabasco) has the lower throat and chest streaked with tawny brown rather than dusky or citrine, and the ochraceous tawny color of the sides and flanks more extensive than any other specimen. Still I am inclined to attribute these divergencies to individual variation, since birds from Guatemala and Honduras are inseparable from typical flammulatus, as represented by a series from Vera Cruz, Puebla, and Chiapas, and the existence of a distinct form in Tabasco seems hardly possible.

Efigenia, Oaxaca; Sclater, Cat. B. Brit. Mus., 14, p. 361, 1888-part, spec. a, d-j, Jalapa, Choctum, Kamkhal, and Vera Paz, Guatemala; SAL-VIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 133, 1891-part, Jalapa, Santa Efigenia, and Guatemala; LANTZ, Trans. Kansas Ac. Sci., 16, p. 221, 1899-Naranjo, Guatemala; BANGS, Bull. Mus. Comp. Zool., 39, p. 149, 1903-Ceiba, Honduras.

Attila citreopygus mexicanus RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 810, 1907—Frontera, Tabasco (monog.).

Attila citreopygus gaumeri (not of SALVIN and GODMAN) RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 811, 1907—part, coast of British Honduras (near Manatee Lagoon).

Attila flammulatus flammulatus BANGS and PENARD, Proc. Biol. Soc. Wash., 35, pp. 223, 224, 1922-Vera Cruz and Puebla, south to Honduras (crit.; note on type).

Attila brasiliensis flammulatus MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 13, 1925—southeastern Mexico to Honduras (crit.).

Range: Southeastern Mexico, in states of Vera Cruz, Puebla, Oaxaca (Tehuantepec), Tabasco, Chiapas, and southern Quintana Roo, and southward through Guatemala and British Honduras to Salvador and Honduras.1

7: Mexico (Santa Efigenia, Tehuantepec, Oaxaca 1); Guatemala (Los Amates, Izabal I, San José, Escuintla I, Patulul, Sololá I, Mazatenango 2): Honduras (San Pedro Sula 1).

¹The type of A. flammulatus, supposed to be from "Colombia," proves to be identical with A. c. salvini, and aside from its somewhat faded under parts and "foxy" back, agrees perfectly with specimens from Vera Cruz in eastern Mexico. Birds from Guatemala (Pacific and Caribbean slopes) and Honduras appear to be inseparable from those of eastern Mexico, though they possibly average slightly deeper, more rufous brown on the upper parts. Three adults from Tehuantepec (Cacoprieto and Santa Efigenia) likewise belong here. The majority of the examples from British Honduras cannot be distinguished from the general run of flammulatus, though one (out of three) from Manatee Lagoon and another from San flammulatus, though one (out of three) from Manatee Lagoon and another from San Felipe, Upper Belize River, are more olivaceous above. However, they can be matched in this respect by various skins from other localities (Jalapa, Vera Cruz, and Honduras). Two adults from southern Quintana Roo, by smaller size and reduction of greenish suffusion on foreneck, form the transition to A. s. gaumeri, of Yucatán. A small series from Salvador is rather puzzling. They are much paler and more cinnamomeous above, and have light ochraceous-tawny tails, more like A. s. pacificus, but resemble A. s. flammulatus in their bright yellow (instead of ochraceous) rump. It is quite possible that additional material may show them to be senarable may show them to be separable.

Material examined. - Mexico: Vera Cruz, Pasa Nueva (including the type of A. c. salvini) 3, Buenavista 2, Jalapa 1; Metlaltoyuca, Puebla 1; Palenque, Chia-A. c. salvini) 3, Buenavista 2, Jalapa 1; Metlaltoyuca, Puebla 1; Palenque, Chiapas 1; Frontera, Tabasco (type of A. mexicanus) 1; Cacoprieto, Tehuantepec, Oaxaca 1; Santa Efigenia, Tehuantepec, Oaxaca 2; Camp Mengel, Quintana Roo 1; twenty miles north of Bacalar, Quintana Roo 1.—Guatemala: Vera Paz 1; pine forests of Choctum 3; Savanna Grande 1; Los Amates, Izabal 1; Escuintla 1; San José, Escuintla 1; Mazatenango 2; Patulul, Sololá 1.—Salvador: Lake Olomega 4; Río San Miguel 1; Hacienda Miraflores, dept. La Paz 2; Hacienda Chilata, dept. Sonsonate 3.—British Honduras: Toledo District 4; San Felipe, Upper Belize River 1; Manatee Lagoon 4.—Honduras: Ceiba 1; Chamelecón 3;

Santa Ana I; San Pedro Sula 2.

Range: Cozumel Island, off Yucatán.

1: Cozumel Island.

Attila spadiceus pacificus nom nov.3 LAWRENCE'S ATTILA.

Attila cinnamomeus (not Muscicapa cinnamomea GMELIN) LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 10, p. 8, 1871-Mazatlán, Sinaloa (types in U.S.

¹Attila spadiceus gaumeri Salvin and Godman: Very close to A. s. flammulatus, but smaller, with proportionately larger bill; upper parts on average paler; throat and chest streaked with grayish instead of with dusky, and barely, if at all, tinged with pale sulphur yellowish. Wing 89-92, (female) 83-87; tail 73-81, (female) 68-74; bill 24-26. Material examined.—Yucatán: Puerto Morelos 2; Chichen-Itza 1; unspecified 1.

²Attila spadiceus cozumelae RIDGWAY: Very similar to A. s. gaumeri, particularly below, but rump ochraceous tawny (instead of yellow ocher), and sides, axillaries, and under wing coverts deeper, cinnamon buff or ochraceous buff (instead of yellowish buff or buff yellow). Wing 89-92, (female) 81-88; tail 72-76, (female) 62-73; bill 24-26.

Material examined.—Cozumel Island 9.

Attila spadiceus pacificus HELLMAYR: Nearly allied to A. s. flammulatus, but upper parts much lighter and more cinnamomeous (tawny brown or ochraNational Museum examined); idem, Mem. Bost. Soc. N.H., 2, p. 285, 1874—Mazatlán (habits); Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 135, 1891—Santiago (Tepic), Beltran, Hacienda de San Marcos, and Tonilá (Jalisco), Santiago (Colima), Omiteme, Amula, and Rincón (Guerrero), and Juchatengo and Sola (Oaxaca); Miller, Bull. Amer. Mus. N.H., 21, p. 356, 1905—Sierra de Juan de Lisiarraga, Sinaloa.

Attila hypoxanthus Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 135, 1891—part, spec. from Venta de Pelegrino, Guerrero (=xanthochroic variant).

Attila citreopygus cinnamomeus RIDGWAY, Bull. U.S. Nat. Mus., 50, Part 4, p. 809, 1907—Pacific slope of Mexico (monog.).

Attila flammulatus cinnamomeus BANGS and PENARD, Proc. Biol. Soc. Wash., 35, p. 224, 1922—Pacific slope of Mexico.

Attila brasiliensis cinnamomeus MILLER and GRISCOM, Amer. Mus. Novit., 183, p. 13, 1925—Pacific slope of Mexico (crit.).

Range: Pacific slope of Mexico, in states of Sinaloa, Nayarit, Jalisco, Colima, Guerrero, and western Oaxaca.

*Attila bolivianus bolivianus Lafresnaye. Bolivian Attila.

Tyrannus rufescens (not of Swainson, 1826) Lafresnaye and D'Orbigny, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 44, 1837—Guarayos, Bolivia (types in Paris Museum examined); D'Orbigny, Voyage Amér. Mérid., Ois., p. 308, 1839—Guarayos, Moxos, and Chiquitos, Bolivia.

Attila bolivianus Lafresnaye, Rev. Zool., 11, p. 46, 1848—new name for Tyrannus rufescens Lafresnaye and D'Orbieny, preoccupied; Hellmayr, Verh. Zool. Bot. Ges. Wien, 52, p. 97, 1902 (crit., synon.); idem, Nov. Zool., 13, p. 330, 1906—Guarayos, Bolivia (crit.); Ihering and Ihering, Cat. Faun. Braz., 1, p. 310, 1907—part, Bolivia and Matto Grosso; Snethlage, Journ. Orn., 56, p. 13, 1908—Cachoeira, Rio Purús (spec. examined); idem, Bol. Mus. Goeldi, 8, p. 353, 1914—Cachoeira, Rio Purús.

Attila validus Pelzeln, Orn. Bras., 2, pp. 96, 169, 1868—Villa Maria [=São Luiz de Caceres], Engenho do Gama, and [Villa Bella de] Matto Grosso, Matto Grosso (spec. in Vienna Museum examined); Sclater, Cat. B. Brit. Mus., 14, p. 364, 1888—Matto Grosso and Bolivia; Allen, Bull. Amer. Mus. N.H., 5, p. 110, 1893—Chapada, Matto Grosso.

Attila bolivianus bolivianus HELLMAYR, Nov. Zool., 17, p. 316, 1910 (range, crit.); idem, l.c., 32, p. 21, 1925—Guarayos, Bolivia, Matto Grosso, and Sarayacu, Río Ucayali, Peru (crit.).

ceous brown), even the pileum often cinnamomeous like the back; rump and tail coverts ochraceous or yellow ocher; tail uniform ochraceous tawny, without any brownish or dusky shade; foreneck and chest very slightly, if at all, tinged with sulphur yellow; sides and flanks as a rule deeper ochraceous tawny.

This well-marked race had to be renamed, since Lawrence's specific term turned out to be preoccupied in the genus by Muscicapa cinnamomea Gmelin, an earlier name for Attila thamnophiloides (Spix).

Material examined.—Sinaloa: "Mazatlán" (the types) 2.—Jalisco: San Sebastián 2.—Guerrero: Omilteme 1; Acahuizotla 1; Egido Nuevo 1; Coquillo 1; Coyuca 1; Papayo 6.

Range: Southwestern Brazil, in state of Matto Grosso (Chapada; Descalvados; São Luiz de Caceres; Engenho do Gama and Villa Bella de Matto Grosso, Rio Guaporé), and lowlands of eastern Bolivia (Chiquitos; Moxos; Guarayos; mouth of Río San Antonio, Río Espirito Santo; Buenavista, dept. Santa Cruz), north to the upper Purús (Cachoeira) and Sarayacu, Río Ucayali, eastern Peru.¹

1: Bolivia (Buenavista, dept. Santa Cruz 1).

Attila bolivianus nattereri Hellmayr.2 Natterer's Attila.

Attila nattereri Hellmayr, Verh. Zool. Bot. Ges. Wien, 52, p. 95, 1902—Borba, Rio Madeira (type) and Pará, Brazil; Ihering and Ihering, Cat. Faun. Braz., 1, p. 311, 1907 (range); Snethlage, Journ. Orn., 61, p. 526, 1913—Monte Alegre (Cussary?) and Faro; idem, Bol. Mus. Goeldi, 8, p. 353, 1914—Monte Alegre and Faro (Rio Jamundá).

Attila bolivianus (not of LAFRESNAYE) PELZELN, Orn. Bras., 2, p. 96, 1868—Borba and Pará (spec. examined); IHERING and IHERING, Cat. Faun. Braz., 1, p. 310, 1907—part, Borba and Pará.

Attila bolivianus nattereri HELLMAYR, Nov. Zool., 17, pp. 315, 316, 1910—Borba, Rio Madeira (range); idem, Abhandl. Bayr. Ak. Wiss., Mathphys. Kl., 26, No. 2, p. 91, 1912—Pará.

Range: Northern Brazil, on the banks of the lower Amazon, from Pará to Borba, Rio Madeira.

*Attila rufus (Vieillot). GRAY-THROATED ATTILA.

Muscicapa cinerea (not of P. L. S. MÜLLER, 1776) GMELIN, Syst. Nat., 1, (2), p. 933, 1789—based on "Le Gobe-mouche roux, de Cayenne" BRISSON, Orn., 6, Suppl., p. 51, pl. 3, fig. 3, 1760, Cayenne (errore); SPIX, Av. Bras., 2, p. 19, pl. 26, fig. 2, 1825—"in sylvis Brasiliae" (spec. in Munich Museum examined); WIED, Beitr. Naturg. Bras., 3, (2), p. 853, 1831—southeastern Brazil.

Birds from Bolivia (bolivianus) and Matto Grosso (validus) agree well together, although the latter are on average slightly paler above, with the pileum somewhat more grayish. A single specimen from the Rio Purús (Cachoeira) resembles those from Matto Grosso, whereas a male from Sarayacu, Peru, in its brownish head, is more like the types from Guarayos.

Material examined.—Brazil: Descalvados I; Villa Bella de Matto Grosso 3; Engenho do Gama, Rio Guaporé I; São Luiz de Caceres 5; Cachoeira, Rio Purús I.—Bolivia: Guarayos (the types) 3; mouth of Río San Antonio, Río Espirito Santo I; Buenavista I.—Peru: Sarayacu, Ucayali I.

²Attila bolivianus nattereri Hellmayr: Similar to A. b. bolivianus, but smaller and much darker throughout; pileum sepia rather than Dresden brown; sides of the head cinnamon brown rather than buckthorn brown; back and margins to rectrices much more deeply colored and more olivaceous, less cinnamomeous; rump, tail, and under parts much deeper rufous. Wing 91-93 (against 94-100, in A. b. bolivianus); tail 76-81; bill 23-25.

Material examined.—Brazil: Pará 1; "Monte Alegre", lower Amazon 2; Borba, Rio Madeira (the types) 2.

Tyrannus rufus Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 35, p. 87, 1819—"le Brésil, d'où il a été apporté par M. Delalande fils" = Rio de Janeiro (types in Paris Museum examined).

Attila griscigularis BERLEPSCH, Ibis, (5), 3, p. 290, 1885—"Santa Catharina, Brazil (?)" (type in Berlepsch Collection examined); Holt, Bull. Amer. Mus. N.H., 57, p. 310, 1928—Serra do Itatiaya.

Tyrannus cinereus Swainson, Quart. Journ. Sci., Litt., and Arts Roy. Inst., 20, No. 40, p. 278, Jan., 1826—Brazil.

Attila rufus LAFRESNAYE, Rev. Zool., 11, p. 46, 1848-Brazil.

Dasycephala cinerea Burmeister, Syst. Übers. Th. Bras., 3, p. 85, 1856—Brazil; Cabanis, Journ. Orn., 22, p. 86, 1874—Cantagallo, Rio.

Attila cinereus Sclater, P.Z.S.Lond., 27, p. 41, 1859—southern Brazil; Pelzeln, Orn. Bras., 2, p. 95, 1868—Sapitiba, Registo do Sai, Rio de Janeiro, Mattodentro and Ypanemá, São Paulo, and Paranaguá, Paraná (spec. examined); Sclater, Cat. B. Brit. Mus., 14, p. 363, 1888—Bahia and São Paulo, Brazil; Ihering, Rev. Mus. Paul., 3, p. 214, 1899—part, Iguapé, São Paulo; idem, l.c., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio; Euler, l.c., p. 54, 1900—Brazil (nest and eggs descr.); Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 651, 1906—southeastern Brazil (variation, crit.); Ihering and Ihering, Cat. Faun. Braz., 1, p. 310, 1907—Cachoeira, Iguapé, Ubatuba (São Paulo), Porto Cachoeiro (Espirito Santo), Bahia and Joinville (Santa Catharina); Lima, Rev. Mus. Paul., 12, (2), p. 100, 1920—Ilhéos to Belmonte, southern Bahia; Miranda Ribeiro, Arch. Mus. Nac. Rio de Janeiro, 24, p. 254, 1923—Monte-Serrat, Itatiaya; Pinto-Peixoto, l.c., p. 262, 1923—Itatiaya.

Attila cinerea PELZELN, Nunq. Otios., 2, p. 291, 1874-Nova Friburgo, Rio.

Range: Wooded region of southeastern Brazil, from southern Bahia to Santa Catharina.²

2: Brazil (Bahia 1; Rio de Janeiro 1).

¹Examination of the types (Nos. 3843-44, of the mounted bird collection) shows the description to be inaccurate in several respects, the back being amber brown (passing into ochraceous tawny on the rump) and by no means "brun verdâtre," while the central rectrices do not differ in color from the lateral ones. In other words, they agree in every way with specimens from Rio de Janeiro and São Paulo, which the adult bird (No. 3844) further resembles in having the entire throat and foreneck whitish gray, streaked with dusky.

²Birds from Rio de Janeiro (including the types) and São Paulo agree very well together, the throat and foreneck being grayish white, streaked with dusky, and the remainder of the under parts nearly uniform tawny, the abdomen but little paler than the breast. The type of A. griseigularis, purchased from a dealer and said to be from "Santa Catharina," merely differs by having the middle of the belly much paler, almost lemon yellow. In this respect, it is closely matched by an adult male from Paranaguá, Paraná, and in my revision of Spix's types (Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 652, 1906) I have, accordingly, proposed to separate the birds from extreme southern Brazil under Berlepsch's term. However, an adult from Joinville, Santa Catharina, examined since does not bear out this difference, and seems to be indistinguishable from Rio examples. Bahia skins, which Count Berlepsch, when describing A. griseigularis, took for

Attila citriniventris Sclater. 1 CITRON-BELLIED ATTILA.

Attila citriniventris Sclater, P.Z.S.Lond., 27, p. 40, 1859—Río Ucayali, eastern Peru; Pelzeln, Orn. Bras., 2, p. 96, 1868—Rio Vaupé, Brazil (spec. examined); Taczanowski, Orn. Pér., 2, p. 371, 1884—part, descrof type only, Peru; Sclater, Cat. B. Brit. Mus., 14, p. 363, 1888—upper Peruvian Amazon; Berlepsch, Journ. Orn., 37, p. 303, 1889—Shanusi, near Yurimaguas, Peru (spec. examined).

Range: Upper Amazonia, in eastern Ecuador, northeastern Peru (Río Ucayali; Shanusi, near Yurimaguas, lower Huallaga), and northwestern Brazil (Rio Vaupé, an affluent of the upper Rio Negro).

Attila phoenicurus Pelzeln.² Rufous-tailed Attila.

Attila phoenicurus (NATTERER MS.) PELZELN, Orn. Bras., 2, pp. 96, 171, Sept., 1868—banks of the Rio Parahyba near Mattodentro (São Paulo), Curytiba (Paraná), Goyaz, and [Villa Bella de] Matto Grosso (Matto Grosso); I select Mattodentro as type locality (spec. in Vienna Museum examined); HELLMAYR, Verh. Zool. Bot. Ges. Wien, 52, p. 97, 1902 (crit.); IHERING, Rev. Mus. Paul., 6, p. 350, March, 1905—Ubatuba, São Paulo (spec. examined); idem, Cat. Faun. Braz., 1, p. 311, 1907—Ubatuba.

typical cinereus, have the grayish gular area restricted to the chin and upper throat, and were it not for a Rio specimen, which is practically identical, I would not hesitate to discriminate a northern race. More satisfactory and properly labeled material is required in order to determine any possible local forms.

Material examined.—Bahia (trade skins) 5.—Rio de Janeiro (including the types) 8; Sapitiba, Rio 2; Registo do Sai, Rio 1; Ipanemá, São Paulo 1; Iguapé, São Paulo 1; Paranaguá, Paraná 1; Joinville, Santa Catharina 1; "Santa Catharina (?)" (type of A. griseigularis) 1.

¹Attila citriniventris SCLATER: Nearest to Bahia specimens of A. rufus in having merely the chin and upper throat grayish white, and the pileum including the hind neck gray with dusky shaft-streaks; but much smaller, with differently shaped bill (shorter, wider at base, and more constricted apically); chest only tawny ochraceous; breast and abdomen medially yellow, tinged with ochraceous tawny along flanks and on under tail coverts. Wing (?ad., Yurimaguas) 82, (♂imm., Rio Vaupé) 85; tail 63, (Rio Vaupé) 72; bill 18½, (Rio Vaupé) 20.

The Rio Vaupé bird differs from the two others by reason of longer tail, darker (less yellowish) rump, more brownish pileum and sides of head, buffy whitish (instead of grayish) upper throat, and darker abdomen.

A little-known species of uncertain affinities, of which more material is much desired.

Material examined.—Peru: Shanusi, near Yurimaguas 1.—Ecuador: "Oriente" (unspecified) 1.—Brazil: Rio Vaupé 1.

²Attila phoenicurus PELZELN, a very distinct species, is immediately recognizable by the strongly defined grayish brown hood embracing the top and sides of the head, the chestnut cinnamon back, and the somewhat paler under parts. The bill, though variable in shape, is much shorter than in any other species, and leads to the allied genus Casiornis. Wing (five males) 91-95, (two females) 88, 92; tail 77-85; bill 17-19.

Material examined.—Goyaz City I; Villa Bella de Matto Grosso, Matto Grosso I; Curityba, Paraná 4; Mattodentro, São Paulo (type) I, all in the Vienna Museum; Ubatuba, São Paulo (Museu Paulista, No. 5475) I.

145

Range: Southern Brazil, in states of Matto Grosso (Villa Bella de Matto Grosso), Goyaz (Goyaz City), São Paulo (Mattodentro and Ubatuba), and Paraná (Curityba).

- *Attila cinnamomeus cinnamomeus (Gmelin). CINNAMOMEOUS ATTILA.

 - Attila thamnophiloides SCLATER, P.Z.S.Lond., 27, p. 41, 1859-interior of Brazil; idem and Salvin, l.c., 1866, p. 187—Sarayacu, Peru; idem, l.c., 1867, p. 577-Mexiana; idem l.c., 1873, p. 285-Sarayacu, Peru (crit.); PELZELN, Orn. Bras., 2, p. 96, 1868—Borba, Rio Madeira, and Cayenne (spec. examined); LAYARD, Ibis, 1873, p. 385—Pará; TACZANOWSKI, Orn. Pér., 2, p. 372, 1884-Sarayacu, Peru; SALVIN, Ibis, 1885, p. 304-British Guiana (ex Schomburgk); Sclater, Cat. B. Brit. Mus., 14, p. 364, 1888 -Demerara, Cayenne, Mexiana, Elvira, Samiria, Sarayacu, Ucayali; GOELDI, Ibis, 1897, p. 161-Amapá, northern Pará; HELLMAYR, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 651, 1906—note on Spix's type (crit.); idem, Nov. Zool., 14, p. 13, 1907-Itaituba, Rio Tapajóz; idem, l.c., 14, p. 364, 1907—Borba, Rio Madeira; IHERING and IHERING, Cat. Faun. Braz., 1, p. 311, 1907—range; SNETHLAGE, Journ. Orn., 55, p. 291, 1907

Although the type, formerly in the Leverian Museum, appears to be lost, Latham's description fits Attila thamnophiloides in every detail except for the statement that the wing coverts are tipped with yellow, which may be due to a pen-slip or to the faded condition of the specimen. It will be noticed that Latham places it next to the "Yellow-rumped Flycatcher" [= Attila s. spadiceus,] for which he gives as patria "Inhabits Cayenne, with the last" [= Cinnamon Flycatcher], the two only species of Attila known to occur in French Guiana.

Mus. Comp. Zool., 62, p. 71, 1918vicinity of Paramaribo and Javaweg, Surinam; Chubb, Birds Brit. Guiana, 2, p. 289, 1921-Ituribisi River, Supenaam, Mazaruni River, Bartica, Bonasika River, Abary River, Anarika River; SNETHLAGE, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 64, 1926—Tury-assú, Maranhão; STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928-Rio Inhangapy, Pará.

Attila thamnophiloides thamnophiloides Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 344, 1929—Tury-assú, Maranhão.

Range: French, Dutch, and British Guiana, and the whole valley of the Amazon, including its tributaries, from northern Maranhão (Tury-assú) west to northeastern Peru (Elvira and Samiria, Río Marañón; Sarayacu, Ucayali; Lagunas, lower Huallaga).

3: Dutch Guiana (vicinity of Paramaribo 1); Brazil (Turyassú, Maranhão 1); Peru (Lagunas, lower Huallaga 1).

Attila cinnamomeus torridus Sclater.2 Fraser's Attila.

Attila torridus Sclater, P.Z.S.Lond., 28, p. 280, 1860—Babahoyo, Ecuador; Sclater and Salvin, l.c., 1878, p. 139—Santa Rosa, Ecuador; Taczanowski, Orn. Pér., 2, p. 372, 1884—Babahoyo; Sclater, Cat. B. Brit. Mus., 14, p. 365, 1888—Babahoyo, San Lucas, and Santa Rita, Ecuador; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—Vinces and Río Peripa; Hartert, Nov. Zool., 9, p. 611, 1902—San Javier and Pambílar, prov. Esmeraldas (spec. examined); Chapman, Bull. Amer. Mus. N.H., 55, p. 546, 1926—Esmeraldas, Manaví, Daule, La Chonta, and Alamor, Ecuador.

Range: Tropical Zone of western Ecuador, from Esmeraldas to Loja (Alamor).

Genus CASIORNIS Des Murs.

Casiornis (Bonaparte MS.) Des Murs in Castelnau, Exp. Amér. Sud, Ois., p. 55, June, 1856—type by monotypy Casiornis typus Des Murs.

¹Examination of thirty-nine specimens from Guiana and Amazonia fails to reveal any geographic variation. Peruvian birds, by paler rump and posterior under parts, form the transition to A. c. torridus.

²Attila c. torridus differs from the typical race by much lighter coloration and blacker wing coverts, with much narrower, paler apical margins.

Material examined.—Ecuador, prov. Esmeraldas: Pambílar 3, San Javier 3.

- *Casiornis rufa (Vieillot). Rufous Casiornis.
 - Thamnophilus rufus VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 3, p. 316, 1816—based on "Batara roxo" AZARA, No. 218 [= No. 217 in Walckenaer-Sonnini's French edition], Paraguay.

 - Casiornis rufus CHUBB, Ibis, 1910, p. 606-Sapucay, Paraguay.

Casiornis rufus rufus Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 23, p. 322, 1912—San Rafael, Paraguay.

Casiornis rufa SNETHLAGE, Journ. Ornith., 61, p. 526, 1913—Monte Alegre; idem, Bol. Mus. Goeldi, 8, p. 354, 1914—Monte Alegre, lower Amazon; Wetmore, Bull. U.S.Nat. Mus., 133, p. 294, 1926—Las Palmas, Chaco, and west of Puerto Pinasco and eastern bank of Río Paraguay, Paraguay; Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 344, 1929—Barra do Corda, Maranhão.

Range: Northern Argentina (Chaco, Salta, and Jujuy); Paraguay; eastern Bolivia, and the interior of the Brazilian table-land, from northern São Paulo and Matto Grosso through western Minas Geraes and Goyaz north to Maranhão (Barra do Corda) and Lower Amazonia (Monte Alegre).

19: Argentina, prov. Jujuy (Río Lavallen 1, Ledesma 1); Bolivia (Buenavista, dept. Santa Cruz 4); Brazil (Baurú, São Paulo 3; Chapada 2, Urucúm de Corumbá 2, Piraputanga, Matto Grosso 3; Barra do Corda, Maranhão 3).

*Casiornis fusca Sclater and Salvin. Dusky Casiornis.

Casiornis fusca Sclater and Salvin, Nomencl. Av. Neotrop., pp. 57, 159, 1873—Bahia (type in British Museum examined); Sclater, Cat. B. Brit. Mus., 14, p. 366, 1888—Bahia; Ihering and Ihering, Cat. Faun. Braz., 1, p. 312, 1907—Bahia; Snethlage, Journ. Orn., 55, p. 291, 1907—Pará, Santo Antonio do Prata; idem, Bol. Mus. Goeldi, 8, p. 354, 1914—Pará, Santo Antonio do Prata, Rio Tocantins (Arumatheua), Rio Xingú (Victoria), and Rio Tapajóz (Boim); Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, pp. 70, 154, 1910, 1925—Pão de Canôa and Santa Rita, Rio Preto, Bahia, and Lagôa Missão, near Parnaguá, and above Pintados, Rio Parnahyba, Piauhy; Snethlage, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, pp. 44, 64, 1926—Ceará and Maranhão (Anil, São Bento); Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928—Rio Muraiteua, Pará; Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 344, 1929—Maranhão, Piauhy, and Ceará.

Casiornis rufa fusca Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 91, 1912—Pará, Santo Antonio do Prata, state of Pará.

Range: Northeastern Brazil, in states of Bahia, Ceará, Piauhy, Maranhão, and Pará, extending along the south bank of the Amazon as far west as the Tapajóz (Boim).²

¹Birds from Jujuy and Bolivia are generally somewhat paler on the belly, but the difference is trifling and not quite constant. No material is available from the type locality. Forty-five specimens examined.

²Although representing its ally in the greater part of its range, C. fusca cannot well be treated as a subspecies of C. rufa, since both are known to occur on

13: Brazil (Juá, near Iguatú, Ceará 8; Ibiapaba, Piauhy 3; Fazenda Inhuma, Alto Parnahyba, Maranhão 1; São Bento, Maranhão 1.

Genus LANIOCERA Lesson.1

- Laniocera Lesson, Rev. Zool., 3, p. 353, 1840—type by monotypy Laniocera sanguinaria Lesson = Ampelis hypopyrrha Vieillot.
- Aulea (SCHIFF MS.) BONAPARTE, Ateneo Italiano, 2, No. 11, p. 314 (=Consp. Voluc. Anisod., p. 4), 1854—type by subs. desig. (GRAY, Cat Gen. Subgen. Birds, p. 56, 1855) Ampelis hypopyrrha VIEILLOT.
- Aulia Cabanis and Heine, Mus. Hein., 2, p. 101, 1859—emendation of Aulea Bonaparte.

*Laniocera hypopyrrha (Vieillot). CINEREOUS MOURNER.

- Ampelis hypopyrra (sic) VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 164, 1817—"la Guyane" = Cayenne.
- Ampelis hypopyrrha Vieillot, Tabl. Enc. Méth., Orn., 2, livr. 91, p. 762, 1822—Cayenne.
- Muscicapa sibilatrix Wied, Beitr. Naturg. Bras., 3, (2), p. 810, 1831—forest road of Capitão Filisberto, near Ilhéos, southern Bahia.
- Laniocera sanguinaria Lesson, Rev. Zool., 3, p. 353, 1840—hab. ign. (descr. juv.).
- Lipangus hypopyrrhus Hartlaub, Rev. Zool., 9, p. 3, 1846 (descr. juv.); idem, l.c., p. 111, 1846 (crit.).
- Ptilochloris hypopyrrhus LAFRESNAYE, Rev. Zool., 9, pp. 43, 239, 1846 (crit.).

Bras., 2, p. 123, 1868—Bahia; Salvin, Ibis, 1885, p. 303—Bartica Grove and Camacusa, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 354, 1888—Bahia, Bartica Grove, Camacusa, Chyavetas and Santa Cruz (Peru), Sarayacu (Ecuador); Allen, Bull. Amer. Mus. N.H., 2, p. 239, 1889—note on Wied's types in American Museum of Natural History, New York; Snethlage, Journ. Orn., 55, p. 291, 1907—Pará; Penard and Penard, Vog. Guyana, 2, p. 158, 1910—interior of Surinam.

the lower Amazon, while recently the latter species was discovered even at Barra do Corda, in the heart of the area occupied by C. fusca in the state of Maranhão.

Material examined.—Bahia (including the type) 3; Rio Preto, Bahia 4; Juá, Ceará 8; Ibiapaba, Piauhy 3; São Luiz 1, Miritiba 3, Fazenda Inhuma 1, São Bento, Maranhão 1; Benevides, Pará 1; Santarém, Rio Tapajóz 3.

¹In spite of its exaspidean tarsus and the extensive cohesion of the toes I cannot but feel that the affinities of this genus are with *Lipaugus* and *Rhytipterna*, and not with the Pipridae.

Lipaugus hypopyrrhus Sclater, P.Z.S.Lond., 1861, p. 211-Brazil, Amazonia, Nova Grenada: Sclater and Salvin, Exot. Orn., p. 6, 1866-southeastern Brazil.

Lipaugus lateralis Schater and Salvin, Exot. Orn., p. 6, 1866—Brazil sept. et Valle Amazonum; idem, P.Z.S.Lond., 1867, pp. 751, 757-Chyavetas, Peru; idem, l.c., 1873, p. 285-Chyavetas and Santa Cruz, Peru.

Aulia lateralis Pelzeln, Orn. Bras., 2, p. 124, 1868-Marabitanas, Rio Negro: Taczanowski, Orn. Pér., 2, p. 369, 1884—Chyavetas, Santa Cruz.

Laniocera hypopyrrha BERLEPSCH and HARTERT, Nov. Zool., 9, p. 57, 1902-Nericagua, Orinoco River, and Suapure, La Pricion, La Unión, and Nicare, Caura River, Venezuela; IHERING, Rev. Mus. Paul., 6, p. 435, 1905-Rio Juruá; idem, Cat. Faun. Braz., 1, p. 309, 1907-Rio Juruá (range); BERLEPSCH, Nov. Zool., 15, p. 141, 1908-Ipousin, R. Approuague, and Cayenne, French Guiana; SNETHLAGE, Journ. Orn., 56, p. 505, 1908-Itaituba, Rio Tapajóz; p. 529, 1908-Arumatheua, Rio Tocantins; idem, Bol. Mus. Goeldi, 8, p. 351, 1914-Pará, Apehú, Santo Antonio do Prata, Rio Tocantins (Arumatheua), Tamucury, Rio Tapajóz (Itaituba), Rio Jary (Santo Antonio da Cachoeira), Obidos; CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 250, 1916—Nericagua, Orinoco, and Caura Valley, Venezuela; BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 73, 1918-vicinity of Paramaribo, Lelydorp, and Javaweg, Surinam; LIMA, Rev. Mus. Paul., 12, (2), p. 100, 1920—Ilhéos to Belmonte, southern Bahia; CHUBB, Birds Brit. Guiana, 2, p. 281, 1921—numerous localities; CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 545, 1926—Sarayacu, Ecuador.

Laniocera hypopyrra Hellmayr, Nov. Zool., 13, p. 364, 1906-Santo Antonio do Prata, Pará; idem, l.c., 14, p. 364, 1907-Borba, Rio Madeira; idem, l.c., 17, p. 314, 1910-Calama, Rio Madeira; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 34, 90, 1912-Peixe-Boi, Pará (Pará localities); STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 169, 1928—Pará.

Range: French, Dutch, and British Guiana; southern Venezuela (Orinoco-Caura basin), and all over Amazonia, from Pará west to the eastern slopes of the Andes in Colombia ("Bogotá"), Ecuador (Sarayacu), and Peru (Chyavetas; Santa Cruz, Río Huallaga; Puerto Bermúdez, Ucayali drainage basin), and south to the Rio Madeira and northern Bolivia (Río San Mateo, Yungas of Cochabamba); also in eastern Brazil (southern Bahia).1

Peru (Puerto Bermúdez, Río Pichis, dept. Junín 1).

¹Specimens from Guiana and various parts of Amazonia agree well together. Birds from Bahia are slightly larger (wing 112-114, against 105-111 mm.) and apparently more tinged with olivaceous; but with only three old skins before me, I cannot be certain whether these rather trifling differences justify the recognition of a separate race, L. hypopyrrha sibilatrix (WIED).

Material examined.—French Guiana: Ipousin, Approuague River 1.—British Guiana: Bartica Grove 4, Camacusa 1, Caramang River 1.—Venezuela: Nericagua, Orinoco River 1; Caura Valley 20.—Colombia: "Bogotá" 3.—Brazil: Santo Antonio do Prata 1; Peixe-Boi, Pará 2; Borba, Rio Madeira 1; Calama, Rio Madeira 1; Marabitanas, Rio Negro 3; Bahia 3.—Peru: Puerto Bermúdez 1.—Bolivia: San Mateo 1.

*Laniocera rufescens rufescens (Sclater). Rufescent Mourner.

Lipaugus rufescens Sclater, P.Z.S.Lond., 25, "1857," p. 276, pub. Jan., 1858—Cobán, Guatemala¹ (type in Derby Museum, Liverpool); idem and Salvin, Ibis, 1859, p. 124—Cobán; Sclater, P.Z.S.Lond., 1861, p. 211—Guatemala; idem and Salvin, l.c., 1864, p. 361—Panama Railroad; idem, Exot. Orn., pp. 5, 6, pl. 3, 1866—Veragua and Panama; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 7, p. 330, 1862—Lion Hill, Panama; idem, l.c., 9, p. 116, 1868—Barranca and Tucurriquí, Costa Rica; Salvin, Ibis, 1866, p. 203—occurrence in Guatemala questioned; idem, P.Z.S.Lond., 1867, p. 149—Santa Fé, Veragua.

Aulia rufescens Sclater and Salvin, P.Z.S.Lond., 1879, p. 519—Remedios, Antioquía (?); Zeledón, An. Mus. Nac. Costa Rica, 1, p. 118, 1887—Pozo Azul de Pirris, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 355, 1888—Santa Fé, Chepo, Panama, and (?) Remedios, Colombia; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 130, 1891—Cobán, Honduras, Costa Rica, Panama, and (?) Colombia; Underwood, Ibis, 1896, p. 439—Volcán de Miravelles, Costa Rica.

Laniocerca rufescens RIDGWAY, Proc. U.S.Nat. Mus., 10, p. 589, 1888—Río Segovia, Honduras (crit.).

Laniocera rufescens RICHMOND, Proc. U.S.Nat. Mus., 16, p. 508, 1893—Río Escondido, Nicaragua (crit.); BANGS, Proc. New Engl. Zool. Cl., 2, p. 13, 1900—Loma del León, Panama; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 765, 1907—part, Guatemala to Panama and (?) Colombia (monog.); CARRIKER, Ann. Carnegie Mus., 6, p. 677, 1910—Cariblanco de Sarapiquí and La Vijagua, Costa Rica; BANGS and BARBOUR, Bull. Mus. Comp. Zool., 65, p. 215, 1922—Mount Sapo, Darién; GRISCOM, 1. c., 69, p. 181, 1929—El Real, Darién.

Range: Guatemala (Cobán, Vera Paz) and southward through Honduras (Río Segovia), Nicaragua (Río Escondido; San Emilio, Lake Nicaragua), and Costa Rica to Panama (Santa Fé de Veragua; Panama Railroad; El Real and Mount Sapo, Darién), and possibly northern Colombia (Remedios, Antioquia).²

3: Nicaragua (San Emilio, Lake Nicaragua 2); Costa Rica Reventazón 1).

Laniocera rufescens tertia (Hartert).3 ECUADORIAN RUFESCENT MOURNER.

¹Although the correctness of this locality given on the authority of Adolphe Delattre was subsequently questioned by Sclater and Salvin (Exot. Orn., p. 5), two more specimens from Guatemala have since come to hand.

²Owing to lack of material, I cannot say whether specimens from Colombia are really identical with those from Central America. According to the authors of the "Biologia" (l.c., p. 131), two birds from Remedios differ from the latter by having a grayish tinge on the head, lower back, and throat.

Material examined.—Honduras 1; Nicaragua 2; Costa Rica 7; Panama 1.

³Laniocera rufescens tertia (HARTERT): Adult male similar to L. r. rufescens, but general coloration decidedly darker, more tinged with chestnut, particularly above. Female unknown.

This rather ill-defined race needs corroboration by a larger series. Material examined.—Ecuador: Bulún, prov. Esmeraldas 4.

- Aulia tertia Hartert, Nov. Zool., 9, p. 609, 1902—Bulún, Ecuador (type in Tring Museum examined).
- Laniocera rufescens (not of SCLATER) RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 765, 1907—part, Ecuador.
- Laniocera rufescens tertia Chapman, Bull. Amer. Mus. N.H., 55, p. 545, 1926—Ecuador.

Range: Tropical Zone of northwestern Ecuador (Bulún, prov. Esmeraldas).

Genus RHYTIPTERNA Reichenbach.

Rhytipterna Reichenbach, Av. Syst. Nat., pl. 65, 1850—type by subs. desig. (GRAY, Cat. Gen. and Subgen. Birds, p. 49, 1855) Tyrannus calcaratus SWAINSON = Muscicapa simplex Lichtenstein.

*Rhytipterna simplex simplex (Lichtenstein). GRAYISH MOURNER.

- Muscicapa simplex Lichtenstein, Verz. Dubl. Berliner Mus., p. 53, 1823—Bahia, Brazil.

Lipaugus simplex simplex Chapman, Bull. Amer. Mus. N.H., 55, p. 545, 1926—eastern Ecuador.

Lipaugus simplex immundus (not of Sclater and Salvin) Berlepsch and Hartert, Nov. Zool., 9, p. 57, 1902—Perico and Nericagua, Río Orinoco, and Suapure and La Pricion, Caura, Venezuela.

¹Rhytipterna simplex frederici (BANGS and PENARD): Very similar to R. s. simplex, but upper parts decidedly darker, more purely slate gray; breast likewise darker; abdomen less tinged with yellowish; base of lower mandible hardly paler than the rest.

Although single specimens are not always distinguishable, this form is fairly separable in a series. Certain individuals from Pará and Maranhão form the

transition to R. s. simplex.

Material examined.—British Guiana 4.—Venezuela: Caura Valley 8.—Colombia: Bogotá 3.—Brazil: Tury-assú, Maranhão 1; Pará district 4; Itaituba, Tapajóz 1; Teffé, Rio Solimões 1; Rio Madeira 5; Engenho do Gama, Matto Grosso 1.

Lipaugus immundus CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 255, 1916 -La Cascabel, San Feliz River, Orinoco, Venezuela.

Lipangus simplex HELLMAYR, Nov. Zool., 12, p. 295, 1905—Igarapé-assú, Pará; idem, l.c., 13, p. 364, 1906—Santo Antonio do Prata, Pará; idem, l.c., 14, p. 13, 1907—Itaituba, Rio Tapajóz; idem, l.c., 14, p. 51, 1907— Teffé, Rio Solimões; idem, l.c., 14, p. 364, 1907—Borba, Rio Madeira; idem, l.c., 17, p. 314, 1910-Calama, Jamarysinho, and Maroins, Rio Madeira: idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 90, 1912-Pará localities; CHUBB, Birds Brit. Guiana, 2, p. 283, 1921-numerous localities.

Range: The Guianan-Amazonian forest region, from French, Dutch, and British Guiana west through southern Venezuela (valley of the Orinoco and its tributaries) to the eastern base of the Andes in Colombia and Ecuador, and throughout Amazonia from northern Maranhão to eastern Peru and western Matto Grosso (Villa Bella and Engenho do Gama, Rio Guaporé).

Colombia (Bogotá 1); Brazil (Tury-assú, Alto de Alegria, Maranhão 1).

Rhytipterna immunda (Sclater and Salvin). CAYENNE MOURNER.

Lipaugus immundus Sclater and Salvin, Nomencl. Av. Neotrop., pp. 57, 159, 1873—"Oyapoc, Cayenne" (types in British Museum examined); SCLATER, Cat. B. Brit. Mus., 14, p. 357, 1888-Oyapoc; Berlepsch, Nov. Zool., 15, p. 141, 1908—Oyapoc (ex Sclater and Salvin).

Range: Supposed to be French Guiana (Oyapock).

*Rhytipterna holerythra holerythra (Sclater and Salvin). Rufous MOURNER.

Lipaugus holerythrus Sclater and Salvin, P.Z.S.Lond., 28, p. 300, 1860— Choctum, Vera Paz, Guatemala; idem, Ibis, 1860, p. 400-Vera Paz,

¹Rhytipterna immunda (Sclater and Salvin) is known only from the two original specimens in the British Museum. One is an adult bird, just completing its annual molt, with the fourth to the eight primaries and the central pair of rectrices in the process of growing, and a number of pinfeathers in the body plumage. In coloration it is strikingly similar to *Myiarchus phaeonotus*, though the pileum is not quite so dark, being hardly different from the color of the back, and the throat and chest are somewhat dingier grayish (less whitish gray), also less sharply contrasted with the pale yellow of the remaining under parts. The second specimen is an immature bird in fresh plumage, without traces of molting. It has the smaller upper wing coverts conspicuously edged all round with buffly white while those of the greater series parely show external margins of buffy white, while those of the greater series merely show external margins of rufescent buff; the rectrices (except the outermost pair), too, are exteriorly edged with light cinnamon rufous, of which traces may likewise be seen on some of the upper tail coverts.

Both specimens differ, however, from Myiarchus phaeonotus by somewhat higher (not so depressed), less ridged and more strongly hooked bill, the serrated upper portion of the planta tarsi, and proportionately longer tail. Wing 86; tail 82, 85; tars. 20; bill 17, 18.

Its habitat, supposed to be Oyapock, is perhaps open to doubt.

Guatemala; SCLATER, P.Z.S.Lond., 1861, p. 211—Guatemala; idem and SALVIN, 1.c., 1864, p. 361—Panama Railroad; idem, 1.c., 1867, p. 279— Bluefields River, Nicaragua; idem, Exotic Orn., p. 6, 1866-Guatemala and Isthmus of Panama; LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 7, p. 330. 1862—Panama Railroad; idem. l.c., 9, p. 116, 1868—Angostura, Costa Rica; Salvin, P.Z.S.Lond., 1867, p. 149-Santa Fé de Veragua; idem, l.c., 1870, p. 199-Calovevora, Boqueti de Chitrá, Chitrá, and Volcán de Chiriquí; WYATT, Ibis, 1871, p. 334-one day's journey from Paturia, Magdalena Valley, Colombia; BOUCARD, P.Z.S.Lond., 1878, p. 65-San Carlos and Naranjo, Costa Rica; Sclater and Salvin, I.c., 1879, p. 519—Neche, Antioquia, Colombia; Zeledón, Anal. Mus. Nac. Costa Rica, I, p. 118, 1887—Talamanca, Las Trojas, Jiménez, and Naranjo de Cartago, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 357, 1888-"southern Mexico" to Remedios and Neche, northern Colombia; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 131, 1891—"Mexico" to Colombia; CHERRIE, Expl. Zool. en Costa Rica, 1890-91, p. 37, 1893-Boruca, Costa Rica; RICHMOND, Proc. U.S. Nat. Lipangus holerythrus BANGS, Proc. New Engl. Zool. Cl., 3, p. 40, 1902—Boquete and Volcán de Chiriquí, Panama.

Lipaugus holerythrus holerythrus Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 820, 1907—Guatemala to northern Colombia (monog.); Carriker, Ann. Carnegie Mus., 6, p. 669, 1910—Costa Rica; Chapman, Bull. Amer. Mus. N.H., 36, p. 495, 1917—Alto Bonito, lower Atrato, and Puerto Valdivia, lower Cauca, Colombia; Bangs and Barbour, Bull. Mus. Comp. Zool., 65, p. 213, 1922—Mount Sapo, Darién; Kennard and Peters, Proc. Boston Soc. N.H., 38, p. 458, 1928—Boquete Trail, Panama; Griscom, Bull. Mus. Comp. Zool., 69, p. 181, 1929—El Tigre, Río Cupe, Darién.

Range: Guatemala and southwards through Honduras, Nicaragua, Costa Rica, and Panama to northern Colombia (lower Atrato; Puerto Valdivia, lower Cauca; Nechí, Remedios, and near Paturia, lower Magdalena region).

6: Guatemala (Los Amates 1, unspecified 1); Costa Rica (Orosi 2, Boruca 1, Limón 1).

Rhytipterna holerythra rosenbergi (Hartert).² Rosenberg's Mourner.

¹Birds from northern Colombia (Río Nechí) and Darién diverge slightly in the direction of R. h. rosenbergi.

Material examined.—Guatemala 3; Chamelecón, Honduras 1; Costa Rica 10; Panama 2; Río Nechí, Colombia 2.

²Rhytipterna holerythra rosenbergi (HARTERT): Similar to R. h. holerythra, but much more deeply colored throughout, approaching cinnamon russet above and cinnamon chestnut underneath. Wing 97-104; tail 86-94; bill 19-20.

Material examined.—Colombia: Nóvita 2; Sipi 1; Juntas, Río Dagua 7.— Ecuador: Cachaví, prov. Esmeraldas 2.

Lipaugus holerythrus rosenbergi Hartert, Bull. Brit. Orn. Cl., 16, p. 12, 1905—Río Dagua, western Colombia (type in Tring Museum examined); Hellmayr, P.Z.S.Lond., 1911, p. 1145—Nóvita and Sipi, Chocó, Pacific Colombia (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 495, 1917—Los Cisneros, Río Dagua, Colombia; idem, l.c., 55, p. 546, 1926—western Ecuador.

Lipaugus holerythrus (not of Sclater and Salvin) Hartert, Nov. Zool., 5, p. 489, 1898—Cachabí, Ecuador.

Range: Pacific coast of Colombia, from the Río San Juan southwards, and northwestern Ecuador (prov. Esmeraldas).

Genus LIPAUGUS Boie.

Lipangus (typogr. error)¹ Boie, Isis, 21, p. 318, 1828—type by subs. desig. (Gray, List Gen. Birds, p. 29, 1840) Muscicapa plumbea Lichtenstein.

- Lathria cineracea cineracea Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 342, 1929—Tury-assú, Maranhão.

1020.

Range: French, Dutch, and British Guiana, and westward through southern Venezuela (the Orinoco Valley and its tributaries) to eastern Colombia, and south through the whole of Amazonia to northern Bolivia and western Matto Grosso, and from Pará along the wooded coast belt of eastern Brazil to southern Bahia.1

17: Dutch Guiana (near Paramaribo 2); British Guiana (Mazaruni River 2); Brazil (Serra Grande, Rio Branco 7; Conceição, Rio Branco 1: Utinga, Pará 1: Tury-assú, Maranhão 1): Peru (Moyobamba 1; Rioja 1; Puerto Bermúdez, Río Pichis, dept. Junín 1).

*Lipaugus lanioides (Lesson).2 CINNAMON-VENTED PIHA.

Turdampelis lanioides LESSON, Écho du Monde Savant, 11, 2nd sem., No. 7, p. 156, July, 1844—"Brésil"; idem, Oeuvr. Buffon, éd. Lévêque, 20, [= Descr. Mammif. et Ois.], p. 324, 1847—"Brésil."

Turdampelis rufococcix Lesson, Écho du Monde Savant, 11, 2nd sem., No. 7, p. 156, in text, 1844.

Turdampelis rufococcyx Lesson, Oeuvr. Buffon, éd. Lévêque, 20, [= Descr. Mammif. et Ois.], p. 325, in text, 1847.

Lipaugus virussu Pelzeln, Orn. Bras., 2, pp. 122, 184, Sept., 1868-Mattodentro and Ypanemá, São Paulo (types in Vienna Museum examined).

Lipangus lanioides HARTLAUB, Rev. Zool., 9, p. 3, 1846 (crit.).

¹I do not see my way clear to separate the southern race, Lipaugus cineraceus vociferans, lately revived by BANGS and PENARD (Bull. Mus. Comp. Zool., 62, p. 71, 1918). The wings of five (unsexed) skins from Bahia measure 119-125, of ten adult males from French and British Guiana 116-128; the variation in size is, therefore, about the same in the two series. Two of the Bahia skins are slightly washed with brownish on the apical portion of the rectrices and inner secondaries, which may indicate an approach to the large L. lanioides, of southern Brazil; but the remaining specimens are not distinguishable in coloration from the Guianan average. Bahia birds have possibly somewhat longer tails (111-117, against 109-113), though this insignificant difference is likely to disappear in a larger series.

While Peruvian specimens are not markedly different from those of Guiana and Venezuela, eight skins from San Mateo, Yungas of Cochabamba, Bolivia, may be separable subspecifically on account of their larger size (wing 128-133½; tail 116-122, once only 112) and slightly more olivaceous coloring. A single example from Sarayacu, Ecuador, however, is similar.

Material examined.—French Guiana 6.—British Guiana 6.—Dutch Guiana 3.—Venezuela: Caura Valley 15.—Colombia: "Bogotá" 3.—Ecuador: Sarayacu 1.—Brazil: Tury-assú, Maranhão 1; Pará district 10; Rio Madeira 3; Rio Branco 8; Engenho do Gama, Matto Grosso 1; Bahia 5.—Peru (as specified above) 3.—Bolivia: San Mateo, Yungas of Cochabamba 8.

²Lipaugus lanioides (LESSON) is most probably conspecific with L. cineraceus, but its range and variation are too little known to admit of a final conclusion. It differs from its ally principally in its larger size (wing 132-140; tail 115-122), decidedly brownish rump, tail, and wing edgings, and (buffy) brownish gray under parts, passing into cinnamomeous on the lower tail coverts.

Material examined.—Espirito Santo: Braço do Sul 1.—São Paulo: Victoria 2, Mattodentro I, Ipanemá 4.—Santa Catharina: Blumenau I, Joinville I.

- Lipaugus plumbeus (not Muscicapa plumbea, Lichtenstein) Sclater, P.Z.S. Lond., 1861, p. 210—Brazil (diag.; excl. synonymy); Sclater and Salvin, Exot. Orn., p. 6, 1866—Brazil.
- Lathria virussu Cabanis, Journ. Orn., 22, p. 90, 1874—Cantagallo, Rio; Sclater, Cat. B. Brit. Mus., 14, p. 351, 1888—Mattodentro and "Pelotas, Rio Grande do Sul," Brazil; Ihering, Rev. Mus. Paul., 3, p. 213, 1899—Cantagallo; idem, Cat. Faun. Braz., 1, p. 308, 1907—Iguapé, São Paulo and Marianna, Minas Geraes.
- Lathria lanioides HELLMAYR, Verh. Orn. Ges. Bay., 12, p. 138, 1915—Braço do Sul, near Victoria, Espirito Santo (crit.).

Range: Wooded region of southeastern Brazil, from Espirito Santo and southern Minas Geraes (Marianna) south to Santa Catharina.

2: Brazil (Victoria, São Paulo 1; Joinville, Santa Catharina 1).

Lipaugus streptophorus (Salvin and Godman). PINK-COLLARED PIHA.

Lathria streptophora Salvin and Godman, Ibis, (5), 2, p. 448, pl. 14, 1884—Roraima, British Guiana (descr. of male); Salvin, l.c., 1885, p. 303—Roraima; idem, l.c., 1886, pp. 500, 502—Mount Twekquay, Brit. Guiana (descr. of female); Sclater, Cat. B. Brit. Mus., 14, p. 352, 1888—Roraima and Twek-quey Mts.; Chubb, Birds Brit. Guiana, 2, p. 280, 1921—same localities.

Range: Mountains of British Guiana (Roraima, Twek-quey).

Lipaugus subalaris Sclater. GRAY-RUMPED PIHA.

- Lipaugus subalaris Sclater, P.Z.S.Lond., 1861, p. 210—Río Napo, Ecuador (type in British Museum examined); Sclater and Salvin, Exot. Orn., p. 36, pl. 2, 1866—Río Napo.
- Lathria subalaris Sclater, Cat. B. Brit. Mus., 14, p. 353, 1888—Río Napo and Sarayacu (Ecuador), "Upper Amazons"; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 15, 1899—San José, Ecuador; Chapman, Bull. Amer. Mus. N.H., 55, p. 544, 1926—Río Suno and below San José, Ecuador.

Range: Tropical Zone of eastern Ecuador (Río Napo, Sara-yacu, San José, Río Suno).²

*Lipaugus cryptolophus cryptolophus (Sclater and Salvin). OLIVA-CEOUS PIHA.

Lathria cryptolopha Sclater and Salvin, P.Z.S.Lond., 1877, p. 522—"Mongi" = Monji, eastern Ecuador (type in British Museum examined); Sclater. Cat. B. Brit. Mus., 14, p. 354, 1888—Monji; Chapman, Bull. Amer. Mus, N.H., 36, p. 494, 1917—Andalucía, summit of Eastern Andes, Colombia.

 1 An excellent species, in structure nearest to L. cineraceus. Five specimens from British Guiana examined.

²Material examined.—Ecuador: Río Napo I, Sarayacu 2.

Lathria cryptolopha cryptolopha HELLMAYR and SEILERN, Verh. Orn. Ges. Bay., 12, p. 90, 1914—El Topo, Río Pastaza, Ecuador, and Cueva Seca and Piquitamba, Río Tocache, dept. San Martín, Peru (descr. of female); Chapman, Bull. Amer. Mus. N.H., 55, p. 544, 1926—Zamora and Sabanilla, eastern Ecuador.

Range: Upper Tropical and Subtropical Zone of eastern Colombia (Andalucía, alt. 7000 ft., summit of Eastern Andes), eastern Ecuador (Monji; Zamora; Sabanilla; El Topo, Río Pastasa), and eastern Peru (Cueva Seca and Piquitamba, Río Tocache, dept. San Martín; Chinchao, dept. Huánuco).

1: Peru (Chinchao, dept. Huánuco 1).

Lipaugus cryptolophus mindoensis (Hellmayr and Seilern).2
WESTERN OLIVACEOUS PIHA.

Lathria crypotolopha (sic) mindoensis Hellmayr and Seilern, Verh. Orn. Ges. Bay., 12, p. 89, 1914—Mindo, western Ecuador; Chapman, Bull. Amer. Mus. N.H., 55, p. 545, 1926—Mindo.

Range: Western Ecuador (Mindo).

*Lipaugus unirufus unirufus Sclater. Rufous Piha.

Lipaugus unirufus Sclater, P.Z.S.Lond., 27, p. 385, 1859—state of Oaxaca, Mexico (type) and Cobán, Guatemala; idem and Salvin, Ibis, 1860, p. 36—Cobán, Guatemala; Sclater, P.Z.S.Lond., 1861, p. 211—Mexico and Guatemala; Sclater and Salvin, Exotic Orn., pp. 1, 6, pl. 1, 1866—part, Oaxaca and Guatemala; Sumichrast, Mem. Boston Soc. N.H., 1, p. 558, 1869—Vera Cruz, Mexico.

Lathria unirufa Sclater, Cat. B. Brit. Mus., 14, p. 353, 1888—part, spec. a-g, Vera Cruz and Choctum, Guatemala, and British Honduras; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 129, 1891—part, Vera Cruz (Mexico), British Honduras, and Guatemala.

Lathria unirufa unirufa RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 823, 1907—southeastern Mexico to Guatemala and British Honduras (monog.); BANGS and PETERS, Bull. Mus. Comp. Zool., 67, p. 478, 1927—Presidio, Vera Cruz.

¹Material examined.—Ecuador: Monji (the type) 1; El Topo, Río Pastasa, alt. 2200 ft., al. 2200 ft., al. 21, 1910. M. G. Palmer (Coll. Seilern).—Peru, dept. San Martín: Cueva Seca, Río Tocache, alt. 1800 meters, al., Aug., 1900. G. A. Baer; Piquitamba, Río Tocache, alt. 1100 meters, al., Sept., 1900. G. A. Baer (Tring Museum); Chinchao, dept. Huánuco, alt. 5700 ft., al., Nov. 19, 1922. J. T. Zimmer (Field Museum).—Wing 130-132; tail 105-113; bill 22.

²Lipaugus cryptolophus mindoensis (HELLMAYR and SEILERN): Adult male similar to L. c. cryptolophus, but smaller, and concealed base of black crest feathers extensively creamy white. Wing 125-126; tail 98-100; bill 22. Female unknown.

Material examined.-Western Ecuador: Mindo 2.

Range: Southeastern Mexico, in states of Vera Cruz and Tabasco, south to Guatemala and British Honduras.

- 1: Guatemala (unspecified 1).
- *Lipaugus unirufus castaneotinctus (Hartert). Southern Rufous Piha.
 - Lathria unirufus castaneotinctus HARTERT, Nov. Zool., 9, p. 610, 1902—Río Durango, prov. Esmeraldas, Ecuador (type in Tring Museum examined).
 - Lathria unirufa clara Ridgway, Proc. Biol. Soc. Wash., 19, p. 120, 1906—Panama (Lion Hill Station?); idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 824, 1907—Nicaragua to northern Colombia (monog.); Bangs, Auk, 24, p. 303, 1907—Pozo del Rio Grande, Costa Rica; Carriker, Ann. Carnegie Mus., 6, p. 668, 1910—Costa Rica (habits); Rendahl, Ark. Zool., 12, No. 8, p. 23, 1919—Siquirres, Costa Rica.
 - Lathria unirufa castaneotincta Hellmayr, P.Z.S.Lond., 1911, p. 1144—Nóvita, Sipi, and Río Cajón, Pacific Colombia (crit.); Chapman, Bull. Amer. Mus. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 52, 1926-Marajó Island.

Pachyrhynchus viridis cuvierii HELLMAYR, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 669, 1906—Brazil (crit.); idem, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 340, 1929—Ibiapaba, Piauhy and Baturité and Juá, Ceará (crit.).

Pachyrhamphus viridis viridis HARTERT and VENTURI, Nov. Zool., 15, p. 205, 1909—San Vicente, Chaco (spec. examined); WETMORE, Bull. U.S. Nat. Mus., 133, p. 293, 1926—Las Palmas, Chaco; Sztolcman, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 180, 1926-Therezina, Invernadinha, and Candido de Abreu, Paraná.

Pachyrhynchus viridis REISER, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 153, 1925-Santa Rita, Rio Preto, Bahia (crit.).

Range: Eastern and southern Brazil, from Marajó, Piauhy, and Ceará south to Matto Grosso and Rio Grande do Sul; eastern Bolivia (Santa Cruz); northern Argentina (Tucumán, Chaco, Santa Fé. and Misiones): Paraguay.1

15: Argentina (Concepción, Tucumán 6; Eldorado, Misiones 2; Puerto Segundo, Misiones 2); Brazil (Ibiapaba, Piauhy 1; Juá, near Iguatú, Ceará 2; Santo Amaro, Bahia 2).

¹Examination of more comprehensive material tends to show that size is too variable a character to be used for the discrimination of local races. It must be conceded, however, that the largest measurements are attained in Argentina and Paraguay, while Bahia birds average smaller than the rest.

Wing (adult males): San Vicente, Chaco 81; Lambaré, Paraguay 77; Concepción, Tucumán 80, 80; Misiones 73, 74; Santa Cruz, Bolivia 78; Curityba, Paraná 78½; São Paulo 75, 76; Matto Grosso (Cuyabá, Engenho do Gama, Sangrador) 71, 74, 76, 76; Rio de Janeiro 76; Bahia 70, 70, 70, 71, 75, 75; Santo Amaro, Bahia 72; Ceará 73, 74; Ibiapaba, Piauhy 78.

Material examined.—Argentina: San Vicente, Chaco 1; Ocampo, Santa Fé 1; Concepción, Tucumán 6; El Dorado and Puerto Segundo, Misiones 4.—Paraand Fuerto Segundo, instones 4.—Paraguay: Lambaré I.—Bolivia: Santa Cruz I.—Brazil: Paraná (Curityba; Roça Nova, Serra do Mar) 2; São Paulo (Iguapé, Victoria, Ipanemá) 4; Rio de Janeiro 2; Bahia 10; Santo Amaro, Bahia 2; Ceará (Juá, Baturité) 4; Ibiapaba, Piauhy I; Matto Grosso (Cuyabá, Sangrador, Engenho do Gama) 5. *Pachyramphus viridis xanthogenys Salvadori and Festa. Yellow-CHEEKED BECARD.

Pachyrhamphus xanthogenys Salvadori and Festa, Boll. Mus. Zool. Torino, 13, No. 330, p. 1, 1898—Río Zamora, Ecuador (type in Turin Museum examined; =adult male); idem, l.c., 14, No. 362, p. 16, 1899—Río Zamora; Chapman, Bull. Amer. Mus. N.H., 55, p. 541, 1926—below San José, Ecuador (spec. examined).

Pachyrhamphus peruanus Hartert and Goodson, Nov. Zool., 24, p. 410, 1917—Chanchamayo, "state of Cuzco" [=dept. Junin,] Peru (type in Tring Museum examined;=adult female); Chapman, Bull. Amer. Mus. N.H., 55, p. 541, 1926—Macas region, Ecuador (spec. examined).

Pachyrhamphus viridis (not Tityra viridis Vieillot) Taczanowski, P.Z.S. Lond., 1874, p. 540—Amable María, Peru (one female); idem, Orn. Pér., 2, p. 359, 1884—part, descr. of female, Amable María.

Range: Tropical Zone of eastern Ecuador (Río Zamora; below San José; near Macas) and eastern Peru (Vista Alegre, dept. Huánuco; Amable María and Chanchamayo, dept. Junín).

2: Peru (Vista Alegre, dept. Huánuco 2).

Pachyramphus viridis griseigularis Salvin and Godman.² RORAIMA BECARD.

¹Pachyramphus viridis xanthogenys Salvadori and Festa: Similar to P. v. viridis, but adult male with orbital ring, cheeks, auriculars, and throat greenish yellow instead of white or grayish, this color being much duller and more greenish than the pectoral band in P. v. viridis; grayish nuchal collar absent or faintly suggested; black areas of larger upper wing coverts more extensive; female with a chestnut patch on the wings as in P. v. viridis, but pileum mainly grayish like the hind neck (instead of bright green like the back); throat grayish (not white or buffy white) like sides of head; pectoral band greenish instead of bright yellow; middle of abdomen more purely white, washed with grayish along sides and flanks. Wing (males) 71-74, (female) 71-73; tail 52-56, (female) 51-54; bill 12½-14.

On comparing two males each from Ecuador and Peru, I notice that those from the letter country have the primaries more consciences by edged with green.

On comparing two males each from Ecuador and Peru, I notice that those from the latter country have the primaries more conspicuously edged with greenish and the greenish yellow on the anterior under parts slightly brighter. The type of *P. peruanus*, an adult female secured by C. O. Schunke at Chanchamayo, alt. 1500 meters, in January, 1905, differs from an Ecuadorian specimen in the American Museum of Natural History, New York, by having pure white (instead of buffy) abdomen and by lacking the olivaceous tinge on the lateral and posterior portions of the pileum. These divergencies are evidently individual, since Taczanowski's description of a female from Amable María, as far as the head is concerned, agrees with the Ecuadorian bird.

Material examined.—Ecuador: Río Zamora (male) I, below San José (male) I, near Macas (female) I.—Peru: Vista Alegre (males) 2; Chanchamayo (female, type of *P. peruanus*) 1.

²Pachyramphus viridis griseigularis Salvin and Godman: Agreeing with P. v. xanthogenys in the extensive black areas of the upper wing coverts and the absence of the grayish nuchal collar in the male sex; but readily distinguishable in both sexes by having the throat and foreneck pale grayish, without any greenish or yellowish jugular band; sides of the head, in the male, about the same shade as in xanthogenys; female without trace of a gray nape band.

Material examined.—British Guiana: Roraima (including the type) 2.

Pachyrhamphus griseigularis Salvin and Godman, Ibis, (5), 1, p. 208, 1883—Roraima, British Guiana (descr. of female); idem, l.c., 1884, p. 448—Roraima (descr. of male); Salvin, l.c., 1885, p. 302, pl. 8—Roraima; Sclater, Cat. B. Brit. Mus., 14, p. 339, 1888—Roraima; Chubb, Birds Brit. Guiana, 2, p. 272, 1921—Roraima.

Range: Mount Roraima in British Guiana.

*Pachyramphus versicolor versicolor (Hartlaub). VARIEGATED BECARD.

Vireo versicolor Hartlaub, Rev. Zool., 6, p. 289, 1843—"Nouvelle Grenade" = Bogotá (descr. of female).

Pachyrhynchus squamatus LAFRESNAYE, Rev. Zool., 6, p. 291, 1843—"Colombie" = Bogotá (descr. of male).

Pachyrhynchus versicolor LAFRESNAYE, Rev. Zool., 7, p. 46, 1844 (crit.).

Pachyrhamphus versicolor Cabanis, Arch. Naturg., 13, (1), p. 243, 1847-"Neu Granada" (descr. of adult male); Sclater, P.Z.S.Lond., 23, p. 150, 1855-Bogotá; idem, l.c., 25, p. 76, 1857-Bogotá (descr. of male and female); idem, l.c., 26, p. 71, 1858-Río Napo, Ecuador; idem, Cat. Coll. Amer. Birds, p. 243, 1862—Bogotá; Sclater and Salvin, P.Z.S.Lond., 1879, p. 518—Antioquia = Medellín; TACZANOWSKI, l.c., 1874, p. 540— Pumamarca, Peru; idem, l.c., 1879, p. 236-Tambillo, Peru; idem, l.c., 1882, p. 23-Tamiapampa, Peru; idem, Orn. Pér., 2, p. 366, 1884-Pumamarca, Sillapata, Tambillo, and Tamiapampa, Peru; BERLEPSCH and Taczanowski, P.Z.S.Lond., 1884, p. 298—Cayandeled, Ecuador; idem, l.c., 1885, p. 93-Machay, Ecuador; Sclater, Cat. B. Brit. Mus., 14, p. 339, 1888-Bogotá, Medellín, and Intac (Ecuador); SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 125, 1890—part, Colombia and Ecuador; Berlepsch and Stolzmann, P.Z.S.Lond., 1896, p. 369-Vitoc, Huacras, Peru; Salvadori and Festa, Boll. Mus. Zool Torino, 14, No. 362, p. 16, 1899—Gualea, Ecuador; Goodfellow, Ibis, 1901, p. 710— Intac, Ecuador; BERLEPSCH and STOLZMANN, Ornis, 13, p. 90, 1906—Idma, above Santa Ana, Peru; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 843, 1907-part, Colombia, Ecuador, Peru, and Venezuela; Ménégaux, Miss. Serv. Géog. Armée Mes. Arc Mérid. Equat., o, p. B61, 1911—Anca (Nanegal), Ecuador; Chapman, Bull. Amer. Mus. N.H., 36, p. 490, 1917 -San Antonio, Cerro Munchique, Miraflores, El Eden, Aguadita, El Roble, Colombia.

Pachyrhamphus versicolor versicolor Chapman, Bull. U.S.Nat. Mus., 117, p. 100, 1921—San Miguel Bridge, Urubamba, Peru; idem, Bull. Amer. Mus. N.H., 55, p. 541, 1926—Baeza, below Oyacachi, lower Sumaco, Ecuador.

Range: Subtropical Zone of Colombia (all three ranges of the Andes) and extreme western Venezuela (Cordillera de Mérida), south through Ecuador and Peru to the Urubamba Valley, dept. Cuzco.¹

¹Specimens from Colombia and Ecuador appear to agree, while the few Peruvian skins seen by me are generally less barred underneath.

Material examined.—Colombia: Bogotá 12; Antioquia 2; Cerro Munchique 1.—Ecuador: Intac 6; Nanegal 1; unspecified 2.—Peru: Vitoc 1; Idma, Urubamba, Cuzco 1.—Venezuela: El Escorial, Mérida 1.

3: Colombia (Bogotá 2; Cerro Munchique, coast range west of Popayán, Cauca 1).

*Pachyramphus versicolor costaricensis Bangs. BARRED BECARD.

Pachyrhamphus versicolor costaricensis Bangs, Proc. New Engl. Zool. Cl., 4, p. 26, 1908—Irazú, Costa Rica; Carriker, Ann. Carnegie Mus., 6, p. 665, 1910—Volcán de Irazú and Río Luisa, Costa Rica; Ferry, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 269, 1910—Coliblanco, Costa Rica.

Pachyrhamphus versicolor (not of Hartlaub) Boucard, P.Z.S.Lond., 1878, p. 65—La Candelaria, Costa Rica; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 125, 1890—part, La Candelaria, Costa Rica; Cherrie, Proc. U.S.Nat. Mus., 14, p. 535, 1891—La Palma de San José; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 843, 1907—part, Costa Rica.

Range: Subtropical Zone of Costa Rica (Volcán de Irazú; Río Luisa; La Palma de San José; Coliblanco; La Candelaria).

1: Costa Rica (Coliblanco 1).

Pachyramphus surinamus (Linnaeus). Surinam Becard.

Muscicapa surinama Linnaeus, Syst. Nat., 12th ed., 1, p. 325, 1766—Surinam (descr. of male).²

Tityra surinama STRICKLAND, Contrib. Ornith., 1848, p. 62-9, pl. 11 (=adult male)—South America, probably Surinam.

Pachyrhamphus dimidiatus FILIPPI, Mus. Mediolan., Animalia Vertebr., Cl. 2, (Aves), p. 31, 1847—locality uncertain (descr. of male).

Bathmidurus melanoleucus Cabanis, Arch. Naturg., 13, (1), p. 244, 1847—part, descr. of young male, "Brazil," errore, = Cayenne or Guiana (see Mus. Hein., 2, p. 88, 1859).

Pachyrhamphus surinamus Sclater, P.Z.S.Lond., 25, p. 74, 1857—Surinam and Cayenne (descr. of male and female); Pelzeln, Orn. Bras., 2, p. 120, note 4, 1868—Cayenne (descr. of immature male); Sclater, Cat. B. Brit. Mus., 14, p. 340, 1888—Cayenne; Berlepsch, Nov. Zool., 15, p. 141, 1908—Cayenne; Penard and Penard, Vog. Guyana, 2, p. 154, 1910—Surinam.

Zetetes surinamus Cabanis and Heine, Mus. Hein., 2, p. 88, 1859—Cayenne or Guiana (synon. in part).

¹Pachyramphus versicolor costaricensis Bangs: Very similar to P. v. versicolor, but male with sides of the head much brighter olive yellow, and wider as well as blacker bars underneath; female likewise much brighter olive yellow on under parts, cheeks, and auriculars.

Material examined.—Costa Rica: Irazú I, Coliblanco I.

²Linnaeus fails to mention the white patch at the base of the scapulars, a character easily overlooked in a mounted specimen.

Range: French and Dutch Guiana, and northern Brazil (Obidos).1

Pachyramphus spodiurus Sclater. GRAY-TAILED BECARD.

Pachyrhamphus spodiurus Sclater, P.Z.S.Lond., 28, p. 279, 1860—Babahoyo, Ecuador (descr. of male and female); idem, l.c., p. 296, 1860—Esmeraldas, Ecuador; Berlepsch and Taczanowski, l.c., 1883, p. 559—Chimbo, Ecuador; idem, l.c., 1885, p. 93—Yaguachi, Ecuador; Taczanowski, Orn. Pér., 2, p. 362, 1884—Lechugal, Peru; Sclater, Cat. B. Brit. Mus., 14, p. 341, pl. 25, 1888—Babahoyo, Ecuador; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 16, 1899—Vinces, Ecuador; Goodfellow, Ibis, 1901, p. 710—Santo Domingo, Ecuador; Chapman, Bull. Amer. Mus. N.H., 55, p, 542, 1926—Bucay, Daule, and Porto Velo, Ecuador.

Range: Tropical Zone of western Ecuador (north to Esmeraldas) and extreme northwestern Peru (Lechugal, prov. Túmbez).

*Pachyramphus rufus (Boddaert). CINEREOUS BECARD.

Muscicapa rufa Boddaert, Tabl. Pl. Enl., p. 27, 1783—based on "Le Gobemouche roux, de Cayenne" Daubenton, Pl. Enl. 453, fig. 1, Cayenne (=female).

¹A single adult male from Obidos has the lateral rectrices more decidedly tipped with white than two from French Guiana. The female of this rare species, in pattern of coloration, recalls that of *Xenopsaris albinucha*, suggesting that the latter's affinities may be, after all, with the Cotingidae rather than with the Flycatchers.

Material examined.—French Guiana: Cayenne 2; Tamanoir, Mana River 2; Pied Saut, Oyapock 1.—Brazil: Obidos 1.

²Pachyramphus spodiurus SCLATER is most nearly related to P. rufus and may utimately prove to be its Pacific representative. The male resembles it in the but faintly glossed pileum and in the pattern of the upper wing coverts, particularly in the narrow, irregular white fringes to the greater series, and the female agrees with that of its eastern ally in the ochraceous tawny upper parts and in having the primaries, along the outer web, narrowly edged with ochraceous tawny, abruptly defined from the blackish inner half of the vane. P. spodiurus differs, however, in larger size, longer, slenderer bill, and in the male sex by more elongated nuchal feathers, blackish upper back, dark gray (instead of whitish) under parts and lores, blackish auriculars, and in lacking the white frontal band and apical edges to the tail, while the female may be distinguished by its uniform ochraceous lower surface. Wing (male) 70-78, (female) 71-76; tail 55-59; (female) 55-56; bill 14-15.

Material examined.—Ecuador: Chimbo 2, Daule 1, Porto Velo 1.

³I do not know what to make of *Muscicapa eques* BODDAERT (Tabl. Pl. Enl., p. 51, 1783—based on "Le Gobe-mouche roux à poitrine orangée, de Cayenne" BUFFON, Hist. Nat. Ois., (Impr. Roy.), 5, p. 247, 1778, and DAUBENTON, Pl. Enl. 831, fig. I—"un spécimen au Cabinet du Roi") and *Muscicapa aurantia* GMELIN (Syst. Nat., I, (2), p. 932, 1789—based on the same references). Among the numerous females of *P. rufus* examined in the present connection, there is not one answering to Buffon's description: "la tête et le haut du cou sont d'un brun verdâtre; le dos est d'un roux surchargé de la même teinte de vert," nor do these terms fit any other Guianan species with which I am acquainted. The original specimen unfortunately is no longer in the Paris Museum.

- Pipra cinerea Boddaert, Tabl. Pl. Enl., p. 43, 1783—based on "Manakin cendré, de Cayenne" Daubenton, Pl. Enl. 687, fig. 1, Cayenne (=adult male).
- Muscicapa rufescens GMELIN, Syst. Nat., 1, (2), p. 932, 1789—based on "Le Gobe-mouche roux, de Cayenne" DAUBENTON, Pl. Enl. 453, fig. 1, Cayenne (=female).
- Pipra atricapilla GMELIN, Syst. Nat., 1, (2), p. 1003, 1789—based on "Manakin cendré, de Cayenne" DAUBENTON, Pl. Enl. 687, fig. 1, Cayenne (=adult male).
- Lanius mitratus Lichtenstein, Verz. Dubl. Berliner Mus., pp. 50, 51, 1823—Cayenne (descr. of adult male and female).

Orn., 55, p. 290, 1907-Pará, Rio Capim, Rio Mojú, Monte Alegre (crit.); RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 838, 1907-part, Panama to Colombia, Venezuela, Cayenne, Surinam, and Lower Amazonia (excl. eastern Peru and "southern Brazil, Rio Juruá, São Paulo") (monog.); BERLEPSCH, Nov. Zool., 15, p. 140, 1908—Cayenne and R. Approuague, French Guiana; PENARD and PENARD, Vog. Guyana, 2, p. 153, 1910-Surinam (eggs descr.); SNETHLAGE, Journ. Orn., 61, p. 525, 1913 (ecology); idem, Bol. Mus. Goeldi, 8, p. 349, 1914-Pará, Rio Capim (Aproaga), Rio Mojú, Rio Tocantins (Arumatheua), Rio Xingú (Victoria), Cussary, Marajó (Chaves), Monte Alegre, and Rio Jamundá (Faro); CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 252, 1916-Orinoco Region; STONE, Proc. Ac. Nat. Sci. Phila., 70, p. 269, 1918-Gatún, Panama.

Pachyrhynchus rufus HELLMAYR, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 669, 1906 (crit., synonymy).

Pachyrhamphus rufus HELLMAYR, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 90, 1912-Pará, Rio Mojú, Capim; p. 111, 1912-Fazenda Nazareth, Mexiana; STONE, Proc. Ac. Nat. Sci. Phila., 65, p. 205, 1913-Manimo River, Orinoco delta, Venezuela; BEEBE, Zoologica (N.Y.), 2, p. 93, 1916-Utinga, Pará; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 491, 1917-Río Lima, Colombia; BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 70, 1918—vicinity of Paramaribo and Lelydorp, Surinam; CHUBB, Birds Brit. Guiana, 2, p. 273, 1921-Supenaam River, Mazaruni River, Bonasica, Great Falls of Demerara, and Bartica Grove; Todd and CAR-RIKER, Ann. Carnegie Mus., 14, p. 328, 1922-Don Diego, Tucurinca, Fundación, and Loma Larga, Santa district (spec. examined); STONE, Proc. Ac. Nat. Sci. Phila., 80, p. 168, 1928-Castanhal, Pará.

Range: French, Dutch, and British Guiana; Venezuela (from the north coast in states of Sucre, Caracas, Carabobo, Lara, and Zulia south to the Orinoco and its tributaries); Colombia (Eastern Andes; Magdalena and Cauca Valleys; Santa Marta region); Panama; northern Brazil, in states of Pará and Amazonas, west to the Tapajóz and the Rio Negro (Manacapurú).1

¹No authentic record exists for its occurrence on the island of Trinidad. As far as I can see, birds from so widely separated regions as Colombia, French Guiana, and Lower Amazonia agree well together.

Material examined.—Colombia: Bogotá 6; El Cauca, Santander 2; Aguachica, dept. Magdalena 2; Loma Larga, dept. Magdalena 1; Fundación 6; Don Diego 1; Tucurinca 2; Yumbo, dept. Valle 2.—Venezuela: San Feliz, Orinoco River 1; Upata 2; El Callao, Río Yuruari 4; Macuto, Caracas 1; San Esteban, Carabobo 2; El Trompillo, Carabobo 2; Anzoátegui, Lara 1; Sabana Mendoza, Mérida 5; Catatumbo River, Zulia 1.—French Guiana: Cayenne 4; Mana River 8; Pied Saut, Oyapock 6.—Brazil: Pará 3; Itacoatiará 1; Santarém 7; Goyana 1; Villa Braga 1; Miritituba 1; Obidos 6; Manacapurú 8.

- 8: Colombia (Bogotá 5); Venezuela (Catatumbo River, Zulia 1; Macuto, Caracas 1); Brazil (Itacoatiará 1).
- *Pachyramphus castaneus castaneus (Jardine and Selby). Rufous Becard.

Paul., 3, p. 212, 1899—Piquete and Iguapé, São Paulo; idem, l.c., 4, p. 156, 1900—Cantagallo and Nova Friburgo, Rio; idem, l.c., 5, p. 299, 1902—Baurú, São Paulo (nest and eggs descr.).
 - Zeteles polychropterus (not Platyrhynchos polychopterus VIEILLOT) CABANIS and Heine, Mus. Hein., 2, p. 87, 1859—part; CABANIS, Journ. Orn., 22, p. 89, 1874—Cantagallo, Rio (crit.).
 - Hadrostomus borellianus Bertoni, Anal. Cient. Parag., Ser. 1, No. 1, p. 108, 1901—Alto Paraná, Paraguay.
 - Pachyrhynchus castaneus Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 670, 1906 (nomenclature).
 - Pachyrhamphus castaneus IHERING and IHERING, Cat. Faun. Braz., 1, p. 307, 1907—Itatiba, Piquete, Ubatuba, Baurú, Rio Feio, and Iguapé (São Paulo), Rio Doce (Espirito Santo), and Bahia; HELLMAYR, Nov. Zool.,

¹The type formed part of the shipment containing the type of *Tityra vieilloti* [= P. v. viridis], for which Brazil is given by the describers as habitat.

²The type, labeled "Pachyrhynchus ruficeps Sw. Brazil. Lan. mitrata Licht. Q," is a female, without spurious (second) primary, of the south-Brazilian form, with the gray band encircling the rufous crown laterally and posteriorly. It measures: wing 76; tail 67; bill 13.

15, p. 57, 1908—Fazenda Esperança, Goyaz; Chubb, Ibis, 1910, p. 603—Sapucay, Paraguay; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 311, 1910—Alto Paraná; Bertoni, Anal. Soc. Cient. Arg., 75, p. 94, 1913—Misiones; idem Faun. Parag., p. 58, 1914—Paraguay; Dabbene, Bol. Soc. Physis, 1, p. 348, 1914—Santa Ana, Misiones.

Pachyrhamphus castaneus castaneus Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 23, p. 321, 1912—Gran Potrero, Paraguay.

Range: Eastern Brazil, from southern Bahia, Minas Geraes, and southern Goyaz (Fazenda Esperança, near Goyaz City) south to Santa Catharina, adjoining sections of Paraguay (Sapucay; Alto Paraná), and Argentina (Misiones).

5: Argentina, Misiones (Eldorado 2, Puerto Segundo 1, Río Paranay 1, Caraguatay, Río Paraná, 100 mi. south of Rio Iguassú 1).

Pachyramphus castaneus intermedius Berlepsch.² Intermediate Becard.

Pachyrhamphus intermedius BERLEPSCH, Ornith. Centralblatt, 4, p. 63, 1879—San Esteban and Puerto Cabello, Venezuela; idem, Journ. Orn., 27, p. 208, 1879—same localities.

Pachyrhamphus sp. Sclater and Salvin, P.Z.S.Lond., 1868, p. 628—San Esteban.

Pachyrhamphus rufus (not Muscicapa rufa Boddaert) Sclater, Cat. B. Brit. Mus., 14, p. 343, 1888—part, spec. l, m, San Esteban, Venezuela.

Pachyrhamphus castaneus intermedius Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 88, 1912—Las Quiguas, San Esteban Valley, Venezuela (crit.).

Range: North coast of Venezuela, from Sucre west to Lara.

Pachyramphus castaneus saturatus Chapman.³ Saturated Becard.

¹Birds from Misiones agree with a series from southern Brazil, while three from Bahia average rather smaller.

Material examined.—Misiones (as specified above) 5.—Brazil: Blumenau, Santa Catharina 2; Curityba, Paraná 1; Ipanemá, São Paulo 5; Pahor, São Paulo 1; Agua Suja, near Bagagem, Minas Geraes 4; "Rio" skins 3; Bahia 3.

²Pachyramphus castaneus intermedius BERLEPSCH: Similar to P. c. castaneus, but slightly smaller, particularly with shorter tail; under parts much paler, less tawny, passing into buff on throat and along middle of abdomen. Wing (adult male) 77-79, (female) 71-77; tail 57-62.

Material examined.—Sucre: inland of Cumaná 8.—Distrito Federal: Galipán, Cerro del Avila 1, Loma Redonda, north of Caracas 6.—Carabobo: Las Quiguas, San Esteban Valley 2; Sierra de Carabobo 2.—Lara: Aroa 3.

³Pachyramphus castaneus saturatus Chapman: Near to P. c. castaneus, but darker above, the cap deeper chestnut, the back deep hazel, little lighter than the crown; under parts paler and not so uniform ochraceous tawny. Wing (female) 70-73; tail 53-55.

Material examined.—Ecuador: Sarayacu 2, Río Zamora I, Río Santiago I.
—Peru: Río Tigre, near Pebas (Qad., Oct. 19, 1883. J. Hauxwell. Berlepsch Collection) I.—Brazil: Manacapurú I; Tonantins 6; São Paulo de Olivença 2; Caviana, Rio Solimões 3; Hyutanahán, Rio Purús 2.

- Pachyrhamphus castaneus saturatus Chapman, Bull. Amer. Mus. N.H., 33, p. 628, 1914—La Morelia, Río Caquetá, Colombia; idem, l.c., 36, p. 492, 1917—La Morelia; idem, l.c., 55, p. 542, 1926—eastern Ecuador.
- Pachyrhamphus niger (not of SPIX) TACZANOWSKI, P.Z.S.Lond., 1882, p. 23—Yurimaguas, Peru, part (female); SZTOLCMAN, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 227, 1926—part, descr. of female, Yurimaguas.¹
- Pachyrhamphus rufescens (not of SPIX) TACZANOWSKI, Orn. Pér., 2, p. 368, 1884—Pebas and Yurimaguas, Peru (descr. of male and female).
- Pachyrhamphus rufus (not Muscicapa rufa Boddaert) Sclater, Cat. B. Brit. Mus., 14, p. 343, 1888—part, spec. j, k, Sarayacu, Ecuador; (?) IHERING and IHERING, Cat. Faun. Braz., 1, p. 307, 1907—part, Rio Juruá; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 16, 1899—Río Zamora and Río Santiago, Ecuador (spec. examined); Chapman, Bull. Amer. Mus. N.H., 55, p. 541, 1926—Ecuador (ex Salvadori and Festa).
- Pachyrhamphus castaneus intermedius (not of Berlepsch) Chubb, Ibis, 1910, p. 604—Sarayacu, Ecuador (crit.).
- (?) Pachyrhamphus cinereus (not of BODDAERT) IHERING, Rev. Mus. Paul., 6, p. 435, 1905—Rio Juruá.

Range: Tropical Zone of southeastern Colombia (La Morelia, Río Caquetá), eastern Ecuador (Sarayacu; Río Zamora; Río Santiago), northern Peru (Pebas and Rio Tígre, Río Marañón; Yurimaguas, lower Huallaga, dept. Loreto), and northwestern Brazil (Caviana, Manacapurú, Tonantins, and São Paulo de Olivença, Rio Solimões; Hyutanahán, Rio Purús).²

Pachyramphus castaneus subsp.3

¹M. Sztolcman is, of course, quite mistaken in associating this rufous female with *P. niger*. It is now a well-established fact that there are a number of species in which both sexes are rufous, the adult male differing only by possessing the spurious second primary.

²I suspect that *Pachyrhamphus cinereus* Sclater and Salvin (P.Z.S.Lond., 1866, p. 190—Sarayacu; l.c., 1873, p. 284—Sarayacu, Chyavetas, and Chamicuros, Peru) and Taczanowski (Orn. Pér., 2, p. 360, 1884—part, same localities) were also based on specimens of this rufous species, considered at that time to represent the female and immature plumage of species with gray or black males. There is an example from the upper Ucayali in the British Museum, erroneously referred to *P. cinnamomeus* by the late P. L. Sclater (Cat. B. Brit. Mus., 14, p. 343, 1888—spec. y).

It remains to be seen to what form Bolivian birds (Pachyrhamphus rufescens (not of SPIX) ALLEN, Bull. Amer. Mus. N.H., 2, p. 88, 1889—"La Paz") should be referred. As in the case of so many other species in H. H. Rusby's collection, the locality "La Paz" is doubtless erroneous.

³Pachyramphus castaneus subsp.: Nearly related to P. c. saturatus, but paler throughout, the under parts particularly more buffy, less ochraceous tawny.

Material examined.—In addition to an immature male from Ig. de Paituna (Monte Alegre) in the Goeldi Museum and an unsexed bird (without rudimentary second primary) from Santarém in the Museu Paulista, I have seen thirty-six skins of this obviously undescribed form from Santarém, Obidos, and islands near Obidos in the collection of the Carnegie Museum.

Pachyrhamphus rufus (not Muscicapa rufa Boddaert) Riker and Chapman, Auk, 8, p. 25, 1891—Santarém, Rio Tapajóz; Ihering and Ihering, Cat. Faun. Braz., 1, p. 307, 1907—part, Santarém (spec. examined); Snethlage, Journ. Orn., 61, p. 525, 1913—Varzea north of the Amazon.

Pachyrhamphus castaneus (not Tityra castanea Jardine and Selby) Sneth-Lage, Bol. Mus. Goeldi, 8, p. 350, 1914—Monte Alegre (Ig. de Paituna), Obidos, and Rio Jamundá (Faro).

Range: Northern Brazil, on the banks of the lower Amazon (Faro, Rio Jamundá; Obidos; Santarém, Rio Tapajóz).

*Pachyramphus cinnamomeus cinnamomeus Lawrence. CINNAMON BECARD.

Pachyramphus cinnamomeus LAWRENCE, Ann. Lyc. Nat. Hist. N. Y., 7, p. 295, 1862—Lion Hill, Panama Railroad.

Pachyrhamphus rufescens? (not of SPIX) CASSIN, Proc. Ac. Nat. Sci. Phila., 1860, p. 189—Turbo, Colombia.

Pachyrhamphus—? Sclater and Salvin, Ibis, 1860, p. 36—Cobán, Guatemala; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 7, p. 296, 1862—Lion Hill, Panama.

U. S. Nat. Mus., 10, p. 589, 1887-Segovia River, Honduras; Sclater, Cat. B. Brit. Mus., 14, p. 342, 1888—part, spec. a-p, u, Choctum, Vera Paz, Angostura, Tucurriquí, Lion Hill, Chepo, Balzar (Ecuador); SALVIN and GODMAN, Biol. Centr-. Amer., Aves, 2, p. 126, 1890-part, British Honduras and Guatemala south to Ecuador (excl. Remedios, Colombia); RICHMOND, Proc. U.S.Nat. Nus., 16, p. 508, 1893-Río Escondido, Nicaragua; HAR-TERT, Nov. Zool., 5, p. 489, 1898-Chimbo and Cachaví, Ecuador; SAL-VADORI and FESTA, Boll. Mus. Zool. Torino, 14, No. 339, p. 6, 1899-Punta de Sabana, Panama; BANGS, Proc. New Engl. Zool. Cl., 2, p. 23, 1900-Loma del León, Panama; idem, Bull. Mus. Comp. Zool., 39, p. 149, 1903—Yaruca, Honduras; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 840, 1907-part, southern Mexico south to western Ecuador (excl. Bogotá, Remedios, Bucaramanga, "Cauta," Colombia, and Ucayali, eastern Peru);1 CARRIKER, Ann. Carnegie Mus., 6, p. 666, 1910-Carrillo, Cariblanco de Sarapiquí, Tuis, Guacimo, and El Hogar, Costa Rica; FERRY, Field Mus. Nat. Hist. Pub., Orn. Ser., 1, p. 269, 1910—Guayabo, Costa Rica; HELLMAYR, P.Z.S.Lond., 1911, p. 1144-Guineo, El Tigre, San Joaquín, Noanamá, and Nóvita, Pacific Colombia; CHAPMAN, Bull. Amer. Mus. N. H., 36, p. 491, 1917-part, Alto Bonito, Juntas de Tamaná, Nóvita, Noanamá, Buenaventura, San José, Los Cisneros, and Barbacoas, Pacific Colombia; STONE, Proc. Ac. Nat. Sci. Phila., 70, p. 269, 1918—Gatún, Panama; RENDAHL, Ark. Zool., 12, No. 8, p. 23, 1919—Siquirres, Costa Rica and San Juan del Norte, Nicaragua; BANGS and BARBOUR, Bull. Mus. Comp. Zool., 65, p. 213, 1922—Jesusito, Darién; CHAPMAN, Bull. Amer.

¹The bird from the Ucayali, Peru, is probably referable to *P. castaneus satu-* ratus Chapman.

Mus. N.H., 55, p. 542, 1926—Bucay, Esmeraldas, Manaví, Chimbo. Santa Rosa, and Porto Velo, Ecuador; Griscom, Bull. Mus. Comp. Zool., 69, p. 181, 1929-Cana, Darién.

Range: Tropical Zone of southern Mexico (in state of Tabasco) and southward through Guatemala, British Honduras, Honduras, Nicaragua, Costa Rica, and Panama to Pacific Colombia and western Ecuador.1

5: Costa Rica (Guayabo 2); Colombia (Quibdó, Atrato River 1: Alto Bonito, Antioquia 1: Nóvita, Río San Juan 1).

*Pachyramphus cinnamomeus magdalenae Chapman.² Magdalena BECARD.

Pachyrhamphus magdalenae Chapman, Bull. Amer. Mus. N.H., 33, p. 629. 1914—Algodonal, lower Magdalena Valley, Colombia; idem, l.c., 36, p. 491, 1917—Algodonal.

¹Birds from Pacific Colombia, while agreeing in the coloring of the upper parts with those from Costa Rica, are less deeply colored underneath, and thereby form the transition to P. c. magdalenae, of eastern Colombia. The majority are not so dark or so uniformly ochraceous as those from Costa Rica and Guatemala, but deeper buff, especially on breast and sides, than the average from Santa Marta and the Magdalena Valley, though the most deeply colored individuals are not separable from certain light-bellied Central American skins, whereas the palest (one from Sautata and one from Córdoba, Valle) can be exactly matched by the darkest variety of magdalenae (Carnegie Museum, No. 52798, Jaraquiel). Unfortunately, no material from the Canal Zone, the type locality, has been available for examination.

Material examined.—Guatemala 3; Costa Rica 12.—Colombia: Sautata, Río Atrato 3; Alto Bonito, Río Sucio 1; Murindo, Antioquia 3; Quibdó 4; El Tambo, Chocó 1; Andagoya, Chocó 4; Potedo, Chocó 1; Malagita, Chocó 1; Noanamá, Río San Juan 2; Nóvita, Río Tamaná 2; El Tigre, Río Tamaná 1; Guineo, Río Calima 1; San Joaquín, Bahía del Chocó 2; Córdoba, Valle 2.— Ecuador: Chimbo I.

²Pachyramphus cinnamomeus magdalenae Chapman: Similar to P. c. cinnamomeus, but decidedly paler throughout; upper parts browner, sayal brown rather than rufous tawny, the cap hardly darker than the back; the wing coverts with more conspicuous pale edges; lower surface buffy rather than ochraceous tawny, passing into whitish on the abdomen.

Birds from the Santa Marta region (Tucurinca and Fundación) are identical with a series from the lower Magdalena (Calamar and Gamarra) and Jaraquiel, (dept. Bolívar) in the collection of the Carnegie Museum, Pittsburgh. Six specimens from Santa Elena, Mérida, and six from Zulia, Venezuela, as well as two adult males from Santander, eastern Colombia (Carnegie Museum, No. 59317, Bucaramanga; No. 58705, El Tambor, Río Lebrija) are very similar, though perhaps on the average more reddish on the back, with the crown somewhat darker, but not so chestnut rufous as in P. c. cinnamomeus, from Pacific Colombia. Underneath, they resemble the darker specimens from the Magdalena, the male from El Tambor being in no way distinguishable from No. 54360, Gamarra, but can also be matched by certain individuals from the Pacific coast of Colombia. Unless separated again, they must doubtless be ranked with magdalenae rather than cinnamomeus.

Material examined.—Colombia: Fundación 8; Tucurinca 2; Jaraquiel, dept. Bolívar 4; Calamar, lower Magdalena 5; Gamarra, dept. Magdalena 2; Bucaramanga 1; El Tambor, Río Lebrija, Santander 1; "Bogotá" 2.—Venezuela: Santa Elena, Mérida 6; Encontrados, Zulia 3; Orope, Zulia 3.

Pachyrhamphus cinnamomeus (not of LAWRENCE)SCLATER and SALVIN, P. Z. S. Lond., 1879, p. 518—Remedios, Antioquia; BERLEPSCH, Journ. Orn., 32, p. 305, 1884—Bucaramanga; SCLATER, Cat. B. Brit. Mus., 14, p. 342, 1888—part, spec. q-t, v-x, Remedios, Bogotá, "Cauta" [=Canta, below Bucaramanga, Santander], Colombia; RIDGWAY, Bull. U.S.Nat. Mus. Mus., 50, Part 4, p. 840, 1907—part Bogotá, Remedios, Bucaramanga, "Cauta," Colombia; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 491, 1917—part, Puerto Valdivia, Malena, west of Honda and (?) Buenavista, above Villavicencio, Colombia.

Pachyrhamphus sp.? WYATT, Ibis, 1871, p. 334—San Nicolás, below Bucaramanga, Santander, Colombia.

Pachyrhamphus cinnamomeus magdalenae Todd and Carriker, Ann. Carnegie Mus., 14, p. 328, 1922—Fundación and Tucurinca, Santa Marta region (crit.).

Range: Northern and eastern Colombia (Jaraquiel, dept. Bolívar; lower Cauca; Magdalena Valley and tributaries; Santa Marta region; "Bogotá") and western Venezuela (Santa Elena, Mérida; Encontrados and Orope, Zulia).

6: Venezuela, Zulia (Encontrados 3, Orope 3).

*Pachyramphus polychopterus spixii (Swainson). Spix's Becard.

Pachyrhynchus spixii Swainson, Anim. Menag., p. 289, Dec., 1837—Brazil? (type of male in Coll. Swainson, now in Cambridge (Eng.) Museum examined).1

Pachyrhamphus notius Brewster and Bangs, Proc. New Engl. Zool. Cl., 2, p. 53, Feb. 15, 1901—Concepción del Uruguay, Entre Rios; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 311, 1910—lower Uruguay.

'Swainson, in diagnosing the species, ascribes it to the Paris Museum and his own collection, and while I have not been able to trace the whereabouts of the female, two adult males bearing the name P. spixii are still in existence. One, kindly sent by Dr. H. Gadow from the Swainson Collection, now in the University Museum of Cambridge, England, and labeled by Swainson himself "Pachyrhynchus Spixii. Male. Brazil?", agrees in every particular with his description, notably in having the nape, back and interscapulars dull black, decidedly contrasted with the dark gray rump and upper tail coverts, and the under parts but slightly paler than the rump. In coloration and size, it is identical with specimens from Rio de Janeiro, which I am unable to separate from Paraguayan and Argentina skins (P. notius). The other example, a mounted bird in the Paris Museum (No. 3625. & P. polychropterus V., P. spixii Sw. type, M. Menétriér [sic], 1824. Brésil"), however, is very different, having a whitish orbital ring, the back light ashy gray like the rump, with restricted outer margins of glossy black to some of the lateral interscapulars only, and the under parts of a very much paler, clearer gray, while the dimensions are much smaller. As a matter of fact, it is a perfectly typical specimen of P. marginatus (as stated in Nov. Zool., 32, p. 17, footnote I, 1925), but it disagrees so absolutely with the characters given by Swainson that I have no doubt whatever it is wrongly marked as "type." The handwriting on the label, while unknown to me, is certainly not Swainson's term spixii for the large southern race of the gray-bellied South American Becard, and venture to suggest Rio de Janeiro as its type locality. The specimen now in

Climacocercus cyanocephalus Bertoni, Anal. Cient. Parag., Ser. 1, No. 1, p. 112, Jan., 1901—Alto Paraná, Paraguay.

Pachyrhamphus polychropterus (not of VIEILLOT) SCLATER, P.Z.S.Lond., 25, p. 77, 1857—Rio de Janeiro to Rio Grande do Sul (synon, in part); PEL-ZELN, Orn. Bras., 2, p. 121, 1868—part, Rio de Janeiro, Sapitiba, Mugy das Cruzes (São Paulo), Curytiba (Paraná), Itararé (São Paulo), Rio Araguay (Goyaz), Cuyabá and Barra do Jaurú (Matto Grosso); Durn-FORD, Ibis, 1878, p. 61—Belgrano, Buenos Aires; BERLEPSCH and IHERING, Zeits. Ges. Orn., 2, p. 140, 1885-Linha Pirajá, Rio Grande do Sul; SCLATER and Hudson, Arg. Orn., 1, p. 162, 1888—Buenos Aires; Sclater, Cat. B. Brit. Mus., 14, p. 345, 1888—part, spec. 1-o, São Paulo, Rio Grande do Sul, and Belgrano, Buenos Aires; WITHINGTON, Ibis, 1888, p. 466-Lomas de Zamora, Buenos Aires (spec. examined); KERR, l.c., 1892, p. 131near Fortin Page, lower Pilcomayo; Allen, Bull. Amer. Mus. N.H., 5, p. 110, 1893—Chapada, Matto Grosso; APLIN, Ibis, 1894, p. 181—Río Negro, Uruguay (spec. examined); IHERING, Annuario Est. Rio Grande do Sul, 16, p. 127, 1899-Mundo Novo and São Lourenço; idem, Rev. Mus. Paul., 3, p. 213, 1899—Iguapé and Ypiranga, São Paulo; idem, Cat. Faun. Braz., 1, p. 308, 1907—part, Bebedouro, Itatiba, Yporanga, Itapura, Alto da Serra, Ubatuba, Avanhandava, Iguapé, Rincão, and São Sebastião, São Paulo; Chubb, Ibis, 1910, p. 605-Sapucay, Paraguay; PEREYRA, El Hornero, 3, p. 169, 1923—Escobar and San Isidro, Buenos Aires.

Bathmidurus polychropterus Stempelmann and Schulz, Bol. Ac. Nac. Córdoba, 10, p. 402, 1890—Córdoba.

Pachyrhamphus sp. incog. Barrows, Bull. Nutt. Orn. Cl., 8, p. 203, 1883—Concepción del Uruguay, Entre Rios.

Pachyrhamphus niger (not of Spix) Berlepsch, Journ. Orn., 35, p. 13, 1887—Lambaré, Paraguay; Bertoni, Faun. Parag., p. 58, 1914 (ex Berlepsch).

Zetetes polychropterus Lillo, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 8, p. 188, 1902—Tapia, Tucumán; idem, Rev. Letr. Cienc. Soc., 3, p. 51, 1905—Tapia.

Pachyrhamphus polychropterus polychropterus HARTERT and VENTURI, Nov. Zool., 16, p. 205, 1910—Barracas al Sud, Buenos Aires, and Ocampo,

the University Museum at Cambridge (Eng.) is obviously the actual type from which Swainson drew up his description.

P. polychopterus spixii, while closely related to the typical race, may be recognized by its larger size and, in the male sex, by its darker, more slaty under parts and more solidly black back.

Males from São Paulo and Rio de Janeiro average paler underneath and are perhaps slightly smaller than those from Paraguay and Argentina.

Length of wing (adult males): type (unspecified) 82; Rio de Janeiro 80, 81, 82; São Paulo 82, 83; Sapucay, Paraguay 83; Santa Florencia, Río Negro, Uruguay 82; Belgrano, Buenos Aires 82; Lomas de Zamora, Buenos Aires 84; Ocampo, Santa Fé 84; Isca-yacú, Santiago del Estero 84; Concepción, Tucumán 81, 82.

¹Bertoni identifies his bird with *Thamnophilus cyanocephalus* VIEILLOT (Nouv. Dict. Hist. Nat., nouv. éd., 3, p. 318, 1816—based on Azara, No. 237, Paraguay), which is described as having a white stripe along the middle of the crown, a feature not found in Spix's Becard. Azara's species appears to be undeterminable.

Santa Fé; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 311, 1910—range in Argentina; Marelli, Mem. Min. Obr. Publ. Buenos Aires, for 1922-23, p. 643, 1924—Argentina; Holt, Bull. Amer. Mus. N.H., 57, p. 310, 1928—Bemfica, Serra do Itatiaya.

Pachyrhamphus polichropterus Bertoni, Faun. Parag., p. 58, 1914—Alto Paraná, Paraguay.

Pachyrhamphus polychopterus polychopterus Bangs and Penard, Bull Mus., Comp. Zool., 64, p. 383, 1921—northern Argentina, southern Bolivia, Uruguay, southern Brazil (monog.); SZTOLCMAN, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 180, 1926—Guarapuava, Candido de Abreu, and Invernadinha, Paraná.

Bathmidurus variegatus [not of SPIX (?)]² CABANIS, Arch. Naturg., 13, (1), p. 244, 1847—Brazil, part; BURMEISTER, Syst. Übers. Th. Bras., 2, p. 452, 1856—Brazil, part.

¹I have recently compared the type in the Paris Museum (No. 3621. Exp. Baudin) with numerous examples from various parts of Brazil and Argentina, and found it to be identical, in coloration and size, with skins from Bahia. The wing measures 75 (in other Bahia specimens 73, 75, 75, 77, 78, 78); the tail 57 (against 57, 58, 60, 60, 60, 62).

²Pachyrhynchus variegatus SPIX (Av. Bras., 2, p. 31, pl. 43, fig. 2, 1825—no locality given; type lost), based on a female or immature example of this group, appears to me utterly unidentifiable. It might have been either polychopterus,

- Pachyrhamphus polychropterus Sclater, Cat. B. Brit. Mus., 14, p. 345, 1888—part, spec. f-k, Bahia; Ihering, Cat. Faun. Braz., 1, p. 308, 1907—part, Bahia; Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 70, 1910—Fazenda de Fora, Rio Grande, Bahia, and Lagôa do Purgatorio and Parnaguá, Piauhy (spec. examined).

Range: Western Brazil, from the Rio Madeira and Rio Negro westwards; eastern Peru; eastern Ecuador; southeastern Colombia (La Morelia and Florencia, Caquetá).

4: Peru (Yurimaguas 1; Río Colorado, Chanchamayo 1; Huachipa, Huánuco 2).

*Pachyramphus polychopterus tristis (Kaup). KAUP'S BECARD.

Psaris marginatus tristis KAUP, P.Z.S.Lond., 19, "1851," p. 48, October,

¹Material examined.—Peru: Nauta 2; Pebas 3; Yurimaguas 1; Río Colorado, Chanchamayo 1; Huachipa 2.—Ecuador: Archidona 1; Sarayacu 3; Río Napo 2.—Brazil: Hyutanahán, Rio Purús 8; Arimã, Rio Purús 3; Caviana, Rio Solimões 5; São Paulo de Olivença, Rio Solimões 2; Borba, Rio Madeira 5; Calama, Rio Madeira 2; Humaythá, Rio Madeira 4.

²Pachyramphus polychopterus tristis (KAUP) is exceedingly close to, and in many cases not distinguishable from, P. p. niger. Yet on comparing twelve males from French Guiana (Cayenne and Mana River) with a series from Upper Amazonia, it is evident that they generally have less black in the plumage, the under parts being mostly slate gray, more or less freckled with whitish along the abdominal line, and the rump likewise extensively slate gray, whereas in P. p. niger both upper and lower surfaces are almost entirely black. Birds from Venezuela, British Guiana, and Trinidad vary within the same limits, and I do not see how either P. macconnelli or P. albiloris can be maintained. The type of P. n. tobagensis, too, is matched by numerous examples from Guiana and Venezuela. Males from Lower Amazonia (Obidos; Santarém; Rio Branco) are exactly intermediate between tristis (of Guiana and Venezuela) and niger (of Peru and adjacent parts of western Brazil). A series from Santarém is particularly instructive in this respect. The darkest specimen (Carnegie Museum, No. 73178) is hardly separable from certain individuals taken on the banks of the Rio Purús, while the male with the lightest under parts is even clearer gray than P. p. cinereiventris, being,

- Pachyrhamphus niger Taylor, Ibis, 1864, p. 87—Trinidad; Salvin, l.c., 1885, p. 302—Roraima; Sclater, Cat. B. Brit. Mus., 14, p. 343, 1888—part, spec. d-n, Bogotá, Valencia (Venezuela), Trinidad, Roraima (British Guiana), Cayenne, Pará; Cory, Auk, 10, p. 220, 1893—Tobago; Allen, Bull. Amer. Mus. N.H., 4, p. 55, 1892—El Pilar, Bermúdez, Venezuela; Chapman, l.c., 6, p. 47, 1894—Princestown, Trinidad; Dalmas, Mém. Soc. Zool. France, 13, p. 139, 1900—Tobago; Berlepsch and Hartert, Nov. Zool., 9, p. 56, 1902—Maipures, Caicara, Altagracía, and Ciudad

however, more distinctly freckled with white along the middle of the belly. Taken as a whole, birds from Amazonia east of the Rio Negro appear, however, nearer to the Guianan type, and the black phase, predominating on the Rio Solimões and west of the Rio Madeira, is only occasionally met with on the eastern stretches of the Amazon. Some specimens from northern Venezuela, notably one from Lagunita de Aroa, again closely approach the Santa Marta race (P. p. cinereiventris), thus forming the link to the western representatives of the group.

Material examined.—Northern Brazil: Santarém 8; Obidos 5; Rio Branco (Serra Caraumán and Bôa Vista) 2.—French Guiana (Cayenne and Mana River) 14.—British Guiana (Roraima) 4.—Venezuela (north coast from Sucre to Aroa; San Pedro, Caura Valley) 82.—Trinidad (Caparo, Aripo) 15.—Tobago 7.—"Bogotá" 5.

¹The type should be reexamined. Unfortunately, it was not among the specimens kindly forwarded to me by Dr. Simpson from the collection of the Liverpool Museum.

Bolívar, Río Orinoco, and Suapure, La Pricion, Caura, Venezuela; Cherrie, Mus. Brookl. Inst., Sci. Bull., I, p. 190, 1906—Aripo, Trinidad; Snethlage, Journ. - Pachyrhamphus cinereiventris (not of Sclater) Sclater and Salvin, P.Z.S. Lond., 1864, p. 361—Panama Railroad; Lawrence, Ann. Lyc. Nat. Hist.

on throat and foreneck. Wing (adult male) 72-74, (type) 73; tail 54-59, (type) 571/3; bill 13-14.

Recent reexamination of the type shows it to be a specimen of the north-Colombian race, although it represents the rather unusual variant with some blackish tinge on the anterior under parts.

Material examined.—Santa Marta region: Bonda 7; Fundación 4; Ciénaga 1; Santa Marta" (the type) 1.—Calamar, Bolívar 1; Gamarra, Magdalena 1.

¹Pachyramphus polychopterus similis CHERRIE, though nearly allied to P. p. cinereiventris, may be distinguished by slightly smaller size, and somewhat paler gray under parts in the male sex.

After examining a very large series from Nicaragua to Panama I fully agree with M. A. Carriker that the characters separating the birds of the Atlantic and Caribbean slopes are too unstable to justify the recognition of more than one form in Central America.

Pér., 2, p. 365, 1884-Peruvian localities; SALVIN, Ibis, 1885, p. 302-Bartica Grove, Merumé Mts., and Camacusa, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 347, 1888—part, spec. a-p, San Esteban, "Caracas," Bartica Grove, Merumé Mts., Camacusa, Oyapoc, "Cayenne," Chamicuros, Sarayacu, and Río Napo; BERLEPSCH, Journ. Orn., 37, p. 303, 1889-Yurimaguas, Peru; RIKER and CHAPMAN, Auk, 8, p. 25, 1891—Santarém; (?) ALLEN, Bull. Amer. Mus. N. H., 5, p. 110, 1893—Chapada, Matto Grosso; Goodfellow, Ibis, 1901, p. 710—Archidona, eastern Ecuador; Berlepsch and HARTERT, Nov. Zool., 9, p. 56, 1902-Munduapo, Río Orinoco, and Suapure and La Pricion, Caura; SNETHLAGE, Journ. Orn., 55, p. 291, 1907 -Pará and Ourém, Rio Guamá; idem, l.c., 56, p. 505, 1908-Goyana and Itaituba, Rio Tapajóz; PENARD and PENARD Vog. Guyana, 2, p. 156, 1910-Surinam; CHAPMAN, Bull. Amer. Mus. N.H., 36, p. 493, 1917-La Morelia, Colombia; CHUBB, Birds Brit. Guiana, 2, p. 275, 1921-various localities.

Range: French, Dutch, and British Guiana; Venezuela (Caura-Orinoco region; Sierra de Carabobo and San Esteban, Carabobo); the whole of Amazonia from northern Maranhão west to the eastern slopes of the Andes in Colombia, Ecuador, Peru, and Bolivia.

1: Brazil (Tury-assú, Maranhão 1).

Pachyramphus albogriseus albogriseus Sclater. Black-and-White Becard.

Pachyrhamphus albogriseus Sclater, P.Z.S.Lond., 25, p. 76, 1857—part, descr. of male only, Bogotá (type in British Museum examined); Sclater and Salvin, l.c., 1868, p. 168—Caracas, Venezuela; Sclater, Cat. B. Brit. Mus., 14, p. 347, 1888—part, descr. of male and spec. f,l, Bogotá, Mérida; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 128, 1890—part, Colombia, Venezuela.

Pachyrhamphus albogriseus albogriseus RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 836, 1907—part, Bogotá, Colombia, and Mérida and Caracas, Venezuela; HELLMAYR and SEILERN, Arch. Naturg., 78, A, Heft 5, pp. 90, 91, 1912—Cumbre de Valencia, Carabobo, Venezuela (crit., range).

Pachyrhamphus similis (not of CHERRIE), SALVIN, Nov. Zool., 2, p. 13, 1895—part, Mérida, Venezuela.

Range: North coast mountains of Venezuela, from Sucre to Caracas and Mérida, and west into the Eastern Andes of Colombia (Bogotá).¹

Pachyramphus albogriseus ornatus Cherrie.² Arcé's Becard.

Pachyrhamphus ornatus CHERRIE, Proc. U.S.Nat. Mus., 14, p. 338, 1891—Barranca, Costa Rica (=female); RIDGWAY, l.c., 16, p. 611, 1893—San José, Costa Rica (crit.); idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 842, 1907—Costa Rica (Barranca, San José) and Colombia (Valparaiso, Santa Marta region).

Pachyrhamphus albogriseus (not of Sclater) Salvin, P.Z.S.Lond., 1870, p. 199—Calovevora (Veragua) and Bugaba (Chiriqui); Sclater, Cat. B. Brit. Mus., 14, p. 347, 1888—part, spec. a-c, Nicaragua, Calovevora, Veragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 128, pl. 43, fig. 2 (male), 1890—part, Corinto (Nicaragua), Bugaba and Calovevora (descr. of male only).

Pachyrhamphus cinereiventris (not of SCLATER) ALLEN, Bull. Amer. Mus. N.H., 13, p. 154, 1900—part, Valparaiso, Santa Marta.

Pachyrhamphus albogriseus albogriseus RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 836, 1907—part, Nicaragua (Corinto), Panama (Calovevora, Chitrá, Bugaba), and Colombia (Santa Marta); CARRIKER, Ann. Carnegie Mus., 6, p. 666, 1910—Bebedero, Costa Rica (crit.).

Pachyrhamphus albogriseus ornatus Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 92, 1912—Boquete, Chiriquí (crit., range); Todd and Carriker, Ann. Carnegie Mus., 14, p. 324, 1922—Valparaiso, Santa Marta region (crit.).

Range: Western Nicaragua (Corinto), Costa Rica, western Panama (Bugaba, Boquete, Chitrá, Chiriquí; Calovevora, Veraguas), and northern Colombia (Valparaiso, Santa Marta region).

¹The type, while identical with Venezuelan males in coloration, is somewhat larger (wing 77, against 75; tail 62, against 59-60). The characters of both sexes have been fully set forth by Hellmayr and Seilern (l.c., p. 91).

Material examined.—Colombia: Bogotá (the type) 1.—Venezuela: Los Palmales, Bermúdez (now Sucre) 2; Galipán, Cerro del Avila, Distrito Federal 3; Cumbre de Valencia, Carabobo 8; Río Albarregas, Mérida 1.

²Pachyramphus albogriseus ornatus Cherrie: Adult male similar to P. a. albogriseus, but central rectrices grayish for the two basal thirds of their length; female with light markings on wings and tail much paler buffy yellow; pileum darker; under parts more greenish. Wing 75, (female) 72; tail 55-58; bill 13.

Material examined.—Panama: Boquete 2; Calovevora 1.

²The female figured on the same plate (fig. 3) belongs to some other species.

Pachyramphus albogriseus subsp. Ecuadorian Becard.

- Callopsaris albogriseus (not of SCLATER) TACZANOWSKI, P.Z.S.Lond., 1877, p. 327—Lechugal, Río Zurumilla, prov. Túmbez, Peru.
- Pachyrhamphus albogriseus Berlepsch and Taczanowski, P.Z.S.Lond., 1883, p. 559—Chimbo; idem, l.c., 1885, p. 93—Mapoto, Ecuador; Taczanowski, Orn. Pér., 2, p. 361, 1884—part, Lechugal; Hartert, Nov. Zool., 5, p. 489, 1898—Chimbo; Goodfellow, Ibis, 1901, p. 710—Archidona (spec. examined).¹
- Pachyrhamphus similis (not of SALVIN?) SALVADORI and FESTA, Boll. Mus. Zool. Torino, 14, No. 362, p. 16, 1899—Río Peripa, Ecuador.
- Pachyrhamphus albogriseus similis HARTERT, Nov. Zool., 9, p. 609, 1902—Chimbo, San Javier (Esmeraldas), and Archidona (spec. examined).
- Pachyrhamphus albogriseus salvini (not of RICHMOND?) CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 543, 1926—Mindo, Chongoncito, Daule, Guayaquil, Puna Island, Punta Santa Ana, Zamora, below Oyacachi, and below San José, Ecuador.

Range: Tropical Zone of Ecuador and extreme northwestern Peru (Lechugal, Río Zurumilla, prov. Túmbez).²

*Pachyramphus albogriseus salvini Richmond. SALVIN'S BECARD.

- Pachyrhamphus similis (not of CHERRIE, 1891) SALVIN, Nov. Zool., 2, p. 13, 1895—part, Chusgon (type), Viña, Succha, and Malca (Huamachuco), dept. Cajamarca, Peru.
- Pachyrhamphus salvini RICHMOND, Auk, 16, p. 186, 1899—new name for Pachyrhamphus similis SALVIN, preoccupied.
- Pachyrhamphus albogriseus salvini HELLMAYR and SEILERN, Arch. Naturg., 78, A, Heft 5, p. 92, 1912—northern Peru (crit., char.).
- Pachyrhamphus albogriseus (not of Sclater) Taczanowski, P.Z.S.Lond., 1879, p. 236—Tambillo and Guajango; idem, l.c., 1880, p. 203—Callacate; idem, Orn. Pér., 2, p. 361, 1884—part, Tambillo, Guajango, Callacate.

¹The male brought back by Goodfellow, now in the Tring Museum, is wrongly labeled "Archidona, Ecuador, April, 1899." It is one of O. T. Baron's skins of *P. a. salvini* from northern Peru, as its unmistakable "make" clearly shows.

²Owing to lack of sufficient material, I am unable to determine to what form birds from Ecuador should be referred. A single adult male from Chimbo is much like *P. a. ornatus*, but smaller, with shorter white tips to the rectrices, and lacks the black loral spot; while a female from San Javier, prov. Esmeraldas, differs only by its smaller dimensions. In size of bill, both these specimens are intermediate between *P. a. ornatus* and *P. a. salvini*. Chapman refers the Ecuadorian form to *P. a. salvini*, but apparently had no Peruvian material for comparison. In opposition to his statement, the San Javier female has the throat yellow, not white.

Wing (male) 68, (female) 65; tail 51, (female) 54; bill 13.

³Pachyramphus albogriseus salvini RICHMOND: Much like P. a. ornatus, but apical spots of median upper wing coverts much smaller, and bill shorter as well as slenderer; back of adult female somewhat duller, more of a grayish olive tone. Wing 73-75, (female) 69-72; tail 57-63, (female) 55-60; bill 10½-12.

Material examined.—Peru: Viña, Huamachuco 4; Chusgon 1; Malca 2; Poco Tambo 1; Guajango 1.

Range: Northern Peru, in depts. of Cajamarca and San Martín (Chusgon, Viña, Succha, and Malca, near Huamachuco; Poco Tambo, east of Uchco; Tambillo; Callacate; Guajango, Río Marañón).

- 1: Peru (Poco Tambo, east of Uchco 1).
- *Pachyramphus major australis Miller and Griscom. I NICARAGUAN BECARD.
 - Pachyrhamphus major australis MILLER and GRISCOM, Amer. Mus. Novit., 159, p. 3, 1925—San Rafael del Norte, Nicaragua.
 - Pachyrhamphus major (not of Cabanis) Sclater and Salvin, Ibis, 1860, p. 36—Cobán, Guatemala; Sclater, Cat. B. Brit. Mus., 14, p. 346, 1888—part, spec. i-q, Choctum, Cobán, Vera Paz, Medio Monte, Calderas, and Dueñas, Guatemala; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 127, 1890—part, Guatemala.
 - Pachyrhamphus major major RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 833, 1907—part, Guatemala.

Range: Guatemala, Honduras, and eastern Nicaragua (San Rafael del Norte; Arenal district, Matagalpa).

3: Guatemala (Petén 1, unspecified 2).

Pachyramphus major² major (Cabanis). MEXICAN BECARD.

Bathmidurus major Cabanis, Arch. Naturg., 13, (1), p. 246, 1847—Xalapa, Vera Cruz, Mexico (type in Heine Collection; descr. of female); Baird, Rep. Pacific R. R. Surv., 9, p. 165, 1858—Boquillo, Nuevo León; idem, Birds N. America, p. 166, pl. 47, fig. 2 (female), 1860—Boquillo; idem, Rep. U. S. and Mex. Bound. Surv., 2, Part 2, p. 7, pl. 19, fig. 2, 1859—Boquillo; Cabanis and Heine, Mus. Hein., 2, p. 89, 1859—Jalapa; Sumichrast, Mem. Boston Soc. N.H., 1, p. 558, 1869—Vera Cruz.

Pachyrhamphus marginatus major KAUP, P.Z.S.Lond., 19, "1851," p. 48, Oct., 1852 (diag.).

Pachyramphus major australis MILLER and GRISCOM: "Resembling typical P. m. major (CABANIS) of eastern Mexico, but adult male with interscapular region with much less black, and slightly paler below, in these respects intermediate between typical major and P. m. itzensis of Yucatán; female much darker than in major, cinnamon-rufous above rather than light buff-tawny, the yellow tinge beneath more marked; size slightly smaller than major, larger than itzensis." (MILLER and GRISCOM, Amer. Mus. Novit., 159, p. 3, 1925).

In the absence of typical major from eastern Mexico I cannot add anything to this description. An adult female from Volcán de Puca, Honduras, collected by E. Wittkugel on March 7, 1889, I found to be identical with others from Guate-

mala.

²Pachyramphus major is possibly conspecific with P. albogriseus. In view of the very differently colored female, however, it does not seem desirable to reduce its rank, until we acquire a better knowledge of its range in Nicaragua, where it is expected to meet P. albogriseus ornatus.

Pachyrhamphus marginatus (?) (not Todus marginatus LICHTENSTEIN) SCLATER, P.Z.S.Lond., 24, p. 298, 1856—Cordova, Vera Cruz.

Pachyrhamphus major Sclater, P.Z.S.Lond., 25, p. 78, 1857—Jalapa, Mexico (descr. of male and female); idem, l.c., p. 204, 1857—Jalapa; idem, l.c., 26, p. 97, 1858—southern Mexico; idem, l.c., 27, p. 366, 1859—Jalapa; idem, l.c., 1864, p. 176—near Mexico City; idem, Cat. B. Brit. Mus., 14, p. 346, 1888—part, spec. a-f, near Mexico City and Jalapa, Mexico; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 127, 1890—part, Mexico City, Sierra Madre above Ciudad Victoria, Jalapa, and Huatusco, Mexico; Chapman, Bull. Amer. Mus. N.H., 10, p. 32, 1898—Jalapa, Vera Cruz.

Pachyrhamphus major major RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 833, 1907—part, eastern' Mexico (monog.); Bangs and Peters, Bull. Mus. Comp. Zool., 67, p. 478, 1927—Presidio, Vera Cruz.

Range: Eastern Mexico, in states of Nuevo León, Tamaulipas, Vera Cruz, Puebla, Mexico, and Oaxaca.

Pachyramphus major uropygialis Nelson. SINALOA BECARD.

Pachyrhamphus major uropygialis Nelson, Auk, 16, p. 28, 1899—Plomosas, Sinaloa; Ridgway, Bull. U.S.Nat. Mus., 50, Part 4, p. 836, 1907—western Mexico (monog.).

Pachyrhamphus major (not of CABANIS) SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 127, 1890—part, Amula, Guerrero.

Range: Western Mexico, in states of Sinaloa (Plomosas) and Guerrero (Amula).

*Pachyramphus major itzensis Nelson. Yucatán Becard.

Pachyrhamphus major itzensis Nelson, Proc. Biol. Soc. Wash., 14, p. 173, 1901—Chichen-Itza, Yucatán; Cole, Bull. Mus. Comp. Zool., 50, p. 134, 1906—Chichen-Itza; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 836, 1907—Yucatán (monog.); Bangs and Peck, Proc. Biol Soc. Wash., 21, p. 44, 1908—Toledo District, British Honduras (crit.); Griscom, Amer. Mus. Novit., 235, p. 15, 1926—Chunyaxche, Quintana Roo.

Pachyrhamphus major (not of Cabanis) Boucard, P.Z.S.Lond., 1883, p. 449—Izalam, Tizimín, and Río Lagartos, Yucatán; Sclater, Cat. B. Brit. Mus., 14, p. 346, 1888—part, spec. g, h, northern Yucatán; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 127, 1890—part, Peto and Buctzotz, Yucatán.

Range: Yucatán (Chichen-Itza; Calatmul; Izalam; Tizimín; Río Lagartos; Peto; Buctzotz), Quintana Roo (Chunyaxche), and British Honduras (Toledo District).

1: Yucatán (Izalam 1).

Genus PLATYPSARIS Sclater.1

- Platypsaris Sclater, P.Z.S.Lond., 25, p. 72, 1857—type by subs. desig. (Sclater, Cat. B. Brit. Mus., 14, p. 333, 1888) Pachyrhynchus aglaiae LAFRESNAYE.
- Pachyrhamphus (not of CABANIS, 1847) KAUP, P.Z.S.Lond., 19, "1851," p. 45, Oct., 1852—for Lanius validus LICHT. [= Tityra rufa VIEILLOT], Pachyrhamphus nigrescens CAB., Pachyrhynchus pectoralis SWAINSON [=Querula minor LESSON], and Pachyrhynchus aglaiae LAFRESNAYE; no genotype specified.
- Hadrostomus Cabanis and Heine, Mus. Hein., 2, p. 84, 1859—new name for Pachyrhamphus Kaup; type by subs. desig. (Sclater, Cat. B. Brit. Mus., 14, p. 333, 1888) Tityra atricapilla Vieillot = Tityra rufa Vieillot.

*Platypsaris rufus rufus (Vieillot). CRESTED BECARD.

- Tityra rufa VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 3, p. 347, 1816—based on Azara, No. 208, Paraguay; =female.
- Tityra atricapilla Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 3, p. 347, 1816—based on Azara, No. 209, Paraguay; =immature male.
- Lanius validus Lichtenstein, Verz. Dubl. Berliner Mus., p. 50, 1823—São Paulo (descr. of adult and immature male).
- Pachyrhynchus cinerascens Spix, Av. Bras., 2, p. 34, pl. 46, fig. 1, 1825—no locality stated (type lost; =immature male).
- Psaris cristatus SWAINSON, Zool. Journ., 2, No. 7, p. 355, Oct., 1825—southern part of Brazil (=adult male); idem, Zool. Illust., (2nd ser.), 1, Part 9, pl. 41, 1830—"from the mining provinces of Brazil" (=adult male).
- Tityra pileata JARDINE and SELBY, Illust. Ornith., 1, Part 2, pl. 17, June, 1827—South America (=adult female).
- Psaris strigatus Swainson, Anim. Menag., p. 287, Dec., 1837—Brazil (descr. of young male).
- Pachyrynchus megacephalus Swainson, Anim. Menag., p. 287, Dec., 1837—Brazil (descr. of immature male).
- Psaris atricapillus Lafresnaye and D'Orbigny, Syn. Av., I, in Mag. Zool., 7, cl. 2, p. 42, 1837—Chiquitos, Bolivia (spec. in Paris Museum examined).
- Psaris roseicollis D'Orbigny, Voyage Amér. Mérid., Ois., p. 302, 1839—part, descr. of "young male," Chiquitos, Bolivia.
- Psaris affinis Lesson, Rev. Zool., 3, p. 354, 1840—Brazil (descr. of male). Psaris validus KAUP, P.Z.S.Lond., 19, "1851," p. 46, Oct., 1852 (crit.).
- Pachyrhamphus validus CABANIS, Arch. Naturg., 13, (1), p. 240, 1847—Brazil (synonymy); Burmeister, Syst. Übers. Th. Bras., 2, p. 455, 1856
- ¹This genus is barely separable from Pachyramphus GRAY.
- ²Platypsaris Bonaparte (Ann. Sci. Nat., (4), Zool., 1, p. 134, 1854) is a nomen nudum. Gray (Cat. Gen. Subgen. Birds, p. 146, 1855) quotes for "Platypsaris Bp. 1854" as type "Psaris latirostris? Pr. B.," but the question mark makes it doubtful whether this action constitutes a valid designation under the rules.

—Sete Lagôas, Minas Geraes; Sclater, P.Z.S.Lond., 25, p. 72, 1857—São Paulo (monog.).

"Pachyramphus validus seu leucoptilon (LICHT.)" (sic) DES MURS in CASTELNAU, Expéd. Amér. Sud, Ois., p. 54, 1856—Brazil (descr. of female).

Hadrostomus atricapillus Cabanis and Heine, Mus. Hein., 2, p. 84, 1859—Brazil (synonymy); Pelzeln, Orn. Bras., 2, p. 120, 1868—part, Rio de Janeiro, Sapitiba, Taipa, Mattodentro, Goyaba, Ypanemá (São Paulo), Curytiba and Castro (Paraná), Rio dos Piloens, Goyaz (spec. examined); Berlepsch, Journ. Orn., 35, p. 13, 1887—Lambaré, Paraguay; Sclater, Cat. B. Brit. Mus., 14, p. 333, 1888—Bahia and "Pelotas, Rio Grande do Sul," Brazil; Allen, Bull. Amer. Mus. N.H., 5, p. 110, 1893—Chapada, Matto Grosso; Salvadori, Boll. Mus. Zool. Torino, 10, No. 208, p. 11, 1895—Colonia Risso, Paraguay; Ihering, Rev. Mus. Paul., 3, p. 211, 1899—Piquete and Iguapé, São Paulo; Reiser, Denks. Math.-naturw. Kl. Ak. Wiss. Wien, 76, p. 70, 1910; p. 153, 1925—Pedrinha, Piauhy.

Hadrostomus rufus Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 669, 1906 (crit.); Ihering and Ihering, Cat. Faun. Braz., 1, p. 306, 1907—Piquete, Iguapé, Ubatuba, Barretos, and Itapira (São Paulo), Bahia, and Rio Doce, Espirito Santo; Lillo, Apunt. Hist. Nat., 1, p. 42, 1909—Ocampo, Santa Fé; Chubb, Ibis, 1910, p. 602—Sapucay, Paraguay.

Hadrostomus rufa rufa Hartert and Venturi, Nov. Zool., 16, p. 204, 1909—Ocampo and Mocovi, Santa Fé.

Platypsaris rufus Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 310, 1910—Ocampo and Mocovi; idem, Bol. Soc. Physis, 1, p. 348, 1914—same localities.

Platypsaris atricapillus GRANT, Ibis, 1911, p. 125-Cabo Emma, Paraguay.

Platypsaris rufus rufus Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 23, p. 320, 1912—San Rafael, Paraguay; Hellmayr, Nov. Zool., 32, p. 15, 1925—Chiquitos, Bolivia (crit.); SZTOLCMAN, Ann. Zool Mus. Pol. Hist. Nat., 5, p. 180, 1926—Marechal Mallet and Rio Claro, Paraná; Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 339, 1929—Ibiapaba and Deserto, Piauhy and Juá, Ceará.

Range: Campo region of Brazil, from Santa Catharina, Paraná, and Matto Grosso north to Ceará and Piauhy, and adjacent sections of Paraguay, Argentina (prov. of Santa Fé), and eastern Bolivia (Chiquitos).¹

¹I cannot make out *Hadrostomus atricapillus surinamensis* Penard and Penard (Vog. Guyana, 2, p. 152, 1910—Surinam) which, the authors state, is apparently identical with the Brazilian bird. The only species seen from the Guianas is the pink-chested *P. minor*, and I strongly doubt the occurrence of *P. r. rufus* in Surinam.

A single adult male from Chiquitos, Bolivia agrees with others from Brazil.

Material examined.—Piauhy: Deserto 3, Ibiapaba 5, Pedrinha, near Parnaguá 1.—Ceará: Juá, near Iguatú 1.—Bahia 3.—Goyaz: Rio dos Piloens 1, Amaroleite 2.—Rio de Janeiro: Sapitiba 1, Rio 1.—São Paulo: Iguapé 2, Mattodentro 2, Ipanemá 2, Goyaba 1, Taipa 1.—Paraná: Castro 1, Curityba 3.—Bolivia: Chiquitos 1.

10: Brazil (Bahia 1; Juá, near Iguatú, Ceará 1; Deserto, Piauhy 3; Ibiapaba, Piauhy 5).

*Platypsaris rufus audax (Cabanis). Bold Becard.

- Hadrostomus audax Cabanis, Journ. Orn., 21, p. 68, 1873—Monterico, dept. Ayacucho, Peru; Taczanowski, P.Z.S.Lond., 1874, p. 540—Monterico; idem, Orn. Pér., 2, p. 356, 1884—Monterico; Berlepsch and Stolzmann, Ornis, 13, p. 90, 1906—Casinchihua, Urubamba, dept. Cuzco, Peru.
- Platypsaris atricapillus (not Tityra atricapilla VIEILLOT) LILLO, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 8, p. 188, 1902—Tucumán, Tafi Viejo, and La Hoyada, Argentina; BAER, Ornis, 12, p. 221, 1904—La Criolla, Tucumán.
- Hadrostomus rufus audax HARTERT and VENTURI, Nov. Zool., 16, p. 205, 1909—La Hoyada and Las Cuchillas, Tucumán, Argentina.
- Platypsaris audax Lillo, Rev. Letr. Cienc. Soc., 3, p. 51, 1905—Tucumán, Tafi Viejo, and La Hoyada; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 310, 1910—La Hoyada; Chapman, Bull. U.S.Nat. Mus., 117, p. 99, 1921—midway between Torontoy and San Miguel Bridge, Urubamba, Peru.
- Hadrostomus rufus audax Giacomelli, El Hornero, 3, p. 72, 1923—Santa Cruz, Río Saladillo, La Rioja.

Range: Tropical Zone of southern Peru (Monterico, dept. Ayacucho; Casinchihua and between Torontoy and San Miguel Bridge, Urubamba, dept. Cuzco), central Bolivia (Samaipata, western Santa Cruz), and northwestern Argentina (in prov. of Salta Tucumán, and La Rioja).

1: Argentina (Las Cuchillas, Tucumán 1).

*Platypsaris homochrous homochrous (Sclater). One-colored Becard.

Pachyrhamphus homochrous SCLATER, P.Z.S.Lond., 27, p. 142, 1859—Pallatanga, Ecuador (descr. of male and female); idem, l.c., 28, p. 279, 1860—

¹Platypsaris rufus audax (CABANIS): Adult male similar to P. r. rufus, but back much darker, blackish rather than sooty gray, without any buffy tinge on rump and tail coverts; under parts dingy grayish instead of deep buff, only the under tail coverts slightly washed with dull buffy; axillars and under wing coverts much paler, buffy grayish rather than deep buff, approaching ochraceous buff; female not distinguishable from that of its Brazilian ally. Wing 98-104, (female) 96-98; tail 67-75.

Specimens from Samaipata, Bolivia, agree with a series from western Argentina. No Peruvian material is available for comparison.

Material examined.—Argentina, prov. Tucumán: Las Cuchillas 3, La Hoyada 2, Tucumán 2; Río Bermejo, Salta 1.—Bolivia: Samaipata, alt. 1500 meters, 4.

²Platypsaris homochrous is of doubtful affinity. The adult male has a very short, narrow second primary, while the female may be recognized from every other species by having the whole pileum tawny rufous like the back.

Babahoyo; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 7, p. 473, 1862—Lion Hill, Panama; Sclater and Salvin, P.Z.S.Lond., 1864, p. 362—Panama Railroad (ex Lawrence).

Hadrostomus homochrous Sclater, Cat. Coll. Amer. Birds, p. 240, 1862—Pallatanga and Babahoyo, Ecuador; Taczanowski, P.Z.S.Lond., 1877, p. 326—Lechugal, Túmbez, Peru; (?) Sclater and Salvin, l.c., 1879, p. 517, pl. 42, fig. 12—Remedios, Antioquia, Colombia (nest and eggs described); Taczanowski and Berlepsch, l.c., 1885, p. 93—Yaguachi, Ecuador; Taczanowski, Orn. Pér., 2, p. 357, 1884—Lechugal, Peru; Sclater, Cat. B. Brit. Mus., 14, p. 334, pl. 24, 1888—part, spec. a-l,n, Pallatanga, Babahoyo, Santa Rita, "Monji," Balzar, "Sarayacu," Lechugal, Panama; Hartert, Nov. Zool., 5, p. 489, 1898—Chimbo, Ecuador; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 16, 1899—Río Peripa and Vinces, Ecuador; Goodfellow, Ibis, 1901, p. 710—Santo Domingo and Guanacillo, Ecuador.

Platypsaris homochrous RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 859, 1907—part, (?) eastern Panama, (?) Remedios (Antioquia), western Ecuador, and Lechugal, northern Peru (monog.); Hellmayr, P.Z.S. Lond., 1911, p. 1143—Nóvita, Condoto, and Tadó, Pacific Colombia.

Platypsaris homochrous homochrous Chapman, Bull. Amer. Mus. N.H., 36, p. 490, 1917—Nóvita, Colombia; idem, l.c., 55, p. 540, 1926—Esmeraldas, Manaví, Daule, Durán, Bucay, Santa Rosa, Zaruma, and Alamor, western Ecuador.

Range: Tropical Zone of (?) eastern Panama (Railroad line), western Colombia, and western Ecuador south to extreme northwestern Peru (Lechugal, Río Zurumilla, dept. Túmbez).²

2: Ecuador (Pambílar, prov. Esmeraldas 1; Milagro, prov. Guayas 1).

Platypsaris homochrous canescens Chapman.³ Santa Marta Onecolored Becard.

Platypsaris homochrous canescens Chapman, Bull. Amer. Mus. N.H., 31, p. 155, 1912—"Cagualito" = Cacagualito, Santa Marta Mts., Colombia;

¹This reference may pertain to P. h. canescens.

²Specimens from Pacific Colombia are identical with others from Ecuador. No material from Panama is available. According to Chapman (Bull. Amer. Mus. N.H., 31, p. 155, 1912), a single adult male examined by him probably represents a separate race.

Material examined.—Ecuador: Vinces 2; Chimbo 2; Milagro 1; Pambílar, Esmeraldas 3; Yaguachi 1.—Colombia: Potedo, Chocó 2; Andagoya, Chocó 2; Quibdó, Río Atrato 3; Nóvita 3; Condoto 1; Tadó 1; Murindo, Antioquia 1.

³Platypsaris homochrous canescens Chapman: Similar to P. h. homochrous, but adult male decidedly paler gray underneath, and the back slate gray, contrasting with the black of the pileum. Wing 85-88; tail 62-64.

Two males from Jaraquiel, dept. Bolívar, are somewhat darker above, thereby approaching certain worn specimens of typical homochrous.

Material examined.—Fundación 5; Cacagualito 1; Mamatoco 2; Dibulla 1; Don Diego 2; Calamar, lower Magdalena 2; Gamarra, Magdalena 1; Jaraquiel, Bolívar 3.

Todd and Carriker, Ann. Carnegie Mus., 14, p. 324, 1922—Bonda, Cacagualito, Mamatoco, Fundación, Don Diego, and Dibulla, Santa Marta region (spec. examined).

Hadrostomus homochrous SCLATER, Cat. B. Brit. Mus., 14, p. 334, 1888—part, spec. m, Santa Marta; ALLEN, Bull. Amer. Mus. N.H., 13, p. 154, 1900—Cacagualito and Bonda.

Platypsaris homochrous RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 859, 1907—part, Santa Marta, Bonda, and Cacagualito.

Range: Northern Colombia, in depts. of Magdalena (Gamarra, Río Magdalena; Santa Marta district) and Bolívar (Calamar, Río Magdalena; Jaraquiel).¹

Platypsaris minor (Lesson). Lesser Becard.

Querula minor Lesson, Traité d'Orn., livr. 5, p. 363, end of 1830—Cayenne (descr. of immature male); Pucheran, Arch. Mus. Hist. Nat. Paris, 7, livr. 3, p. 366, 1855 (crit.).

Psaris roseicollis LAFRESNAYE and D'ORBIGNY, Syn. Av., I, in Mag. Zool., 7, cl. 2, p. 42, 1837—Guarayos and Yuracares, Bolivia (type in Paris Museum examined; =adult male); D'ORBIGNY, Voyage Amér. Mérid., Ois., p. 302, 1839—part, descr. of adult male, Yuracares and Guarayos; JARDINE and SELBY, Illust. Orn., n. ser., Part 5, pl. 28 (=adult male), March, 1839—locality unknown.

Pachyrynchus pectoralis Swainson, Anim. Menag., p. 288, Dec., 1837—Cayenne (descr. of immature male).

Pachyramphus atricilloides Des Murs in Castelnau, Expéd. Amér. Sud, Ois., p. 55, in text, June, 1856—Cavallo-Coche, Peru (descr. of female).

Pachyrhamphus minor Cabanis, Arch. Naturg., 13, (1), p. 241, 1847—part, Bolivia.

Psaris pectoralis KAUP, P.Z.S.Lond., 19, "1851," p. 46, Oct., 1852 (diag.).

Pachyrhamphus pectoralis Sclater, P.Z.S.Lond., 25, p. 18, 1857—Bogotá; idem, l.c., 25, p. 73, 1857—Cayenne and Bogotá (crit.).

Pachyrhamphus roseicollis Sclater, P.Z.S.Lond., 25, p. 73, 1857—Bolivia (crit.).

Hadrostomus roseicollis Cabanis and Heine, Mus. Hein., 2, p. 85, 1859—Bolivia (ex d'Orbigny).

Hadrostomus minor Cabanis and Heine, Mus. Hein., 2, p. 85, 1859—Cayenne and Colombia; Sclater and Salvin, P.Z.S.Lond., 1866, p. 190—upper Ucayali, Peru; idem, l.c., 1867, p. 579—Pará; Pelzeln, Orn. Bras.,

'Two specimens from western Venezuela (state of Zulia) in Field Museum cannot properly be referred to any known form. The adult male, taken by H. T. Raven on October 20, 1910, at Catatumbo, is very nearly as dark above as P. h. homochrous from the Pacific coast, while the under parts are even a shade deeper gray. An immature male (with rufous wings and tail), secured by W. H. Osgood and H. B. Conover on March 1, 1920, on the Río Cogollo, eastern base of the Sierra de Perijá, however, can be closely matched by a specimen (in corresponding plumage) of P. h. canescens from Mamatoco, Santa Marta.

Additional material is required to establish the status of the Venezuelan race.

2, p. 120, 1868—Engenho do Cap. Gama, western Matto Grosso: SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 284-upper Ucayali, Peru; idem, l.c., 1879, p. 617—Yuracares and Guarayos, Bolivia; TACZANOWSKI, l.c., 1882, p. 23-Yurimaguas, Peru; idem, Orn. Mus., 14, p. 337, 1888—Cavenne, Camacusa, Bartica Grove, Pará, Chamicuros, Iquitos, upper Ucayali, Samiria, Sarayacu (Ecuador), Bogotá; RIKER and CHAPMAN, Auk, 8, p. 25, 1891—Santarém; Goodfellow, Ibis, 1901, p. 710—Archidona, Ecuador: Berlepsch and Hartert, Nov. Zool., 9, p. 56, 1902—Suapure, Caura, Venezuela; IHERING and IHERING, Cat. Faun. Braz., 1, p. 307, 1907-range; Hellmayr, Nov. Zool., 14, p. 51, 1907-Teffé, Rio Solimões; idem, l.c., 17, p. 313, 1910-Calama and Las Onças, Manicoré, Rio Madeira; Berlepsch, l.c., 15, p. 140, 1908—Cayenne; Snethlage, Journ. Orn., 55, p. 290, 1907—Pará; idem, l.c., 56, p. 13, 1908—Cachoeira, Bom Lugar, and Ponto Alegre, Rio Purús; idem, l.c., p. 529, 1908—Arumatheua, Rio Tocantins; PENARD and PENARD, Vog. Guyana, 2, p. 152, 1910-Surinam.

Hadrostomus atricapillus (not Tityra atricapilla VIEILLOT) PELZELN, Orn. Bras., 2, p. 120, 1868—part, Pará (spec. examined); SNETHLAGE, Journ. Orn., 55, p. 290, 1907—Pará (one female).

Platypsaris rufus (not Tityra rufa Vieillot) Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 90, 1912—Pará (crit.).

Platypsaris minor Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 33, 90, 1912—Ipitinga and Pará, Pará; Snethlage, Bol. Mus. Goeldi, 8, p. 349, 1914—Pará, Providencia, Peixe-Boi, Rio Tocantins (Baião, Arumatheua), Rio Tapajóz (Villa Braga, Pimental), Rio Purús (Cachoeira, Bom Lugar, and Ponto Alegre); Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 251, 1916—Caura River, Venezuela; Beebe, Zoologica (N.Y.), 2, p. 93, 1916—Utinga, Pará; Chapman, Bull. Amer. Mus. N.H., 36, p. 490, 1917—La Morelia and Florencia, Caquetá, Colombia; Bangs and Penard, Bull. Mus. Comp. Zool., 62, p. 70, 1918—Lelydorp, Surinam; Chubb, Birds Brit. Guiana, 2, p. 269, 1921—various localities; Hellmayr, Nov. Zool., 32, p. 16, 1925—Guarayos, Bolivia (note on d'Orbigny's type); Chapman, Bull. Amer. Mus. N.H., 55, p. 540, 1926—Río Suno, Ecuador; Snethlage, Bol. Mus. Nac. Rio de Janeiro, 2, No. 6, p. 63, 1926—Turyassú, Maranhão; Stone, Proc. Ac. Nat. Sci. Phila., 80, p. 168, 1928—Pará.

Range: The whole Guianan-Amazonian forest region from northern Maranhão (Tury-assú), the estuary of the Amazon, and French Guiana west to the eastern slope of the Andes in Colombia, Ecuador, and Peru, south to northern Bolivia (Yuracares; Guarayos; Río Yapacani and Buenavista, dept. Santa Cruz) and western Matto Grosso (Engenho do Gama, Rio Guaporé).

¹There is no racial variation in this widespread species, except that males from south of the Amazon are on the average rather paler, more grayish. Females exhibit a wide amount of individual variation in color. The extremes are represented by a specimen from Pará (Carnegie Museum, No. 44093) with mainly

*Platypsaris aglaiae aglaiae (Lafresnaye). Rose-throated Becard.

Pachyrhynchus aglaiae LAFRESNAYE, Rev. Zool., 2, p. 98, 1839—Mexico.1

Platypsaris affinis (not Psaris affinis Lesson) Elliot, Ibis, 1, p. 394, pl. 13, 1859—Mexico; Sclater, P.Z.S.Lond., 27, p. 366, 1859—Jalapa (crit.).

Hadrostomus aglaiae (not Pachyrhynchus aglaiae LAFRESNAYE) SCLATER and SALVIN, P.Z.S.Lond., 1870, p. 837—Honduras; SCLATER, Cat. B. Brit. Mus., 14, p. 335, 1888—part, Honduras; SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 121, 1890—part, San Pedro, Honduras.

Platypsaris aglaiae Cherrie, Proc. U.S.Nat. Mus., 14, p. 535, 1891—Jiménez, Costa Rica.

Range: Atlantic slope of Honduras (San Pedro Sula; Santa Ana; Ceiba), Nicaragua, and extreme northeastern Costa Rica (Jiménez; El Hogar).

*Platypsaris aglaiae latirostris (Bonaparte). Broad-Billed Becard.

Pachyrhamphus latirostris Bonaparte, Compt. Rend. Ac. Sci., 38, p. 658, 1854—Nicaragua; idem, Not. Coll. Ornith. Delattre, p. 87, 1854—Nicaragua; Sclater, P.Z.S.Lond., 25, p. 74, 1857—Nicaragua (monog.).

Hadrostomus aglaiae (not Pachyrhynchus aglaiae Lafresnaye) Cabanis, Journ. Orn., 9, p. 252, 1861—Lepanto, Gulf of Nicoya, Costa Rica; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 9, p. 116, 1868—Costa Rica (ex Cabanis); Sclater, Cat. B. Brit. Mus., 14, p. 335, 1888—part, spec. c'-e', Nicaragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 121, 1890—part, Nicaragua and Costa Rica.

Hadrostomus homochrous? (not of SCLATER) RIDGWAY, Proc. U.S.Nat. Mus., 5, p. 397, 1882—La Palma de Nicoya, Costa Rica.

Hydrostomus (typog. error) latirostris RIDGWAY, Proc. U.S.Nat. Mus., 6, p. 393, 1884—Ometepe, Lake Nicaragua, Nicaragua (crit.).

Platypsaris latirostris RIDGWAY, Proc. U.S.Nat. Mus., 14, pp. 468, 469, 474, in text, 1891—Ometepe, Nicaragua and La Palma de Nicoya, Costa Rica.

Platypsaris aglaiae latirostris Ridgway, Proc. U.S.Nat. Mus., 14, pp. 468, 469, 1891—Ometepe, Nicaragua; idem, l.c., 16, p. 612, in text, 1893—La Palma de Nicoya, Costa Rica; idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 855, 1907—Pacific slope of Costa Rica, Nicaragua, and Salvador (monog.); Bangs, Proc. Biol. Soc. Wash., 22, p. 32, 1909—Bolson, Costa Rica; Carriker, Ann. Carnegie Mus., 6, p. 664, 1910—Bolson, Costa Rica.

Range: Pacific slope of Salvador (west to Salvador City), Nicaragua (Ometepe; San Gerónimo, Chinandega), and Costa Rica (Bolson; La Palma de Nicoya and Lepanto, Gulf of Nicoya).

5: Nicaragua (San Gerónimo, Chinandega 5).

*Platypsaris aglaiae albiventris (Lawrence). XANTUS'S BECARD.

Hadrostomus albiventris Lawrence, Ann. Lyc. Nat. Hist. N.Y., 8, p. 475, 1867—Plains of Colima, Colima, Mexico; idem, Mem. Bost. Soc. N.H., 2, p. 289, 1874—Mazatlán, Sinaloa, and plains of Colima; Sclater, Cat. B. Brit. Mus., 14, p. 335, 1888—Presidio, Sinaloa.

- (?) Pachyrhamphus aglaiae (not of LAFRESNAYE) SCLATER, P.Z.S.Lond., 25, p. 74, 1857—part, Coahuila.
- Hadrostomus aglaiae LAWRENCE, Bull. U.S.Nat. Mus., 4, p. 28, 1876—Dondominguillo, Oaxaca; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 121, 1890—part, localities in Sonora, Jalisco, Colima, and Guerrero.
- Platypsaris albiventris PRICE, Auk, 5, p. 425, 1888—Huachuca Mts., Arizona; Jouy, Proc. U.S.Nat. Mus., 16, p. 783, 1893—Barranca Ibarra, Jalisco; Miller, Bull. Amer. Mus. N.H., 21, p. 356, 1905—Escuinapa, Sinaloa; Swarth, Pacific Coast Avif., 4, p. 20, 1904—Huachuca Mts., Arizona.
- Platypsaris aglaiae albiventris RIDGWAY, Proc. U.S.Nat. Mus., 14, p. 469, 1891—western Mexico; Nelson, North Amer. Faun., 14, p. 57, 1899—west coast of Mexico from the Isthmus of Tehuantepec to Arizona; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 856, 1907—Pacific slope of Mexico, northward into southern Arizona; SWARTH, Pacific Coast Avif., 10, p. 40, 1914—Huachuca Mts., Arizona.

Range: Pacific slope of Mexico, in states of Chihuahua, Sonora, Sinaloa, Jalisco, Michoacán, Morelos, Colima, Guerrero, and Oaxaca (Dondominguillo), and Nayarit (Tepic), northward into southern Arizona (Ramsey Canyon, Huachuca Mountains), eastward (?) to Coahuila and Nuevo León (Cerro de la Silla).

11: Mexico (Chihuahua 1; Presidio, near Mazatlán, Sinaloa 1; Tuxpam, Jalisco 6; Colima 3).

Platypsaris aglaiae insularis Ridgway. Tres Marias Becard.

- Platypsaris insularis RIDGWAY, Man. N. Amer. Birds, p. 325, 1887—Tres Marías Islands, western Mexico.
- Hadrostomus aglaiae var. affinis Grayson, Proc. Boston Soc. N.H., 14, p. 279, 1871—Tres Marías Islands; Lawrence, Mem. Boston Soc. N.H., 2, p. 289, 1874—Tres Marías.
- Hadrostomus aglaiae (not Pachyrhynchus aglaiae LAFRESNAYE) SALVIN and GODMAN, Biol. Centr.-Amer., Aves, 2, p. 121, 1890—part, Tres Marías Islands.
- Platypsaris aglaiae insularis RIDGWAY, Proc. U.S.Nat. Mus., 14, p. 469, 1891—Tres Marías; Nelson, North Amer. Fauna, 14, p. 47, 1899—María Madre Island, Tres Marías; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 857, 1907—Tres Marías Islands (monog.).

Range: Tres Marías Islands, off western Mexico.

*Platypsaris aglaiae yucatanensis Ridgway. Yucatán Becard.

Platypsaris aglaiae yucatanensis RIDGWAY, Proc. Biol. Soc. Wash. ,19, p. 120, 1906—Yucatán; idem, Bull. U.S.Nat. Mus., 50, Part 4, p. 858, 1907—Yucatán (monog.); GRISCOM, Amer. Mus. Novit., 235, p. 15, 1926—Vigia Chica and Xcaret, Yucatán.

Sci. Phila., 80, p. 168, 1928-Pinheiro, Pará.

Tityra intermedia Cabanis and Heine, Mus. Hein, 2, p. 81, 1859—Pará (type in Heine Collection examined; =immature female).

¹The type which I have recently examined proves to be an immature female of T. c. cayana. It is certainly misleading to compare it with T. semifasciata, for the coloration of the bill, particularly on the lower mandible, does not materially differ from certain other specimens from the Pará region and French Guiana, with

Tityra brasiliensis (not of SWAINSON) PELZELN, Orn. Bras., 2, p. 119, 1868—part, Barra [=Manáos] and Pará (spec. in Vienna Museum examined).

Tityra braziliensis HELLMAYR, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 667, 1906—part, females Nos. 6, 7, Barra do Rio Negro and Pará; idem, l.c., Math.-phys. Kl., 26, No. 2, p. 90, 1912—Pará.

Range: French, Dutch, and British Guiana; Trinidad; Venezuela; eastern Colombia; eastern Ecuador; eastern Peru; northern Brazil, along the Amazon and its tributaries east to the Pará District; eastern Bolivia.¹

10: Dutch Guiana (vicinity of Paramaribo 1); British Guiana (Hyde Park, Demerara River 2); Venezuela (Catatumbo River, Zulia 2); Colombia (Bogotá 1); Bolivia (Buenavista 3, Río Palacios, near Buenavista 1).

which it also agrees in coloring and markings of the back and under parts. The head is molting, and while the pileum and auriculars are, for the greater part, still covered with the brownish black feathers of the juvenile plumage, whose whitish bases show through here and there, a number of newly growing feathers in the superciliary region are uniform glossy black as in the adult female. The alleged lesser amount of black in the malar region is due to the fact that the feathers, just emerging from the sheaths, are not fully grown. Measurements of the type: Wing 113; tail 73; bill 25.

¹Since discussing the relationship of T. cayana and T. braziliensis (in Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, pp. 666-668, 1906), I not only have once more gone over the entire series in the Vienna Museum, but have also carefully studied a large amount of additional material with the result that the views, expressed in the paper referred to, must be thoroughly modified. In comparing series from the heart of the ranges of T. cayana and T. braziliensis, the characters separating the two forms, viz., the markings of the bill and the coloration of the female, are found to be perfectly constant. All of the numerous adult females seen from the Guianas, Venezuela, and Trinidad have the top and sides of the head uniform black, the ground color of the upper parts clear gray (without any brownish tinge), and the ventral surface pure white, narrowly streaked with black on foreneck and chest, while the bill, in both sexes, is reddish, tipped with black. This type of coloration also prevails in Amazonia, though at various places on the lower Amazon: at Pará, Santarém, and Manáos—along with normally colored specimens—females with streaked head, brownish back, buffy, more heavily striped under parts, and mostly black bills are occasionally found, which cannot be distinguished from east-Brazilian females of T. braziliensis. In Bolivia, where its range adjoins that of the latter form, intergradation is likewise suggested. Seven adult males from Buenavista, dept. Santa Cruz, are typically cayana, while another male from the same locality (Field Museum, June 18, 1924. J. Steinbach, No. 13490), in coloring of bill, resembles braziliensis. Females from Buenavista have the bill of cayana, but differ from more northern examples by having the black hood less compact, the feathers being laterally slightly edged with grayish, the upper parts more buffy grayish, and the chest sometimes faintly shaded with buffy, thus displaying variation towards the characters of braziliensis.

Material examined.—Colombia: Bogotá 1; Palmar, Boyacá 1.—Venezuela: Catatumbo River, Zulia 2; El Trompillo, Carabobo 1; Sierra de Carabobo 2; Caura Valley 9; San Pedro, Caura River 2; El Llagual, Caura 1; El Callao, dist. Yuruari 2; Yacua, Paría Peninsula 1; near Cumaná 1.—Island of Trinidad: Caparo 10.—British Guiana: Bartica Grove 2; Demerara River 2.—Dutch Guiana: near Paramaribo 1.—French Guiana: Cayenne 4; Mana 5; Tamanoir, Mana River 1; Pied Saut, Oyapock 8.—Brazil: Forte do Rio Branco 1; Barcellos 2; Manáos 5; Obidos 6; Borba, Rio Madeira 1; Pará 4; Benevides, Pará 1; Marco da

Braz., 1, p. 305, 1907—São Carlos do Pinhal, Bebedouro, Rio Feio, Itapura, Rio Mogy-Guassú, and Jaboticabal (São Paulo), and Nova Hamburgo, Rio Grande do Sul; Hellmayr, Nov. Zool., 15, p. 56, 1908—Goyaz; Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, pp. 309, 540, 1910—Santa Ana, Misiones, and Alto Paraná; idem, Bol. Soc. Physis, 1, p. 347, 1914—Misiones.

Tityra brasiliensis consp.? Chrostowski, Compt. Rend. Soc. Sci. Varsovie, 5, pp. 483, 498, 1912—Coupim, Paraná.

Tityra cayana braziliensis HELLMAYR, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 336, 1929—Piauhy (crit.).

Range: Eastern and southern Brazil, from Piauhy and Pernambuco south to Rio Grande do Sul, west to Matto Grosso; Paraguay; northeastern Argentine (Misiones).

9: Brazil (Victoria, São Paulo 1; Macaco Secco, near Andarahy, Bahia 2); Paraguay (Itapé 1); Argentina, Misiones (Eldorado 3, Puerto Segundo 2).

*Tityra semifasciata semifasciata (Spix). BAND-TAILED TITYRA.

Pachyrhynchus semifasciatus SPIX, Av. Bras., 2, p. 32, pl. 44, fig. 2, 1825—Pará (type in Munich Museum examined; = male).

Tityra semifasciata CABANIS, Arch. Naturg., 13, (1), p. 239, 1847—part, Pará; Pelzeln, Orn. Bras., 2, p. 119, 1868—part, Barra do Rio Negro, Rio Amazonas, and Rio Muriá; Allen, Bull. Essex Inst., 8, p. 79, 1876—

'Birds from Bahia down to Santa Catharina, Misiones, and Paraguay agree well together. Adult males from Piauhy are not different either, but an adult female from Santa Maria, west of Santo Antonio de Gilboez, in that state, and the (female) type of *P. braziliensis* in the Cambridge (Eng.) Museum have the ground color of the back clear gray instead of brownish, and that of the lower parts nearly pure white, forming thus the transition to *T. c. cayana*. As the latter form does in eastern Bolivia, *T. c. braziliensis*, in western Matto Grosso, intergrades with its northern representative. While two adult males and two females from Engenho do Gama, on the upper Guaporé, and a single female from Chapada are in every way typically *braziliensis*, another adult male taken by Natterer at Retiro, in the same district as Engenho do Gama, has the reddish, black-tipped bill of *cayana*, and two females in the American Museum of Natural History, collected by Geo. K. Cherrie at Urucúm in 1913, in markings of bill and coloration of plumage, likewise resemble Guianan and Venezuelan examples. As in the case of the aberrant Lower-Amazonian and Bolivian specimens discussed under the preceding heading, I take them to be individual variants of the prevalent breeding race.

Material examined.—Piauhy: Santa Philomena I; Burity, near Parnaguá I; Santa Maria I.—Bahia: Fazenda Ingazeira, Rio Preto I; Macaco Secco, near Andarahy 2; Bahia 7.—Rio de Janeiro I.—Minas Geraes: Agua Suja, near Bagagem I.—Goyaz: Goyaz City 2.—São Paulo: Victoria I; Ipanemá 2; Antonio Dias, near Campinas I; Mattodentro I; Itararé I; Irisanga I.—Paraná: Curityba 3.—Santa Catharina: Serra do Mirador I.—Matto Grosso: Chapada I; Urucúm 2; Engenho do Gama 4; Retiro I.—Paraguay: Bernalcué I; Río Negro I; Itapé I.—Argentina: Misiones 5.

Tityra personata (not of JARDINE and SELBY) SCLATER and SALVIN, P.Z.S. Lond., 1873, p. 284—Yurimaguas, Peru; Allen, Bull. Amer. Mus. N.H., 2, p. 73, 1889—part, Río Napo.

Tityra semifasciata semifasciata Hellmayr, Abhandl. Bayr. Ak. Wiss., Mathphys. Kl., 26, No. 2, p. 90, 1912—Rio Muriá, Pará; l.c., p. 120, 1912—Mexiana; Chapman, Bull. Amer. Mus. N.H., 36, p. 488, 1917—Buenavista, eastern Colombia; idem, l.c., 55, p. 538, 1926—Napo, Río Suno, and near Macas, eastern Ecuador.

Range: Northern Brazil, from northern Maranhão, the estuary of the Amazon, and the confines of French Guiana (Carsevenne River) west through the Amazon Valley and its tributaries to extreme northern Peru (Iquitos; Yurimaguas; Xeberos = Jeveros), north through eastern Ecuador to the eastern base of the Eastern Andes in Colombia (Buenavista), south to the middle stretches of the Rio Madeira (Calama; Allianca; Porto Velho).¹

3: Brazil (Porto Velho, Rio Madeira 3).

¹A single specimen from the Peruvian Amazon and two from Coca, Ecuador, appear to be inseparable from a series of Brazilian skins. Birds from the Rio Madeira (Allianca, Calama, Porto Velho), in size, agree with the type and other examples from Pará. The black markings on the lateral rectrices are exceedingly variable in different individuals within the same locality.

Material examined.—Brazil: Pará (including the type) 2; Rio Muriá, Pará 1; Manáos 1; Santarém 2; Rio Madeira, Borba 1, Calama 1, Allianca 1, Porto Velho 3; Tonantins, Rio Solimões 1.—Peru: Iquitos 1.—Ecuador: Coca, upper Napo 2.

*Tityra semifasciata columbiana Ridgway.2 Colombian Tityra.

Tityra semifasciata columbiana RIDGWAY, Proc. Biol. Soc. Wash., 19, p. 119, 1906—La Concepción, Santa Marta, Colombia; HELLMAYR, P.Z.S.Lond.,

¹Tityra semifasciata fortis Berlepsch and Stolzmann: Similar to T. s. semifasciata, but larger, with heavier bill. Wing 124-131; tail 76-80.

Specimens from Matto Grosso are intermediate in size between semifasciata and fortis, but nearer the latter.

Material examined.—Peru: Huachipa, Huánuco I; Chaquimayo, Puno I.—Bolivia: Cerro Hosane I, Santa Cruz 2, Santo Corazón, Chiquitos I.—Brazil, Matto Grosso: Caiçara I; Villa Bella de Matto Grosso I.

² Tityra semifasciata columbiana RIDGWAY: Male very similar to T. s. semifasciata and about the same size, but lower mandible distinctly tipped with black, 1911, p. 1142-part, Nóvita, Chocó, Pacific Colombia (crit., excl. Esmeraldas, Ecuador); Chapman, Bull. Amer. Mus. N.H., 36, p. 489, 1917-Nóvita, Dabeiba, and Puerto Valdivia, lower Cauca, Colombia; Topp and CARRIKER, Ann. Carnegie Mus., 14, p. 322, 1922-Chirua, La Tigrera. Minca, Onaca, Valparaiso, Cincinnati, Las Vegas, Fundación, and Pueblo Viejo, Santa Marta Region; BANGS and BARBOUR, Bull. Mus. Comp. Zool., 65, p. 213, 1922-Mount Sapo, Darién.

Tityra semifasciata heteromelaena Todd, Proc. Biol. Soc. Wash., 29, p. 96, 1916—Sierra de Carabobo, Venezuela (type in Carnegie Museum examined).

Tityra personata (not of JARDINE and SELBY) SCLATER, P.Z.S.Lond., 25, D. 70, 1857—part, Santa Marta; Sclater and Salvin, l.c., 1879, p. 517— Remedios and Neche, Antioquia (eggs descr.); SALVIN and GODMAN. Ibis, 1880, p. 169-Minca, Santa Marta; BERLEPSCH, Journ. Orn., 32, p. 305, 1884-Bucaramanga.

Tityra semifasciata (not Pachyrhynchus semifasciatus SPIX) SCLATER, Cat. B. Brit. Mus., 14, p. 330, 1888-part, spec. e'-i', Minca, Remedios, Santa Marta, and Venezuela; BANGS, Proc. Biol. Soc. Wash., 12, p. 158, 1898 -Pueblo Viejo, Santa Marta; Allen, Bull. Amer. Mus. N.H., 13, p. 154, 1900-Minca, Cacagualito, and Valparaiso, Santa Marta Region.

Range: Tropical Zone of eastern Panama (Darién), Colombia (except the extreme southwest and the Amazonian slope of the Eastern Andes), and adjacent districts of western Venezuela (Colón. Táchira; Cumbre de Valencia and Sierra de Carabobo, Carabobo; Loma Redonda, north coast mountains, near Caracas).

1: Venezuela (Colón, Táchira 1).

and the white basal zone of the lateral rectrices generally less extensive; female browner above, especially on the pileum, and more like T. s. costaricensis, from which it may, however, be distinguished by its brownish gray instead of deep brown back.

T. s. heteromelaena appears to have been based on an individual variant of the present form. In the type, the black of the pileum is more extended than in any other specimen examined, and reaches as far back as the posterior border of the eye, while there is less white in the tail, both basally and apically. Another adult male from northern Venezuela (Loma Redonda), however, in tail-pattern as well as in the restricted amount of black on the anterior crown agrees with average specimens from Santa Marta, and a female from La Cumbre de Valencia hardly differs from a topotypical series by slightly browner pileum and mantle. A male from Colon, Tachira, finally is an exact duplicate of Colombian examples.

Ten adult males from Santa Marta, Colombia 120-124 70-77 One adult male from Nóvita, Chocó, Colombia 122 77
One adult male from Novita Choco Colombia
One adult male from Novita, Choco, Colombia 122 77
One adult male from Colón, Táchira, Venezuela 124 76
One adult male from Sierra de Carabobo, Venezuela
(type of T. s. heteromelaena) 121 76
One adult male from Loma Redonda, Venezuela 119 73
Four adult females from Santa Marta, Colombia 117-126 70-77
One adult female from Nóvita, Chocó, Colombia 114 70
One adult female from Cumbre de Valencia, Venezuela 117 71

Material examined.—Colombia: Nóvita, Chocó 2; Santa Marta, Cincinnati 7, Pueblo Viejo 2, Fundación 2, Minca 2, Las Vegas 1.—Venezuela: Sierra de Carabobo 1; Cumbre de Valencia, Carabobo 1; Loma Redonda, north coast mountains, near Caracas 1; Colón, Táchira 1.

*Tityra semifasciata nigriceps Allen. BLACK-FACED TITYRA.

- Tityra nigriceps Allen, Auk, 5, p. 287, 1888—"headwaters of the Río Napo," errore; we suggest near Gualea, western Ecuador (type in American Museum of Natural History, New York, examined); idem, Bull. Amer. Mus. N.H., 2, p. 73, 1889—"Napo;" Chapman, l.c., 55, p. 539, 1926—"Napo" (crit.).
- Tityra semifasciata esmeraldae Chapman, Bull. Amer. Mus. N.H., 33, p. 320, 1914—Esmeraldas, northern Ecuador; idem, l.c., 36, p. 489, 1917—Barbacoas, Colombia; idem, l.c., 55, p. 539, 1926—Esmeraldas and Chone, western Ecuador.
- Tityra nigriceps gualeae LÖNNBERG and RENDAHL, Ark. Zool., 14, No. 25, p. 75, 1922—near Gualea, 4500 ft., western Ecuador; GYLDENSTOLPE, l.c., 19, A, No. 1, p. 71, 1926—near Gualea.
- Tityra personata (not of JARDINE and SELBY) SCLATER, P.Z.S.Lond., 28, p. 295, 1860—Esmeraldas; Allen, Bull. Amer. Mus. N.H., 2, p. 73, 1889—part, San Miguel, Ecuador; Goodfellow, Ibis, 1901, p. 709—Santo Domingo.
- Tityra semifasciata (not Pachyrhynchus semifasciatus SPIX) SCLATER, Cat. B. Brit. Mus., 14, p. 330, 1888—part, spec. j'-l', Esmeraldas and Balzar, Ecuador; HARTERT, Nov. Zool., 5, p. 489, 1898—Paramba, Ecuador.
- Tityra semifasciata personata HELLMAYR, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 668, 1906—part, n.w. Ecuador.

Tityra semifasciata nigriceps ALLEN: Nearest to T. s. columbiana, but somewhat smaller; male above pure white (instead of pale neutral gray), only tertials and rump very faintly tinged with pale grayish, and below also whiter; black subterminal area of tail much more extensive, leaving only a restricted basal zone white; female more nearly resembling that of T. s. semifasciata, but with the black subterminal band much broader, the basal gray band correspondingly reduced. Wing 112-117, (female) 108-114; tail 68-76, (female) 63-70; bill 25-26.

The type of T. nigriceps, a skin of the ordinary Quito "make," is doubtless erroneously labeled as coming from the "Río Napo." In whiteness of the body plumage, reduction of white at the base of the rectrices, and in coloring of bill (both mandibles conspicuously tipped with blackish), it agrees perfectly with other males from western Ecuador; whereas T. s. semifasciata from Coca, Río Napo, like Lower-Amazonian skins has the back, breast, and sides decidedly grayish (very near pale neutral gray on the upper parts), an extensive, sharply defined white basal area in the tail, and hardly any trace of the black tip to the bill. The amount of black on the pileum is extremely variable in the west-Ecuadorian form. The majority have the black frontal band of about the same width as T. s. columbiana; but in a male from Vacqueria (Esmeraldas) it extends as far back as the posterior angle of the eye (as in the type of T. s. heteromelaena), bridging the gap between the normal form (esmeraldae) and the type of T. nigriceps, which has the entire pileum black, and even the hind neck black, spotted and edged with white. The white basal tail-area is likewise variable, and one bird from northwestern Ecuador has just as little white as the type of T. nigriceps. The description of T. n. gualeae corresponds in every detail to the type specimen (an adult male with rudimentary second primary) in the American Museum of Natural History, which, I have not the least doubt, merely represents an individual variant of T. s. esmeraldae with the maximum of black about the head being carried down to the upper throat.

Material examined.—Western Ecuador: Santo Domingo 1; prov. Esmeraldas, Vacqueria 2, Carondelet 3, Pambílar 1; Paramba 2; "headwaters of the Río Napo"

(type of T. nigriceps) 1.

Tityra semifasciata columbiana (not of RIDGWAY) HELLMAYR, P.Z.S.Lond., 1911, p. 1142—part, prov. Esmeraldas, Ecuador.

Range: Tropical Zone of western Ecuador and extreme south-western Colombia (Barbacoas, Nariño).

1: Ecuador (Vacqueria, prov. Esmeraldas 1).

*Tityra semifasciata costaricensis Ridgway. Costa Rican Tityra.

Tityra semifasciata costaricensis Ridgway, Proc. Biol. Soc. Wash., 19, p. 119, 1906—Bonilla, Costa Rica; idem, Bull. U.S.Nat. Nat., 5, p. 179, 1926—Salto de Ubá and Foz Iguassú, Paraná; Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 337, 1929—Burity, Piauhy (crit.).
- Erator inquisitor inquisitor Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 309, 1910—Alto Paraná, Paraguay.
- Range: Eastern Brazil, from Piauhy and Bahia south to Santa Catharina, and adjoining districts of Paraguay (Sapucay; Alto Paraná) and Argentina (Misiones).²
- 8: Brazil (Macaco Secco, near Andarahy, Bahia 1; Victoria, São Paulo 1; Joinville, Santa Catharina 1); Argentina, Misiones (Eldorado 3, Puerto Segundo 2).
- ¹Tityra Azarac (sic) Bertoni (Rev. Agron. y Cienc. Aplic., 1, p. 529, 1899—eastern Paraguay), hardly more than a nomen nudum, may likewise belong here.

²This form is perhaps divisible into two races, birds from the northern parts of the range (Bahia, Piauhy) being on average smaller. The female of T. i. inquisitor has the back decidedly brownish, coarsely spotted with blackish, and the throat and brest washed with dingy grayish buff. While three Bahia females—except in smaller size—do not appreciably differ from southern examples, one from Burity, Piauhy has the (wider) frontal band and the sides of the head much deeper rufous and shows, on the breast, numerous narrow dusky streaks, of which there is no trace in the skins from other localities. The type of P. natterii, now in the Museum of Cambridge (Eng.) University, an adult male with modified (rudimentary) second primary, agrees in size with specimens from southern Brazil, Swainson's name becoming thus an absolute synonym of L. inquisitor. P. jardinii also appears to have been based on a male in first annual plumage (without spurious primary) of the large southern bird.

The type of *P. selbii* Sw., likewise forwarded for my inspection by Dr. Hans Gadow from the Cambridge Museum, however, is decidedly smaller, agreeing in dimensions with birds from Bahia and Piauhy. It is an adult male and, in agreement with Swainson's description, the first primary falls between the fourth and fifth, if the rudimentary (second) wing feather is not taken into account. The locality "southern Brazil" is doubtless wrong, and if the slight difference in size be deemed of sufficient importance, the northern race must be called *T. inquisitor selbii* (SWAINSON).

The types of E. albinuchus from "Brazil" in the Heine Collection are hard to allocate, but appear to be nearer typical inquisitor from southern Brazil. The

¹Tityra inquisitor pelzelni Salvin and Godman: Similar to, and agreeing with, T. i. inquisitor in the male having the cheeks and auriculars black, but tail extensively white at the base and frequently with a distinct white apical margin; female much like T. i. erythrogenys, but not quite so purely gray above, though similarly spotted with black, and white basal area of tail more extensive; size on average smaller than in T. i. inquisitor.

This form combines the black sides of the head of *T. inquisitor* with the tail markings of *T. i. albitorques*. There is much individual variation in the extent of the white area at the base of the rectrices, certain specimens (from Bolivia and Matto Grosso) with the least amount of white being inseparable from typical

Tityra inquisitor erythrogenys (not Psaris erythrogenys SELBY) HELLMAYR, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, pp. 32, 90, 1912—Peixe-Boi and Santo Antonio do Prata, Pará; idem, l.c., p. 33, 1912—part, Pará localities; BEEBE, Zoologica (N.Y.), 2, p. 93, 1916—Utinga, Pará.

Tityra erthrogenys Snethlage, Bol. Mus. Goeldi, 8, p. 348, 1914—part, Santo Antonio do Prata, Pará.

Tityra inquisitor pelzelni Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 33, 1912—Matto Grosso and eastern Bolivia (monog.); idem, Nov. Zool., 32, p. 15, 1925—Chiquitos and Santa Cruz, Bolivia (crit.); Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 338, 1929—Mangunça Island, Maranhão.

Range: Eastern Bolivia (Chiquitos; dept. Santa Cruz) and western Brazil, in state of Matto Grosso, and apparently extending along the south bank of the Amazon as far east as Pará (Peixe-Boi; Santo Antonio do Prata) and northern Maranhão (Mangunça Island).

: Brazil (Mangunça Island, Maranhão 1).

inquisitor. The white apical margin is not a constant feature either, it being absent in four Bolivian and three Matto Grosso skins, and but faintly suggested in two from the former and two from the latter country. Other individuals, however, show a very distinct white apical band, and in coloration of tail closely approach abbitorques.

Birds from the lower Amazon may prove to be separable. They have even more white than the Matto Grosso skins with the maximum of white in the tail, and the auriculars, in some of the males, are streaked with white. A female from Peixe-Boi, Pará district, however, does not differ in tail markings from the average of pelzelni, as represented by a series from Matto Grosso, and the examination of additional material seems desirable before any further separation is

attempted.

*Tityra inquisitor erythrogenys (Selby).1 Rufous-cheeked Tityra.

Psaris erythrogenys Selby, Zool. Journ., 2, No. 8, p. 483, April, 1826—"Pernambuco," errore; we suggest Cayenne, French Guiana³ (type in Paris Museum examined; = adult female); Swainson, Natur. Libr., Orn., 10, (Flycatchers), p. 82, pl. 3, 1838 (descr. and figure of type).

Tityra inquisitrix (not Lanius inquisitor LICHTENSTEIN) SCLATER, P.Z.S. Lond., 25, p. 71, 1857—part, Cayenne and Bogotá.

Tityra inquisitor Sclater, Cat. B. Brit. Mus., 14, p. 331, 1888—part, spec. b,c,g, Cayenne and Bogotá.

Tityra erythrogenys Berlepsch and Hartert, Nov. Zool., 9, p. 55, 1902—Río Catañapa, Perico, and Maipures, Río Orinoco, and Suapure, Caura, Venezuela (crit.; spec. examined); Beebe, Zoologica (N.Y.), 1, p. 94, 1909—La Brea, Orinoco Delta; (?) Snethlage, Bol. Mus. Goeldi, 8, p. 348, 1914—part, Rio Jamundá (Faro).

¹ Tityra inquisitor erthrogenys (Selby): Similar to T. i. inquisitor in having only the extreme base of the tail white and no white apical margin, and the cheeks and auriculars black in the male sex; but smaller; male with less white on the hind neck; female with back clear pale gray (without any brownish suffusion), more or less spotted with black, and neither throat nor chest tinged with buffy.

Specimens from various parts of Venezuela and Bogotá skins agree with those from the Guianas. The amount of spotting in the females is subject to much individual variation, some examples being heavily marked with black above, while others show just a few narrow streaks on the anterior portion of

the back.

Material examined.—French Guiana: Cayenne 1; Pied Saut, Oyapock 2.—Dutch Guiana: Near Paramaribo 3.—Venezuela: Caura District, Suapure 2, El Llagual 4, San Pedro 1; La Bomba, Cuyuni River 2; Orinoco River, Maipures 3, Río Catañapa 1, Perico 1; San Esteban, Carabobo 4; El Trompillo, Carabobo 2; Lagunillas, Mérida 1; Sabana de Mendoza, Mérida 1.—Colombia: Bogotá 6.

²The type is quite distinct from specimens recently collected in the neighboring states of Bahia and Piauhy, but agrees in every particular with females from French Guiana. It was obtained in exchange from a dealer, J. Verreaux, whose localities are not always reliable, and I have little doubt it really came from Cayenne, and not from Pernambuco, where either T. i. inquisitor or the doubtfully separable T. i. selbii (see above, p. 217) may be expected to occur.

Tityra inquisitor erythrogenys Hellmayr, Nov. Zool., 13, pp. 327, 328, 1906—part, "Pernambuco," Surinam, Venezuela, and Colombia (crit.); Berlefsch, l.c., 15, p. 140, 1908—Cayenne; Hellmayr, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 32, 1912—part, diag. and habitat, excl. Pará localities and Archidona, Ecuador.

Erator inquisitor erythrogenys Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 251, 1916—Caicara and above the falls of Atures, Orinoco Region, Venezuela.

Range: French, Dutch, and (?) British Guiana; Venezuela (Orinoco Valley and its tributaries; San Esteban and El Trompillo, Carabobo; Lagunillas and Sabana de Mendoza, Mérida) and west to the eastern base of the Eastern Andes of Colombia ("Bogotá").

1: Colombia ("Bogotá" 1).

Tityra inquisitor buckleyi Salvin and Godman. Buckley's Tityra.

- Tityra buckleyi Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 120, Dec., 1890—Yanayacu, eastern Ecuador (type in British Museum examined; =adult male); Hellmayr, P.Z.S.Lond., 1911, p. 1143 (in text)— Ecuador (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 490, 1917—Florencia, Caquetá, Colombia (spec. examined).
- Tityra albitorques (not of Dubus) Allen, Auk, 5, p. 287, (in text), 1888—Ecuador (crit.); idem, Bull. Amer. Mus. N.H., 2, p. 73, 1889—Río Napo (spec. examined).
- Tityra inquisitor (not Lanius inquisitor LICHTENSTEIN) SCLATER, Cat. B. Brit. Mus., 14, p. 331, 1888—part, spec. h, Yanayacu; Goodfellow, Ibis, 1901, p. 710—Archidona, Ecuador (spec. in Tring Museum examined; one female).

¹Tityra inquisitor buckleyi Salvin and Godman: Nearest to T. i. erythrogenys and with white restricted to extreme base of rectrices, but male with cheeks and auriculars white as in T. i. albitorques; female not distinguishable with certainty from erythrogenys.

The type has the rump decidedly white in contrast to the pallid neutral gray of the back and tail coverts, while in two other males, one from the Río Napo, the other from Florencia, Caquetá, the dorsal surface is uniform pale grayish as in the allied races. The tail, as a rule, is entirely black except for the extreme base; but the Río Napo male has distinct, though small, white apical spots on the three outer rectrices and more white at the base of the outer web of the penultimate tail feather, thus diverging in the direction of T. i. albitorques. The white nuchal zone appears to be slightly more pronounced than in T. i. erythrogenys, the back being pale neutral gray, heavily spotted with black. More material of this little-known form, which combines the tail markings of erythrogenys with the white auriculars of albitorques in the male sex, is urgently desired.

Measurements		
	Wing	Tail

Range: Southeastern Colombia (Florencia, Caquetá) and eastern Ecuador (Yanayacu; Archidona; Río Napo).

*Tityra inquisitor albitorques Dubus. WHITE-COLLARED TITYRA.

Tityra albitorques Dubus, Bull. Ac. Roy. Belg., 14, Part 2, p. 104, 1847-Peru; LAFRESNAYE, Rev. Zool., 11, p. 244, 1848 (crit.); SCLATER, P.Z.S. Lond., 23, p. 150, 1855-Bogotá; idem, l.c., 25, p. 71, 1857-Peru and Bogotá (monog., excl. syn. P. fraserii); Sclater and Salvin, l.c., 1867, pp. 751, 757—Chyavetas, Peru (spec. examined); Pelzeln, Orn. Bras., 2, p. 120, 1868-part, Barra = Manáos (spec. in Vienna Museum examined); SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 284—Chyavetas, Peru; idem, l.c., 1879, p. 517-Remedios, Colombia; SALVIN and GODMAN, Ibis, 1880, p. 169-Valencia, Santa Marta; TACZANOWSKI, P.Z.S.Lond., 1882, p. 23-Yurimaguas, Peru; idem and BERLEPSCH, l.c., 1883, p. 559-

¹Tityra inquisitor albitorques Dubus is distinguished from the allied races by the combination, in the male sex, of the white cheeks and auriculars with an extensive white basal area of the tail, occupying about three-fourths of its length and separated from the very conspicuous white apical margin by a broad black subterminal band of about 20 mm. width; while the female, in addition to the tail markings, may be recognized from erythrogenys and buckleyi by having the back unspotted and slightly washed with brownish.

The distribution of this form is very peculiar, it having been found both in western Ecuador and eastern Peru, whereas eastern Ecuador is tenanted by another closely allied race (T. i. buckleyi). A single adult male secured by E. Bartlett at Chyavetas, the only one seen from Peru, appears to me indistinguishable from others taken in western Ecuador and various parts of Colombia and, what is even more surprising, a couple of adults obtained by J. Natterer at Manáos on July 21, 1833 are also referable to the same form. The male has the white auriculars, the female the plain brownish gray back, and both the distinctly bicolored tail with white apical margin, exactly like specimens from the Pacific coast of Colombia. More material from northern Brazil is urgently needed to explain this extraordinary range.

Adult males Wing Tail One from Chyavetas, Peru 106 67 One from Manáos, Brazil 106 68 One from Milagro, prov. Guayas, Ecuador 67 106 64,64,67,67 Four from Chocó, western Colombia 103,105,106,107 63 One from Fundación, Santa Marta 104 Adult females One from Manáos, Brazil 951/2 Two from Chocó, western Colombia 100,103 64,64

Range: Eastern Peru (Chyavetas; Yurimaguas); northern Brazil (Manáos); western Ecuador (Guayaquil; Milagro; Daule; Bucay; Balzar); Colombia (Quibdó, Nóvita, Noanamá, and El Tigre, Río Tamaná, Chocó, Pacific coast; Valencia, Tucurinca, and Fundación, Santa Marta District; Gamarra, lower Magdalena; "Bogotá" collections), north to eastern Panama (Darién).

1: Ecuador (Milagro, prov. Guayas 1).

*Tityra inquisitor fraserii (Kaup).1 Fraser's Tityra.

Psaris fraserii Kaup, P.Z.S.Lond., 19, "1851," p. 47, pls. 37, 38, Oct., 1852—no locality given (types in Lord Derby's collection, now in the Liverpool Museum, examined).²

¹Tilyra inquisitor fraserii (KAUP) differs from T. i. albitorques in larger size, generally heavier bill, and in the male sex by darker gray back, decidedly grayish (instead of nearly pure white) under parts, and slightly broader black subterminal tail band. The female is even more different, having the back chiefly Verona brown and the breast tinged with grayish, while the tail is no daistinctly bicolored, the basal portion being grayish and blending gradually with the blackish subapical zone. Certain specimens from Costa Rica, however, form the transition to albitorques in both coloration of back and pattern of tail.

Material examined.—Forty specimens from Yucatán to western Panama.

²The Liverpool Museum has three specimens, marked "type of P. fraseri, KAUP," none with any specified locality. Two, an adult male with spurious second primary (Derby Museum, No. 1868) and a female (D. M., No. 1868a) are typical examples of the Central American race, but the third skin, an adult male purchased of Leadbeater in 1842 and bearing the Derby Museum No. 1868b, is just as decidedly referable to the pale, small-billed T. a. albitorques, of northern South America. Kaup's (rather general) diagnosis might apply to either of the two males, and the measurements (wing 105-113; tail 63-70) evidently cover them both, No. 1868b corresponding to the minimum, No. 1868 to the maximum of his figures. On the other hand, the figure 32 mm., given for the length of the bill from the gape, can have been taken only from No. 1868, since the other bird (No. 1868b) barely measures 24 mm. The plates 37 and 38, without any shadow of doubt, depict the Central American form, and are faithful representations of Nos. 1868 and 1868a. Under these circumstances we feel that P. fraseri should be restricted to the northern form, and designate No. 1868 as the type, suggesting Vera Cruz, Mexico, as terra typica.

- Tityra albitorques (not of Dubus) Moore, P.Z.S.Lond., 27, p. 56, 1859—Petén, Guatemala; Sclater, l.c., p. 384, 1859—Playa Vicente, Vera Cruz; Sclater and Salvin, Ibis, 1860, p. 400—Choctum, Guatemala; Lawrence, Ann. N.H., 38, p. 458, 1928—Almirante, Chiriquicito, and Boquete Trail, Panama.

Range: Southeastern Mexico, in states of Vera Cruz, Oaxaca, Tabasco, Chiapas, and Yucatán, and southward through Guatemala, British Honduras, Honduras, Nicaragua, and Costa Rica to western Panama.²

6: Mexico (Yucatán 1); Guatemala (Los Amates 1); Costa Rica (Jiménez 1, Limón 1, Lagarto 1, Guayabo 1).

¹Variously spelled fraseri, fraserii, and frazeri.

²Owing to lack of material I am unable to indicate the exact eastern limit of the range. The most easterly localities whence specimens have been available for examination are Bugaba, Chiriquí and Natá, Coclé, Panama.

Tityra leucura Pelzeln. 1 WHITE-TAILED TITYRA.

Tityra (Erator) leucura Pelzeln, Orn. Bras., 2, pp. 120, 183, 1868—Salto do Girão, Rio Madeira, Brazil (type in Vienna Museum examined).

Tityra leucura HELLMAYR, Nov. Zool., 17, p. 312, 1910-Salto do Girão (crit.).

Range: Western Brazil, on the banks of the upper Rio Madeira (Salto do Girão).

Genus HAEMATODERUS Bonaparte.

Haematoderus Bonaparte,² Ateneo Italiano, 2, No. 11, p. 314 (=Consp. Volucr. Anisod., p. 4), 1854—type by monotypy [Haematoderus] militaris "GM." = Coracina militaris SHAW.

Haematoderus militaris (Shaw). CRIMSON FRUIT-CROW.

Coracina? militaris Shaw, Mus. Lever., No. 2, p. 61, with col. plate, 1792—Cayenne; LATHAM, Ind. Orn., Suppl., p. XXVII, 1801—Cayenne (ex Shaw).

Ampelis militaris VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 164, 1817—based on Coracina militaris LATHAM and "Le Grand Cotinga" LEVAILLANT, Hist. Nat. Ois. Nouv. et Rares Amér. et Indes, 1, p. 56, pl. 25 (adult), 26 (young), 1801, French and Dutch Guiana.

Querula rubra Vieillot, Tabl. Enc. Méth., Orn., 2, livr. 91, p. 768, 1822—based on Coracina militaris LATHAM and "Le Grand Cotinga" LEVAILLANT, French and Dutch Guiana.

¹Tityra leucura Pelzeln is known from a single male, molting from the juvenile into the first annual plumage. It is most nearly related to T. inquisitor albitorques and resembles it in the white cheeks and auricular region; but the upper parts and breast are much more strongly tinged with gray, without any white on the hind neck, and the tail lacks the black subterminal band. The rectrices are pale gray, with the base of the inner webs white for about twenty millimeters (as in T. i. inquisitor), and at the tips broadly, though not abruptly, margined with white. The outermost pair shows a narrow blackish shaft streak in the second third of the inner web, and a similar, but smaller spot exists near the base of the central rectrix. The coloration of the tail gives an abnormal impression, and may be due to the absence of melanin in the pigment cells during the process of growth. The bill, too, appears to have been retarded in its development. It is only one-third the size of the allied species and, instead of black, dark horn brown, paler below. The top of the head is mainly black, with slight metallic gloss, though on the forehead, superciliary region, and hind crown a number of the hazel brown juvenile feathers may yet be seen. The second primary, as is also the case in the first annual plumage of the allied species, is fully developed and very nearly as long as the third.

Additional material is required to establish the status of this alleged species. Measurements of the type: Wing 101; tail 63; bill 161/2.

² Haematoderus Bonaparte (Ann. Sci. Nat., (4), Zool., 1, p. 134, 1854) is a pure nomen nudum.

³There being no "militaris GMELIN," the generic name is almost unidentifiable. CABANIS and HEINE (Mus. Hein., 2, p. 107, 1859) have, however, used it in connection with Coracina militaris LATHAM [=SHAW].

Halle, 3. "1855," pp. 191-212, pl. 8, 1856 (anatomy); Descourtilz, Ornith. Brés., p. 24, pl. 26, fig. 2, circa 1856—Brazil (habits).

Pyroderus scutatus CABANIS and HEINE, Mus. Hein., 2, p. 109, 1859-Brazil; PELZELN, Orn. Bras., 2, p. 135, 1868—Registo do Sai, Rio de Janeiro, Mattodentro, Ypanemá and Rio Paraná (São Paulo), Curytiba (Paraná): REINHARDT, Vid. Medd. Naturhist. Foren., 1870, p. 315-near Lagoa Santa and Uberaba, Minas Geraes; HAMILTON, Ibis, 1871, p. 306-São Paulo (habits); BERLEPSCH, Journ. Orn., 21, p. 267, 1873-Blumenau, Santa Catharina; CABANIS, l.c., 22, p. 90, 1874—Cantagallo, Rio; BER-LEPSCH and IHERING, Zeits. Ges. Orn., 2, p. 141, 1885-Taquara and Arroio Grande, Rio Grande do Sul; SCLATER, Cat. B. Brit. Mus., 14, p. 397, 1888—Brazil; IHERING, Annuario Est. Rio Grande do Sul, 16, p. 128, 1899—[Taquara do] Mundo Novo; idem, Rev. Mus. Paul., 3, p. 217, 1899-São Paulo; idem, l.c., 4, p. 157, 1900-Cantagallo and Nova Friburgo, Rio; idem, Cat. Faun. Braz., 1, p. 315, 1907-Campos do Jordão (São Paulo), Rio Doce (Espirito Santo), and Ourinho (Paraná); DABBENE, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, pp. 313, 431, 1910-Santa Ana, Misiones; idem, Bol. Soc. Physis, 1, p. 350, 1914—Misiones; BERTONI, Faun. Parag., p. 58, 1914—Alto Paraná, Paraguay; Ménégaux, Rev. Franc. d'Orn., No. 115, p. 334, 1918-Villa Lutetia, near San Ignacio, Misiones; REBORATTI, El Hornero, I, p. 193, 1918—Concepción, Corrientes; FIEBRIG, 1.c., 2, p. 206, 1921—Paraguay; LIMA, Rev. Mus. Paul., 12, (2), p. 100, 1920 -Ilhéos to Belmonte, southern Bahia; SZTOLCMAN, Ann. Zool. Mus. Pol. Hist. Nat., 5, p. 180, 1926-Invernadinha and Vermelho, Paraná.

Range: Wooded region of southeastern Brazil, from southern Bahia and Minas Geraes south to Rio Grande do Sul, and adjacent sections of Paraguay and Argentina (prov. Corrientes and terr. Misiones).1

3: 'Argentina, Misiones (Río Paranay I, Puerto Segundo I, Eldorado 1).

*Pyroderus scutatus granadensis (Lafresnaye).2 EAST COLOMBIAN FRUIT-CROW.

Coracina granadensis LAFRESNAYE, Rev. Zool., 9, p. 277, 1846—"Nouvelle-Grenade" = Bogotá.

The present form has nowhere been found outside the area above circumscribed, and Messrs. Penard (Vog. Guyana, 2, p. 174, 1910) are undoubtedly mistaken in including it in the fauna of Surinam.

Nineteen specimens from Brazil and Misiones examined.

²Pyroderus scutatus granadensis (LAFRESNAYE): Very similar to P. s. scutatus, but decidedly smaller, with much shorter bill and tarsi; rufous brown pectoral spots as a rule somewhat paler.

A single adult from Táchira and three specimens obtained by S. Briceño

near Mérida appear to me indistinguishable from Bogotá skins.

Material examined.—Colombia: Bogotá 5, Bucaramanga 1.—Venezuela: San Cristóbal, Táchira 1; near Mérida 3.

- Pyroderus grenadensis Sclater, P.Z.S.Lond., 23, p. 153, 1855-Bogotá.
- Pyroderus granadensis Cabanis and Heine, Mus. Hein., 2, p. 109, 1859—New Granada; Wyatt, Ibis, 1871, pp. 123, 334—Canuto, south of Ocaña, Santander, Colombia; Sclater, Cat. B. Brit. Mus., 14, p. 398, 1888—Bogotá.
- Pyroderus scutatus granadensis Berlepsch, Journ. Orn., 32, p. 306, 1884—Bucaramanga, Santander, Colombia and Táchira, Venezuela (crit.); Chapman, Bull. Amer. Mus. N.H., 36, p. 500, 1917—La Palma and San Augustín, head of the Magdalena Valley, and Fusugasugá, Colombia.

Range: Subtropical Zone of eastern slope of Central Andes and Eastern Andes of Colombia, extending into western Venezuela (in states of Táchira and Mérida).

2: Colombia (Bogotá 2).

Pyroderus scutatus orenocensis (Lafresnaye). Orinocan Fruit-Crow.

- Coracina orenocensis Lafresnaye, Rev. Zool., 9, p. 277, 1846—"le pays situé a l'embouchure de l'Orénoque" (type in Museum of Comparative Zoology, Cambridge examined).
- Pyroderus orenocensis Cabanis and Heine, Mus. Hein., 2, p. 109, 1859—
 "Caracas," Venezuela (spec. examined); Sclater and Salvin, P.Z.S.
 Lond., 1869, p. 252—Puerto Cabello, Venezuela; Sclater, Cat. B. Brit.
 Mus., 14, p. 398, 1888—part, spec. b,c, Puerto Cabello, Venezuela; Penard
 and Penard, Vog. Guyana, 2, p. 175, 1910—Surinam (?); Chubb, Birds
 Brit. Guiana, 2, p. 310, 1921—Cuyuni and Demerara rivers.
- Pyroderus scutatus orenocensis Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 95, 1912—Paso Honda, San Esteban Valley, Carabobo, Venezuela; Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 255, 1916—Altagracía, lower Orinoco.

Range: Northern Venezuela, from the state of Carabobo (Puerto Cabello; San Esteban Valley; Cumbre de Valencia) and the vicinity of Caracas south to the Orinoco Valley (Altagracía), and east into British Guiana (Cuyuni and Demerara rivers).

*Pyroderus scutatus occidentalis Chapman.2 West Colombian Fruit-Crow.

Pyroderus scutatus occidentalis Chapman, Bull. Amer. Mus. N.H., 33, p. 631, 1914—San Antonio, Western Andes of Colombia; idem, l.c., 36, p. 500,

¹Two specimens from Carabobo have the rufous color beneath somewhat darker and less extensive than two topotypes from the Orinoco, thus verging in the direction of the black-bellied *P. s. granadensis*. One of the "Caracas" birds, however, hardly differs from the Orinoco examples.

Material examined.—Venezuela: Orinoco (including the type) 2; Altagracía, Orinoco 1; Puerto Cabello 1; San Esteban Valley 1; Cumbre de Valencia 1; "Cara-

cas 3.

²Pyroderus scutatus occidentalis Chapman: Nearest to P. s. orenocensis, but under parts, including under wing coverts, darker, hazel rather than cinnamon

1917—Las Lomitas, San Antonio, Río Lima, Cerro Munchique, Gallera, La Florida, Miraflores, Salento, and La Frijolera, Colombia.

Pyroderus orenocensis (not of LAFRESNAYE) SCLATER and SALVIN, P.Z.S. Lond., 1879, p. 520—Concordia, Frontino, and Santa Elena, Colombia; SCLATER, Cat. B. Brit. Mus., 14, p. 398, 1888—part, spec. d-f, Concordia.

Range: Subtropical Zone of Western Andes and western slope of Central Andes of Colombia.

3: Colombia (San Antonio 1, Río Lima 1, Miraflores, east of Palmira 1).

Pyroderus scutatus masoni Ridgway.1 Mason's Fruit-Crow.

Pyroderus masoni Ridgway, Auk, 3, p. 333, 1886—"interior of Venezuela," errore; we suggest Pozuzo, dept. Huánuco, Peru (type in U.S.National Museum examined); Chapman, Bull. Amer. Mus. N.H., 33, p. 632, 1914—Peru (crit.).

Pyroderos granadensis (not of LAFRESNAYE) TACZANOWSKI, Orn. Pér., 2, p. 392, 1884—Montañas del Mayro, Peru.

Range: Tropical Zone of eastern Peru, in dept. of Huánuco (Pozuzo; Cushi Libertad; Montaña del Mayro).

Genus CEPHALOPTERUS Geoffroy Saint-Hilaire.

Cephalopterus Geoffroy Saint-Hilaire, Ann. Mus. Hist. Nat. Paris, 13, pp. 235, 238, 1809—type (by monotypy and orig. desig.) Cephalopterus ornatus Geoffroy Saint-Hilaire.

Alticeps Gistel, Naturg. Thierr. Höhere Schulen, p. viii, 1848—new name for Cephalopterus Geoffroy Saint-Hilaire.

rufous; lower abdomen and under tail coverts more deeply black; upper parts, wings, and tail slightly more glossy. Wing (adult male) 230-250; tail 150-160; bill 35-38.

Material examined.—Western Andes: San Antonio 3; Río Lima 5; "Jorne," Cauca Valley 3; Alto de las Ances 1; Antioquia (unspecified) 5.—Central Andes: Miraflores 2.

¹Pyroderus scutatus masoni Ridgway: Most nearly related to P. s. occidentalis, but rather smaller; basal portion of the red-tipped throat feathers deeper in tone; rufous area of under parts much duller, chestnut bay rather than hazel, as well as less extensive, leaving a distinct prepectoral band black; upper parts duller, lacking the iridescent gloss to the margins of the dorsal feathers. Wing 215-234; tail 138-146; bill 36-38.

This race, based on fragments attached to some ethnological specimens from an unknown locality, was at one time believed to be a native of the interior of Venezuela, until F. M. Chapman suggested its Peruvian origin. Many years previously, however, the late W. Hoffmanns had discovered its true habitat by taking specimens in August, 1903 at Cushi Libertad, alt. 1820 meters, and in March, 1904 at Pozuzo, alt. 950 meters, in the dept. of Huánuco, although this finding was never put on record.

Material examined.—Peru, dept. Huánuco: Pozuzo I, Cushi Libertad 6 (Tring Museum and Berlepsch Collection).—Unspecified (including the type) 2.

*Cephalopterus ornatus ornatus Geoffroy Saint-Hilaire. Umbrella-Bird.

Cephalopterus ornatus GEOFFROY SAINT-HILAIRE, Ann. Mus. Hist. Nat. Paris, 13, p. 238, pl. 15, 1809—Brazil; Lesson, Traité d'Orn., livr. 3, p. 161, pl. 41, fig. 2, July, 1830—Brazil; LAFRESNAYE and D'ORBIGNY, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 39, 1837—Bolivia; D'ORBIGNY, Voyage Amér. Mérid., Ois., p. 296, 1839-Río Beni, Bolivia; Tschudi, Untersuch. Faun. Peru., Aves, p. 141, 1846—eastern Peru (anatomy); CABANIS in SCHOM-BURGK, Reisen Brit. Guiana, 3, p. 691, 1848—Canuku Mts.; WALLACE, P.Z.S.Lond., 18, p. 206, 1850—opposite the mouth of the Rio Madeira, in some islands, abundant on the Rio Negro, and in the "Sohuives" [= Solimões] as far as the boundaries of Brazil (habits); Sclater, l.c., 25, p. 18, 1857-Bogotá; idem, l.c., 25, p. 265, 1857-Rio Javarri; idem, l.c., 26, p. 71, 1858-Río Napo, Ecuador; BATES, The Naturalist on the Amazon, 2, pp. 283, 387, 1863—island of Catuá, near Ega, and Fonteboa, Rio Solimões; Schater and Salvin, P.Z.S.Lond., 1866, p. 191-Rio Ucayali; idem, l.c., 1867, p. 581-wooded islands of lower Rio Negro, between Barra and the mouth of the Rio Branco, also on the banks of the Uaupés, above the cataracts; idem, l.c., p. 751-Chyavetas, Peru; Pelzeln, Orn. Bras., 2, p. 135, 1868-Rio Galera, Villa Maria, Caicara, Rio Guaporé, Engenho do Gama, São Vicente, and [Villa Bella de] Matto Grosso), Forte do Principe (Rio Madeira), Forte do Rio Branco, Rio Cauamé, and Serra Caraumán (Rio Branco); SCLATER and SALVIN, P.Z.S.Lond., 1873, p. 286—Cashiboya, Ucayali, and Chyavetas, Peru; TACZANOWSKI, l.c., 1874, p. 541-Monterico, Ayacucho, Peru; Pelzeln, Ibis, 1875, p. 331—"Spanish Guiana" = Bogotá; Sclater and Salvin, P.Z.S.Lond., 1879, p. 618—Tilotilo and Apolobamba, TACZANOWSKI, l.c., 1882, p. 24-Huambo, Peru; idem, Orn. Pér., 2, p. 391, 1884—Peruvian localities; idem and BERLEPSCH, P.Z.S.Lond., 1885. pp. 94, 121-Mapoto, Ecuador; Salvin, Ibis, 1885, p. 306-British Guiana (ex Schomburgk); Sclater, Cat. B. Brit. Mus., 14, p. 399, 1888 (monog.); BERLEPSCH and STOLZMANN, P.Z.S.Lond., 1896, p. 370-Chanchamayo and Borgoña, dept. Junín, Peru; idem, Ornis, 13, p. 114, 1906-Río Cadena, dept. Cuzco, Peru; SALVADORI and FESTA, Boll. Mus. Zool. Torino, 14, No. 362, p. 18, 1899-Río Santiago, San José, and Méndez, Ecuador; BERLEPSCH and HARTERT, Nov. Zool., q, p. 58, 1902 -Samborge and Nericagua, Río Orinoco, Venezuela; IHERING and IHERING, Cat. Faun. Braz., 1, p. 316, 1907 (range); HAGMANN, Zool. Jahrb., (Syst.), 26, p. 32, 1907—Mexiana (?); PENARD and PENARD, Vog. Guyana, 2, p. 177, 1910 (ex Schomburgk); Hellmayr, Nov. Zool., 17, p. 316, 1910, -Forte do Principe and Rio Guaporé, Rio Madeira; Ménégaux, Rev. Franç. d'Orn., 2, p. 8, 1911-Nuevo Loreto, Río Mixiollo, Peru; SNETH-LAGE, Bol. Mus. Goeldi, 8, p. 359, 1914-Rio Purús; Cherrie, Mus. Brookl. Inst., Sci. Bull., 2, p. 256, 1916—Orinoco River, above the Río

¹The describer expressly states that the specimens came from Brazil, and as no record exists for its occurrence either in French or Dutch Guiana, there is no reason to "correct" the type locality to "Cayenne," as was proposed by Berlepsch and Hartert (Nov. Zool., 9, p. 58, 1902) and again by Berlepsch (l.c., 15, p. 143, 1908).

Meta; Chapman, Bull. Amer. Mus. N.H., 36, p. 501, 1917—Florencia and Buenavista, Colombia; Bangs and Noble, Auk, 35, p. 453, 1918—northeast of Perico, Peru; Hellmayr, Arch. Naturg., 85, A, Heft 10, p. 67, 1920—Chaquimayo, dept. Puno, Peru; Chubb, Birds Brit. Guiana, 2, p. 310, 1921—British Guiana (ex Schomburgk); Chapman, Bull. U.S.Nat. Mus., 117, p. 101, 1921—Río Comberciato, Urubamba region, Peru; Hellmayr, Nov. Zool., 32, p. 12, 1925—Bolivia; Chapman, Bull. Amer. Mus. N.H., 55, p. 553, 1926—Zamora, Macas region, and Río Suno, eastern Ecuador; Berlioz, Bull. Mus. Hist. Nat. Paris, 34, p. 72, 1928—San José, Ecuador.

Ampelis umbellata Shaw (and Nodder), Natur. Misc., 21, No. 6, pl. 897, Feb., 1810—new name for Cephalopterus ornatus Geoffroy Saint-Hilaire.

Coracina cephaloptera Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 5, pl. B, fig. 2, 1817—Brazil; idem (and Oudart), Galerie Ois., 1, (2), p. 179, pl. 114, 1823—Brazil; Temminck, Nouv. Rec. Pl. Col., livr. 43, pl. 255, 1824—Brazil.

Coracina ornata Spix, Av. Bras., 1, p. 63, pl. 59, 1824—Fontebôa, Rio Solimões; Burmeister, Syst. Übers. Th. Bras., 2, p. 420, 1856—Brazil.

Range: Amazonia, from the Rio Madeira, Rio Negro, and Rio Branco in northern Brazil, and the upper Orinoco in southern Venezuela west to the eastern base of the Andes in Colombia and Ecuador, south through eastern Peru to Bolivia and western Matto Grosso; casual in British Guiana (one record from the Canuku Mountains).

3: Brazil (Conceição, Rio Branco 1); Colombia (unspecified 1); Peru (Poco Tambo 1).

*Cephalopterus ornatus penduliger Sclater. Long-Wattled Umbrel-La-Bird.

Cephalopterus penduliger Sclater, Ibis, 1, p. 114, pl. 3, 1859—Pallatanga, Ecuador; idem, P.Z.S.Lond., 27, p. 142, 1859—Pallatanga; idem, l.c., 28, p. 67, 1860—Pallatanga; idem, l.c., p. 92, 1860—Nanegal; Berlepsch and Taczanowski, l.c., 1883, p. 560—Chimbo; idem, l.c., 1884, p. 298—El Placer; Sclater Cat. B. Brit. Mus., 14, p. 400, 1888—Pallatanga; Hartert, Nov. Zool., 5, p. 490, 1898—Capal Grande, above Chimbo, and Paramba, Ecuador; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 18, 1899—Río Peripa; Goodfellow, Ibis, 1901, p. 715—Santo Domingo (habits); Ménégaux, Miss. Serv. Géogr. Armée Mes. Arc Mérid. Equat., 9, p. B65, 1911—Santo Domingo; Lönnberg and Rendial, Ark. Zool., 14, No. 25, p. 76, 1922—Río Blanco, below Mindo, and Napa road to Santo Domingo de los Colorados; Chapman, Bull. Amer. Mus. N.H., 36, p. 501, 1917—"Los Tambos" [=Los Jambos], Western Andes, Colombia; idem, l.c., 55, p. 553, 1926—Río de Oro, Manaví, and La Chonta, Ecuador.

Range: Tropical Zone of western Ecuador and western slope of Western Andes of Colombia.

1: Ecuador (Puente de Chimbo 1).

*Cephalopterus ornatus glabricollis Gould. BARE-NECKED UMBRELLA-BIRD.

Cephalopterus glabricollis Gould, P.Z.S.Lond., 18, "1850," p. 92, pl. 20, pub. March, 1851-Cordillera of Chiriquí; CABANIS, Journ. Orn., 9, p. 254, 1861—Costa Rica; Salvin, P.Z.S.Lond., 1867, p. 150—Cordilleras de Tolé and Chiriquí; idem, l.c., 1870, p. 201-Calovevora and Calobre, Veragua; LAWRENCE, Ann. Lyc. Nat. Hist. N.Y., 9, p. 117, 1868—Dota Mts., Angostura, and San José, Costa Rica; Boucard, P.Z.S.Lond., 1878, p. 66—San Carlos and Volcán de Irazú, Costa Rica; ZELEDÓN, An. Mus. Nac. Costa Rica, 1, p. 119, 1887—Turrialba, Naranjo de Cartago, Jiménez, Santa María de Dota, El Zarcéro de Alajuela, Costa Rica; Sclater, Cat. B. Brit. Mus., 14, p. 400, 1888—Turrialba (Costa Rica), Cordillera de Tolé and Calovevora (Veragua); SALVIN and GODMAN, Biol. Centr. Amer., Aves, 2, p. 145, 1891—Costa Rica and Panama; BANGS, Proc. New Engl. Zool. Cl., 3, p. 51, 1902—Boquete, Panama; RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 878, 1907—highlands of Costa Rica and western Panama (monog.); CARRIKER, Ann. Carnegie Mus., 6, p. 661, 1910-La Hondura, La Vijagua, Cariblanco de Sarapiquí, Guacimo, Río Sicsola, El Hogar, Costa Rica; RENDAHL, Ark. Zool., 12, No. 8, p. 23, 1919-Siquirres, Costa Rica.

Range: Costa Rica and western Panama (Chiriquí and Veraguas).

3: Costa Rica (Limón 1, Siquirres 2).

Genus PERISSOCEPHALUS Oberholser.

Gymnocephalus (not of Bloch and Schneider, 1801) Geoffroy Saint-Hilaire, Ann. Mus. Hist. Nat. Paris, 13, p. 237, 1809—type by orig. desig. Corvus calvus Gmelin.

Perissocephalus OBERHOLSER, Proc. Ac. Nat. Sci. Phila., 1899, p. 209—new name for Gymnocephalus Geoffroy Saint-Hilaire preoccupied.

Calvifrons RICHMOND (ex DAUDIN), Proc. U.S.Nat. Mus., 24, p. 671, 1902—type by orig. desig. Corvus calvus GMELIN.

*Perissocephalus tricolor (Müller). CAPUCHIN-BIRD.

Corvus tricolor P.L.S. Müller,² Natursyst., Suppl., p. 85, 1776—based on "Choucas chauve de Cayenne" DAUBENTON, Pl. Enl. 521, Cayenne; Cassin, Proc. Ac. Nat. Sci. Phila., 1864, p. 242 (crit.).

¹Calvifrons Daudin (Ann. Mus. Hist. Nat. Paris, 3, p. 146, 1804), proposed for "Chauvard," an unidentifiable vernacular name, appears to be a nomen nudum.

²Müller's name, although rejected by the late Count Berlersch (Nov. Zool., 15, p. 143, 1908), is of unquestionable pertinence. It was obviously based on Daubenton's plate 521. This figure shows indeed a greenish tinge on the upper parts, which accounts for Müller's misleading expression: "die Hauptfarbe ist grün."

Corvus calvus GMELIN, Syst. Nat., 1, (1), p. 372, 1788—based on DAUBENTON, Pl. Enl. 521, and BUFFON, Cayenne.

Gymnocephalus capucinus Geoffroy Saint-Hilaire, Ann. Mus. Hist. Nat. Paris, 13, p. 237, 1809—new name for Corvus calvus Gmelin; Lesson, Traité d'Orn., p. 359, pl. 41, fig. 1, end of 1830—"Guyane."

Coracina gymnocephala Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 5, 1817—French Guiana.

Ampelis calva Lichtenstein, Verz. Dubl. Berliner Mus., p. 56, 1823—Cayenne (ex Corvus calvus GMELIN).

Gymnocephalus calvus Hahn, Vögel aus Asien, etc., Lief. 2, pl. 4, 1818—Cayenne; Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 690, 1848—British Guiana; Wallace, Trav. Amaz. and Rio Negro, p. 228, 1853—Cobati, Rio Negro; Burmeister, Syst. Übers. Th. Bras., 2, p. 423, 1856—northern Brazil; Bonaparte, Bull. Soc. Linn. Normandie, 2, p. 36, 1857—Cayenne; Sclater and Salvin, P.Z.S.Lond., 1867, p. 581—Guia, Rio Negro; Pelzeln, Orn. Bras., 2, p. 135, 1868—Rio Vaupé, Forte do Rio Branco, and Rio Branco above the Cachoeira, Brazil; Salvin, Ibis, 1885, p. 306—Bartica Grove, Camacusa, and Roraima, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 401, 1888—Cayenne, Maroni River (Surinam), Bartica Grove, Camacusa, Roraima; Ménégaux, Bull. Mus. Hist. Nat. Paris, 10, p. 181, 1904—Camopi and Lunier River, French Guiana; Snethlage, Journ. Orn., 55, p. 292, 1907—Monte Alegre; Penard and Penard, Vog. Guyana, 2, p. 176, 1910—Surinam.

Coracina calva Schomburgk, Reisen Brit. Guiana, 1, p. 415, 1847—Nappi River, Canuku Mts. (call-note).

Calvifrons calvus IHERING and IHERING, Cat. Faun. Braz., I, p. 316, 1907 (range); BERLEPSCH, Nov. Zool., 15, pp. 143, 319, 1908—Ipousin, Approuague River, Cayenne, Camopi, and Lunier River, French Guiana; SNETHLAGE, Bol. Mus. Goeldi, 8, p. 359, 1914—Rio Jary (Santo Antonio da Cachoeira) and Monte Alegre, Brazil; BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 72, 1918—vicinity of Paramaribo, Surinam; Chubb, Birds Brit. Guiana, 2, p. 313, 1921—numerous localities.

Range: French, Dutch, and British Guiana, and northern Brazil, from the confines of the Guianas south to the north bank of the lower Amazon, west to the Rio Negro.

2: British Guiana (Demerara River 2).

Genus GYMNODERUS Geoffroy Saint-Hilaire.

Gymnoderus Geoffroy Saint-Hilaire, Ann. Mus. Hist. Nat. Paris, 13, p. 237, 1809—type by orig. desig. Corvus nudus Gmelin = Gracula foetida Linnaeus.

*Gymnoderus foetidus (Linnaeus). BARE-NECKED GRACKLE.

Gracula foetida Linnaeus, Syst. Nat., 10th ed., 1, p. 108, 1758—"America, Rolander"; we accept Surinam as type locality (ex Berlepsch and Hartert, Nov. Zool., 9, p. 58, 1902).

- Corvus nudicollis Boddaert, Tabl. Pl. Enl., p. 37, 1783—based on "Le Colnud, de Cayenne" Daubenton, Pl. Enl. 609, Cayenne.
- Corvus nudus GMELIN, Syst. Nat., 1, (1), p. 371, 1788—based on BUFFON and DAUBENTON, Pl. Enl. 609, Cayenne.
- Gymnoderus cayennensis Geoffroy Saint-Hilaire, Ann. Mus. Hist. Nat. Paris, 13, p. 237, 1809—new name for Corvus nudus Gmelin.
- Coracina gymnodera VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 6, 1817—"Guyane"; idem (and OUDART), Galerie Ois., 1, (2), p. 178, pl. 112, 1823—"la Guyane."

Gymnoderus foetidus CABANIS in SCHOMBURGK, Reisen Brit. Guiana, 3, p. 691, 1848—Canuku Mountains; BURMEISTER, Syst. Übers. Th. Bras., 2, p. 425, 1856-northern Brazil; BONAPARTE, Bull. Soc. Linn. Guyana, 2, p. 178, 1910-Surinam; HELLMAYR, Nov. Zool., 17, p. 317, 1910—Calama, Rio Madeira; idem, Abhandl. Bayr. Ak. Wiss., Math.-phys. Kl., 26, No. 2, p. 120, 1912 -Mexiana (ex Hagmann); Snethlage, Bol. Mus. Goeldi, 8, p. 359, 1914-Pará, Quati-purú, Rio Purús (Monte Verde), Mexiana, and Monte Alegre, Brazil; CHERRIE, Mus. Brookl. Inst., Sci. Bull., 2, p. 256, 1916-Orinoco River, above the mouth of the Río Meta; BANGS and PENARD, Bull. Mus. Comp. Zool., 62, p. 72, 1918—vicinity of Paramaribo, Surinam; CHUBB, Birds Brit. Guiana, 2, p. 314, 1921—upper Takutú Mountains, Berbice River, and Canuku Mountains; CHAPMAN, Bull. Amer. Mus. N.H., 55, p. 553, 1926—eastern Ecuador; Young, Ibis, 1929, p. 233— Blairmont, British Guiana.

Range: French, Dutch and British Guiana; southern Venezuela (upper Orinoco); and the whole of the Amazon Valley and its tribu-

taries from Pará west to eastern Ecuador and eastern Peru, south to western Matto Grosso and northern Bolivia.

1: Peru (Yurimaguas 1).

Genus PROCNIAS Illiger.

- Procnias Illiger, Prodr. Syst. Mamm. et Av., p. 228, 1811—type by subs. desig. (GRAY, List Gen. Birds, p. 34, 1840) "P. variegatus (L.) Ill." = Ampelis variegata GMELIN = Ampelis averano HERMANN.
- Casmarhinchos TEMMINCK, Man. d'Orn., 2nd ed., 1, p. LXIII, 1820—type by subs. desig. (Sclater, Cat. Birds Brit. Mus., 14, p. 403, 1888) Ampelis variegata GMELIN = Ampelis averano HERMANN.
- Casmarhynchos TEMMINCK, Nouv. Rec. Pl. Col., livr. 9, pl. 51, 1821—type by monotypy "Casmarhynchos variegatus" = Ampelis carnobarba Cuvier.
- Averano Anonymous, Cat. Coll. Cabinet Riocour, p. 17, 1829—type by subs. desig. (ZIMMER, Field Mus. Nat. Hist., Zool. Ser., 16, p. 12, 1926) "Averano caronculatus" = Ampelis alba HERMANN.
- Arapunga Lesson, Traité d'Orn., livr. 5, p. 365, end of 1830—type by subs. desig.(Sclater, Cat. Birds Brit. Mus., 14, p. 403, 1888) Ampelis nudicollis Vieillot.
- Eulopogon Gloger, Gemeinütz. Hand- und Hilfsbuch Naturg., 1, p. 321, 1841—type by monotypy Ampelis variegata VIEILLOT (not of GMELIN) = Ampelis carnobarba Cuvier.
- Vavasouria Chubb, Bull. Brit. Orn. Cl., 40, p. 107, 1920—type by orig. desig. Ampelis nivea Boddaert = Ampelis alba Hermann.
- Calloprocnias Chubb, Bull. Brit. Orn. Cl., 40, p. 107, 1920—type by orig. desig. Chasmorhynchus tricarunculatus J. and E. Verreaux.

*Procnias alba (Hermann). WHITE BELL-BIRD.

- Ampelis alba Hermann, Tab. Affin. Anim., p. 213, note, 1783—based on "Le Guira Panga ou Cotinga Blanc" Montbelllard in Buffon, Hist. Nat. Ois., 4, p. 454, Cayenne.
- Ampelis nivea Boddaert, Tabl. Pl. Enl., p. 49, Dec., 1783—based on "Cotinga Blanc, de Cayenne" DAUBENTON, Pl. Enl. 793 (male), 794 (female).
- Ampelis carunculata GMELIN, Syst. Nat., 1, (2), p. 841, 1789—based on "Le Cotinga Blanc" Brisson (Orn., 2, p. 356) and Buffon, Cayenne; R. H. Schomburgk, Reisen Brit. Guiana and Orinoco, p. 197, 1841—junction of the Rivers Moschieba and Berbice, three days' journey above New Amsterdam, Brit. Guiana.
- Chasmarhynchos carunculatus Schomburgk, Reisen Brit. Guiana, 1, pp. 343, 430, 1847—Canuku Mountains (habits, call-note).
- Chasmarhynchus carunculatus Cabanis in Schomburgk, Reisen Brit. Guiana, 3, p. 692, 1848—Demerara, Berbice, and Canuku Mountains (habits); Burmeister, Syst. Übers. Th. Bras., 2, p. 427, 1856—Guyana.

- Casmarhynchos carunculata (us) WALLACE, Travels Amaz. and Rio Negro, p. 132, 1853—"seen" at Nazaré, near Pará; C. B. Brown, Canoe and Camp Life Brit. Guiana, p. 181, 1876—Surama Landing, Burroburro River (habits).
- Procnias nivea Léotaud, Ois. Trinidad, p. 261, 1866—"Trinidad"; Sclater, Ibis, 1867, p. 108—occurrence in Trinidad questioned.
- Chasmorhynchus niveus Cabanis and Heine, Mus. Hein., 2, p. 108, 1859—Guiana; Sclater, Cat. Coll. Amer. Birds, p. 258, 1862—Cayenne; Salvin, Ibis, 1865, p. 92—Cayenne (descr.); Sclater and Salvin, P.Z.S.Lond., 1867, p. 580—Rio Negro, about twenty miles above Barra [=Manáos], also "seen" near Pará; Pelzeln, Orn. Bras., 2, p. 134, 1868—Barcellos, Rio Negro; Finsch, P.Z.S.Lond., 1870, p. 574—"Trinidad"; Salvin, Ibis, 1885, p. 306—Bartica Grove, Merumé Mts., Atapurow River, Roraima, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 403, 1888—Cayenne, Surinam, Bartica Grove, Carimang River, Atapurow River, Merumé Mts., Roraima, "Venezuela"; Ihering and Ihering, Cat. Faun. Braz., 1, p. 316, 1907—Guiana and Lower Amazonia; Berlepsch, Nov. Zool., 15, p. 143, 1908—Cayenne; Penard and Penard, Vog. Guyana, 2, p. 179, 1910—Surinam.

Chasmorhynchus albus Sclater, Ibis, 1866, p. 407-Guiana.

Procnias alba Stresemann, Nov. Zool., 27, p. 330, 1920 (crit.).

Vavasouria alba Chubb, Birds Brit. Guiana, 2, p. 320, 1921—British Guiana (numerous localities).

Range: French, Dutch, and British Guiana, and adjacent parts of northern Brazil (Rio Negro).¹

3: British Guiana (Demerara River 2).

*Procnias nudicollis (Vieillot). NAKED-THROATED BELL-BIRD.

- Ampelis nudicollis VIEILLOT, Nouv. Dict. Hist. Nat., nouv. éd., 8, p. 164, 1817—"le Brésil" (descr. of male and female; types in Paris Museum examined).
- Procnias ventralis HAHN, Vogel aus Asien, Afrika, etc., Lief. 7, pl. 2, 1820—Brazil.
- Cotinga alba (not Ampelis alba Hermann, 1783) Thunberg, Mém. Soc. Imp. Natur. Moscou, 6, p. 177, 1823—Brazil (descr. of male).
- Casmarhynchus ecarunculatus SPIX, Av. Bras., 2, p. 3, pl. 4, 1825—Rio de Janeiro (type in Munich Museum examined; = male); Hellmayr, Abhandl. 2. Kl. Bayr. Ak. Wiss., 22, No. 3, p. 639, 1906 (crit.).
- Procnias nudicollis Wied, Reise Bras., 1, p. 52 (8vo ed., p. 51), 60 (8vo ed., p. 59), 1820—Serra de Inua and Guaripana, near Rio; idem, l.c., 2, p. 158, 1821—Rio Pardo, southern Bahia; Descourtilz, Orn. Brés., p. 24, pl. 27, fig. 2 (=male), circa 1856—Brazil (habits); Dabbene, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 432, 1910—Puerto Bertoni, Paraguay; Bertoni, Faun. Parag., p. 58, 1914—Puerto Bertoni.

¹There is no reliable record of its occurrence in Trinidad, Venezuela, or Pará.

Casmarhynchos nudicollis Temminck, Nouv. Rec. Pl. Col., livr. 62, pl. 368 (male), 383 (female), 1825—eastern Brazil; Wied, Beitr. Naturg. Bras., 3, (1), p. 377, 1830—near Rio de Janeiro and Cabo Frio, and in Bahia at Barra da Vareda, Rio Pardo, etc.; A. de Saint-Hilaire, Voyage prov. Rio de Janeiro et Minas Geraes, 1, pp. 16-17, 1830—Rio, Espirito Santo, and Minas Geraes (descr. habits); idem, Voyage distr. des Diamants et Litt. du Brésil, 1, p. 107, 1833—Fazenda d'Ocubas, Serra da Lappa, Minas Geraes; idem, Voyage aux sources du Rio San-Francisco et prov. Goyaz, 1, p. 26, 1847—between Ubá and Rio Parahyba, Rio.

Procn[ias] araponga ("Pr. Max" MS.) Cuvier, Régne Anim., nouv. éd., 1, p. 364, 1829—new name for Temminck, Nouv. Rec. Pl. Col., pls. 368, 383, Brazil.

Arapunga nudicollis Lesson, Traité d'Orn., livr. 5, p. 365, end of 1830—Brazil.

Arg., 75, p. 94, 1913-Misiones; Dabbene, Bol. Soc. Physis, 1, p. 350, 1914—Paraguay.

Procnias averano (not of HERMANN) HELLMAYR, Nov. Zool., 27, p. 329, 1920 (crit.).

Range: Wooded region of southeastern Brazil, from southern Bahia and Minas Geraes to Rio Grande do Sul, and adjacent parts of Argentina (Misiones) and eastern Paraguay (Puerto Bertoni).

1: "Brazil."

*Procnias averano averano (Hermann). Marcgrave's Black-WINGED Bell-BIRD.

Ampelis Averano Hermann, Tab. Affin. Anim., pp. 211, 214, 1783—based on "L'Averano" Buffon (Hist. Nat. Ois., 4, p. 457, 1778) ex "Guirapunga,"

¹Variously spelled Chasmarhynchus, Chasmorhynchus, and Chasmorhynchos.

240 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

- MARCGRAVE, Hist. Nat. Bras., p. 201—northeastern Brazil (descr. of male in change of plumage).
- Ampelis variegata GMELIN, Syst. Nat., 1, (2), p. 841, 1789—same basis; LICHTENSTEIN, Abhandl. Ak. Wiss. Berlin, Phys. Kl., for 1816-17, p. 164, 1819—note on "Guirapunga" of MARCGRAVE.
- Procnias averano averano Hellmayr, Field Mus. Nat. Hist. Pub., Zool. Ser., 12, p. 345, 1929—Grajahú and Tranqueira, Maranhão (crit.).

Range: Northeastern Brazil, in state of Maranhão, extending without doubt into some of the neighboring provinces.

5: Brazil, Maranhão (Grajahú 1, Tranqueira 4).

Procnias averano carnobarba (Cuvier). BLACK-WINGED BELL-BIRD.

- Ampelis carnobarba Cuvier, Règne Animal, 4, p. 172, pl. 4, fig. 4 (=adult male), 1817—no locality stated (the type, examined in the Paris Museum, was obtained by Robin on the island of Trinidad).
- Averano carnobarba Lesson, Traité d'Orn., livr. 5, p. 365, pl. 52, fig. 1, end of 1830—Trinidad (descr. of male and female).
- Ampelis variegata (not of GMELIN) VIEILLOT (and OUDART), Galerie Ois., 1, (2), p. 184, 1823—no locality stated (descr. of male and female, excl. Marcgrave's account).
- Ampelis averano (not of HERMANN) VIEILLOT (and OUDART), Galerie Ois., 1, (2), pl. 117, 1823 (=adult male).
- Procnias lumbriciferus GISTEL, Naturg. Thierr. Höh. Schulen, p. 90, 1848— "in Wäldern Brasiliens," errore (descr. of male and female).
- Casmarhynchos variegatus TEMMINCK, Nouv. Rec. Pl. Col., livr. 9 pl. 51 (= male), 1821—"Brésil," errore.
- Chasmarhynchus variegatus Burmeister, Syst. Übers. Th. Bras., 2, p. 428, 1856 (descr.).
- Chasmorhynchus variegatus Cabanis and Heine, Mus. Hein., 2, p. 107, 1859
 —Puerto Cabello, Venezuela; Salvin, Ibis, 1865, p. 91—"Brazil" (descr.);
 Sclater, l.c., 1866, pp. 406, 407—Valencia, Venezuela and Bande de l'Est,
 Trinidad; Sclater and Salvin, P.Z.S.Lond., 1868, pp. 168, 172—forest
 of Casuaré, Nueva Andalucía, Venezuela; idem, l.c., 1868, p. 628—San
 Esteban, Venezuela; Goering, l.c., 1869, p. 251—San Esteban; Sclater,
 Ibis, 1869, p. 462—near the Arapu River, one day's journey from Mount
 Roraima, British Guiana (call-note); Salvin, Cat. Strickland Coll., p.
 331, 1882—Guiana, Venezuela, Trinidad; idem, Ibis, 1885, p. 306—
 Roraima, British Guiana; Sclater, Cat. B. Brit. Mus., 14, p. 405, 1888
 —Roraima, San Esteban; Chapman, Bull. Amer. Mus. N.H., 6, p. 47,

¹Procnias averano carnobarba (Cuvier): Very similar to P. averano averano, but body plumage of adult male grayish (pale gull gray to pallid neutral gray) instead of pure white.

Material examined.—Trinidad: Heights of Aripo 12, unspecified (the type) 1.—Venezuela: San Esteban 2.—British Guiana: Roraima 2.

1894—Trinidad; idem, l.c., 7, p. 323, 1895—Caparo and Caura Valley, Trinidad; Hellmayr, Nov. Zool., 13, p. 28, 1906—Aripo, Caparo, and Valencia, Trinidad.

Chasmorhynchus niveus (not Ampelis nivea BODDAERT) TAYLOR, Ibis, 1864, p. 88—Trinidad.

Procnias variegata Descourtilz, Orn. Brés., p. 25, pl. 27, fig. 3 (=male), circa 1856—"Brésil" (errore); Léotaud, Ois. Trinidad, p. 259, 1866—Trinidad; Hellmayr and Seilern, Arch. Naturg., 78, A, Heft 5, p. 165, 1912—San Esteban, Venezuela.

Casmorhynchus variegatus C. Brown, Canoe and Camp Life in Brit. Guiana, p. 123, 1876—common from the Cotinga to Roraima, rare east of the Cotinga.

Procnias carnobarba Hellmayr, Nov. Zool., 27, p. 330, 1920 (crit.); Chubb, Birds Brit. Guiana, 2, p. 317, 1921—Mount Roraima and Cotinga River.

Range: Mountains of western British Guiana (from the Cotinga to Roraima, rare farther east), Trinidad, and northern Venezuela (from Sucre to Carabobo).

*Procnias tricarunculata (J. and E. Verreaux). Costa Rican Bell-Bird.

Casmarhynchus tricarunculatus J. and E. Verreaux, Rev. Mag. Zool., (2), 5, p. 193, 1853—"Bocos del Toro (Nouvelle Grenade)" = north side of Isthmus of Panama.

Chasmorhynchus tricarunculatus Salvin, Ibis, 1865, pp. 90-95, pl. 3—Costa Rica (crit.); idem, P.Z.S.Lond., 1867, p. 150—Santiago de Veragua and Cordillera de Tolé, Veragua; idem, l.c., 1870, p. 200—Calovevora, Veragua; Lawrence, Ann. Lyc. Nat. Hist. N.Y., 9, p. 117, 1868—"San José," Dota, Cervantes, and Turrialba, Costa Rica; Boucard, P.Z.S.Lond., 1878, p. 66—Volcán de Irazú, Costa Rica; Ridgway, Proc. U.S.Nat. Mus., 5, p. 496, 1882—Volcán de Irazú; Sclater, Cat. B. Brit. Mus., 14, p. 405, 1888—Costa Rica, Chiriquí, Veragua; Salvin and Godman, Biol. Centr.-Amer., Aves, 2, p. 142, 1891—Costa Rica and Panama; idem, Ibis, 1892, p. 327—Matagalpa, Nicaragua; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 339, p. 6, 1899—Chiriquí; Bangs, Auk, 18, p. 365, 1901—Divala, Panama; idem, Proc. New Eng. Zool. Cl., 3, p. 51, 1902—Boquete, Chiriquí; idem, Auk, 24, p. 303, 1907—Pozo del Rio Grande, Costa Rica.

Procnias tricarunculata RIDGWAY, Bull. U.S.Nat. Mus., 50, Part 4, p. 883, 1907—Nicaragua to Panama (monog., full bibliography); FERRY, Field Mus. Nat. Hist., Orn. Ser., 1, p. 269, 1910—Volcán de Turrialba, Costa Rica; Carriker, Ann. Carnegie Museum, 6, p. 660, 1910—La Estrella, Azahar de Cartago, Turrialba, Pozo Azul de Pirris, Cariblanco de Sarapiquí, Guapiles, Irazú, El Hogar, Costa Rica; Kennard and Peters, Proc. Boston Soc. N.H., 38, p. 458, 1928—Almirante, Panama.

Range: Highlands of Nicaragua, Costa Rica, and Panama.

242 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

21: Nicaragua (San Rafael del Norte 4); Costa Rica (Limón 7, Volcán de Turrialba 7, Térraba 1, unspecified 2).

FAMILY RUPICOLIDAE.

COCKS-OF-THE-ROCK.

Genus RUPICOLA Brisson.

Rupicola Brisson, Orn., 4, p. 437, 1760—type by monotypy "Rupicola" = Pipra rupicola Linnaeus.

*Rupicola rupicola (Linnaeus). Cock-of-the-Rock.

Pipra rupicola Linnaeus, Syst. Nat., 12th ed., 1, p. 338, 1766—based on "Rupicola" Brisson (Orn., 4, p. 437, pl. 34, fig. 1, 1760, "Surinam et toute la Guyane"), "The Hoopoe Hen" Edwards (Glean. Nat. Hist., 2, pl. 264, fig. 2, Surinam), and "Gallus ferus saxatilis" Barrère (Essai Hist. Nat. France Équin., p. 132, "Cayenne"); we accept French Guiana as type locality.

Pipra rubicolla Meuschen, Mus. Geversianum, p. 46, 1787—no locality stated; Walch (Naturforscher, 11, p. 5, 1777) gives "Cayenne" for the specimen in the Gevers Collection.

Rubicola crocea Bonnaterre, Tabl. Enc. Méth., Orn., 1, livr. 51, p. 266, 1792—based on "Le Coq de Roche" Buffon (Hist. Nat. Ois., 5, p. 157— "dans la montagne Luca, près d'Oyapoc, et dans la montagne Courouaye, près de la rivière d'Aprouack") and "Felsenhahn" WALCH (Naturforscher, II, p. 5, pl. I, 1777, "Cayenne"), French Guiana; CABANIS in SCHOM-BURGK, Reisen Brit. Guiana, 3, p. 694, 1848-Canuku Mountains and Avarimatta, Wenamu River, upper Cuyuni; Burmeister, Syst. Übers. Th. Bras., 2, p. 437, 1856—northern districts of Brazil; Gould, P.Z.S. Lond., 27, p. 99, 1859—"Cayenne" and Demerara (crit.); Sclater and SALVIN, 1.c., 1867, p. 580-Serra de Cobati, Rio Negro; PELZELN, Orn. Bras., 2, p. 131, 1868-Forte do São Gabriel and Cocuy, above Marabitanas, Rio Negro; Salvin, Ibis, 1885, p. 304-Camacusa, Merumé Mts., and Atapurow River, British Guiana; SCLATER, Cat. B. Brit. Mus., 14, p. 369, 1888—Carimang River, Merumé Mts., Atapurow River, Camacusa, Demerara, British Guiana, "Cayenne," and Guía, Rio Negro; LLOYD, Timehri, (n.s.), 9, p. 231, 1895-Pirara River, British Guiana (nest and egg descr.); idem, Ibis, 1896, p. 429 (reprint); MÉNÉGAUX, Bull. Mus. Hist. Nat. Paris, 10, p. 181, 1904—Ouanary, French Guiana (descr. of young male); PENARD and PENARD, Vog. Guyana, 2, p. 165, 1910-interior of Surinam (habits).

Rupicola aurantia Vieillot, Nouv. Dict. Hist. Nat., nouv. éd., 29, p. 551, 1819—new name for Pipra rupicola Linnaeus; "Montagne Courouaye, près de la rivière d'Aprouack," French Guiana; idem (and Oudart), Galerie Ois., 1, (2), p. 316, pl. 189, 1824—same locality; Schomburgk, Naumaunia, 1, Heft 2, pp. 34-38, 1850—British Guiana (habits); Descourtilz, Orn. Brés., p. 34, pl. 38, fig. 2, 1856—Brazil.

- Rupicola elegans Stephens in Shaw, Gen. Zool., 13, (2), p. 257, 1826—new name for Pipra rupicola Linnaeus; R. H. Schomburgk, Reisen in Guiana und am Orinoko, pp. 332, 446, 1841—Canuku Range, British Guiana and mountains at the sources of the Río Padamo, Venezuela.
- Rupicola cayana Swainson, Classif. Birds, 2, p. 253, 1837—based on Daubenton, Pl. Enl. 39, French Guiana; Wallace, Trav. Amazon and Rio Negro, p. 474, 1853—range confined to granite formation.

Range: Mountain ranges of French, Dutch, and British Guiana, southern Venezuela (Caura, Orinoco, and Padamo rivers), and northern Brazil (Rio Negro; Campos de Ariramba, north of the lower Amazon).

- 3: French Guiana ("Cayenne" 1); British Guiana (Roraima 1, unspecified 1).
- *Rupicola peruviana sanguinolenta Gould.2 BLOOD-RED COCK-OF-THE-ROCK.
 - Rupicola sanguinolenta Gould, P.Z.S.Lond., 27, pp. 90, 100, 1859—"Quito," Ecuador; Sclater, l.c., 28, p. 91, 1860—Nanegal; Sclater and Salvin, Exotic Orn., p. 29, pl. 15, 1867—western Ecuador; idem, P.Z.S.Lond., 1879, p. 519—Concordia and Frontino, Colombia (habits; eggs descr.); Sclater, Cat. B. Brit. Mus., 14, p. 371, 1888—"Quito," Intac, Concordia, and near Medellín; Allen, Bull. Amer. Mus. N.H., 2, p. 74, 1889—Milligalli; Hartert, Nov. Zool., 5, p. 490, 1898—Milligalli; Salvadori and Festa, Boll. Mus. Zool. Torino, 14, No. 362, p. 17, 1899—Intac and Gualea; Goodfellow, Ibis, 1901, p. 712—Gualea and Milligalli (habits);

¹Material examined.—French Guiana: "Cayenne" 5, Ouanary 1.—British Guiana 7.—Brazil: Rio Negro (São Gabriel and Cocuy) 10.

²Rupicola peruviana sanguinolenta, while separated from the range of R. p. aequatorialis by the intervening Cauca Valley, is clearly but an intensely colored race, the gap between the two forms being to a certain extent bridged by R. p. saturata, of Bolivia and southern Peru.

Birds from the Western Andes of Colombia appear to be inseparable, though they average slightly darker, while the crest is often not quite so long.

Material examined.—Colombia: La Florida 1, Castilla 1, Riolima 8, San Pablo 6.—Ecuador: Gualea 8, Milligalli 7, Nanegal 1, Nono 2.

 - Pipra peruviana (not of LATHAM) GOUDOT, Mag. Zool., (2), 5, text to pls. 67-68, pp. 1-4, 1843-Río Combayma, Central Cordillera of Colombia (habits).

¹Rupicola peruviana aequatorialis TACZANOWSKI: Similar to R. p. peruviana, but general coloration of males deeper orange and the gray on the apical portion of the tertials more restricted, not wholly concealing the blackish basal area.

The range of this form apparently extends south to northern Peru. Two adult males from Huayabamba, when compared with a large series from more northern localities, agree in the pattern of the tertials, but are perhaps—if anything—very slightly paler, less orange, than the majority from Colombia and Ecuador. Bogotá skins exhibit a large amount of variation, as far as intensity of coloration is concerned, and certain specimens closely approach sanguinolenta.

Material examined.—Colombia: Bogotá 14; Bucaramanga 1; San Agustín 2; La Palma 1.—Ecuador: below Baeza 6, near Bãnos 3.—Peru: Huayabamba,

dept. San Martín 5.

Rupicola peruviana peruviana HELLMAYR, Nov. Zool., 34, p. 11, 1925—northern Peru to Colombia.

Range: Extreme western Venezuela (San Cristóbal, state of Táchira); Central and Eastern Andes of Colombia; eastern Ecuador; and northern Peru, south to depts. Amazonas and San Martín (Chyavetas; Huayabamba; Nuevo Loreto, Río Mixiollo).

5: Colombia (Bogotá 2; La Palma, Huila 1; near San Agustín, Huila 2).

*Rupicola peruviana peruviana (Latham). Peruvian Cock-of-the-Rock.

Pipra peruviana Latham, Ind. Orn., 2, p. 555, 1790—based on "Le Coq-de-Roche du Pérou" Buffon, Hist. Nat. Ois., 4, p. 437, and Daubenton, Pl. Enl. 745, Peru; Chanchamayo, dept. Junín, suggested as type locality by Chapman (Bull. Amer. Mus. N.H., 55, p. 547, 1926).

'It is with considerable reluctance that I follow Dr. F. M. Chapman in the disposition of the name peruviana, since Buffon's specimen, the sole basis of Latham's description, is far more likely to have come from northern Peru (Maynas) than from the central provinces, then practically unknown. As explained elsewhere (Arch. Naturg., 85, A, Heft 10, p. 66, 1920), I do not attach much importance to the absence of the black portion of the tertials in Daubenton's plate 745, a feature that might easily be concealed in a mounted specimen. Since, however, the type no longer exists in the Paris Museum, it is perhaps preferable to accept Chapman's designation of Chanchamayo as final rather than to rename the central-Peruvian form.

246 FIELD MUSEUM OF NATURAL HISTORY—ZOOLOGY, VOL. XIII.

Rupicola peruviana Dumont, Dict. Sci. Nat., 46, p. 453, 1827—Peru (ex Buffon); Taczanowski, P.Z.S.Lond., 1874, p. 540—Soriano, dept. Junín, and (?) Monterico, dept. Ayacucho; idem, Orn. Pér., 2, p. 373, 1884—part, Soriano and (?) Monterico; Berlepsch and Stolzmann, P.Z.S. Lond., 1896, p. 369—La Gloria, Garita del Sol, and San Emilio, dept. Junín.

Rupicola peruana Tschudi, Untersuch. Fauna Peru., Aves, p. 142, 1846—Peru, unquestionably dept. Junín.

Range: Central Peru, in depts. of Huánuco and Junín, possibly also Ayacucho (Monterico, east of Huanta).¹

5: Peru, dept. Huánuco (Chinchao 2; Huachipa 2; mouth of Cayumba River 1).

Rupicola peruviana saturata Cabanis and Heine.² Bolivian Cockof-the-Rock.

Rupicola saturata Cabanis and Heine, Mus. Hein., 2, p. 99, 1859—Bolivia. Rupicola peruviana (not of Latham) Lafresnaye and d'Orbigny, Syn. Av., 1, in Mag. Zool., 7, cl. 2, p. 38, 1837—Yungas and Yuracares, Bolivia; d'Orbigny, Voyage Amér. Mérid., Ois., p. 294, 1839—Yungas and east of Cochabamba, Bolivia; Sclater, P.Z.S.Lond., 23, p. 152, 1855—part, Bolivia; Sclater and Salvin, l.c., 1869, p. 598—Cosnipata, dept. Cuzco, Peru; idem, l.c., 1879, p. 618—Yungas, Cochabamba, Simacu, and Tilotilo, Bolivia; Sclater, Cat. B. Brit. Mus., 14, p. 370, 1888—part, spec. r-v, Simacu and Tilotilo, Bolivia.

Rupicola peruviana saturata Berlepsch and Stolzmann, Ornis, 13, pp. 90, 114, 1906—Idma, above Santa Ana, Urubamba, and Huaynapata, Marcapata, dept. Cuzco, Peru; Hellmayr, Arch. Naturg., 85, A, Heft 10, p. 66, 1920—Chaquimayo, dept. Puno, Peru (crit.); idem, Nov. Zool., 32, p. 11, 1925—southeastern Peru and Bolivia.

Rupicola peruviana peruviana Chapman, Bull. U.S.Nat. Mus., 117, p. 100, 1921—Huiro, Idma, and San Miguel Bridge, Urubamba, Peru.

Range: Southeastern Peru (in depts. of Cuzco and northern Puno) and northern Bolivia (Yungas of La Paz and Cochabamba).

¹Material examined.—Peru: Chinchao 2, Huachipa 2, mouth of Cayumba River 1; La Gloria, Chanchamayo 2, Vitoc 4.

²Rupicola peruviana saturata CABANIS and HEINE: Similar to R. p. peruviana in pattern of tertials, but coloration of males much redder, flame scarlet rather than orange chrome.

Birds from Cuzco and Marcapata agree with Bolivian specimens, while those from Idma, by slightly lighter coloring, diverge in the direction of the typical form.

Material examined.—Bolivia: Locotal, Yungas of Cochabamba 5; Songo, Yungas of La Paz 16.—Peru: Marcapata 5; Callanga, Cuzco 12; Ocobamba, Cuzco 1; Chaquimayo, Puno 1.

San José, Uruguay; Sanborn, Auk, 46, p. 251, 1929-Estancia Concordia, s. w. of Dolores, Soriano, Uruguay.

Phytotoma rutila rutila Peters, Bull. Mus. Comp. Zool., 65, p. 326, 1923—Río Colorado, Argentina; Friedmann, l.c., 68, p. 209, 1927—Concepción, Tucumán.

Phytotoma angustirostris (not of LAFRESNAYE and D'ORBIGNY) LILLO, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 8, p. 188, 1902—vicinity of Tucumán; BAER, Ornis, 12, p. 221, 1904—Tapia, Tucumán (spec. examined); LILLO, Rev. Letr. Cienc. Soc., 3, p. 51, 1905—vicinity of Tucumán.

Range: Argentina, from the Río Negro north to Catamarca, Tucumán, Chaco, Formosa, and Corrientes; the Paraguayan Chaco; Uruguay.¹

¹Specimens from eastern Argentina (Barracas al Sud, Buenos Aires; Corrientes) and Uruguay agree well together. All the birds I have seen from Córdoba and Tucumán are likewise referable to P. r. rutila. Certain examples with more white than usual on the lateral rectrices have no doubt given rise to the reported occurrence of P. angustirostris in northwestern Argentina. I have examined two skins from Tapia, Tucumán, so identified by the late G. A. Baer. They are, however, much smaller and have less white in the tail than a Bolivian series, and as the majority from Tucumán are identical with the average from eastern Argentina, they must undoubtedly go with rutila.

Material examined.—Uruguay: Near Dolores, Soriano 1.—Argentina: Corrientes 1; Barracas al Sud, Buenos Aires 4; Santa Elena, Entre Rios 1; Mendoza 1; Cosquin, Córdoba 3; Tapia, Tucumán 6; Concepción, Tucumán 21.

250 FIELD MUSEUM OF NATURAL HISTORY-ZOOLOGY, VOL. XIII.

22: Uruguay (Estancia Concordia, s. w. of Dolores, dept. Soriano 1); Argentina (Concepción, Tucumán 21).

*Phytotoma rutila angustirostris Lafresnaye and d'Orbigny. BOLIV-IAN PLANT-CUTTER.

Phytotoma angustirostris LAFRESNAYE and D'ORBIGNY, Syn. Av., I, in Mag. Zool., 7, cl. 2, p. 37, 1837—La Paz, Bolivia (types in Paris Museum examined); D'Orbigny, Voyage Amér. Mérid., Ois., p. 292, pl. 29, fig. 2, 1839—La Paz, Cavari, Enquisivi, Palca, Sicasica, Ayupaya, Cochabamba, Mizque, Chuquisaca, Bolivia; Sclater and Salvin, P.Z.S.Lond., 1879, p. 619-Tilotilo, Yungas, and d'Orbigny's localities, Bolivia; SCLATER, Cat. B. Brit. Mus., 14, p. 407, 1888—Tilotilo, La Paz; (?) SALVADORI, Boll. Mus. Zool. Torino, 10, No. 208, p. 12, 1895-Chilcas, Salta; (?) idem, l.c., 12, No. 292, p. 17, 1897—Tala and Cara-huassi, Salta; LÖNNBERG, Ibis, 1903, p. 455-San Luís, Tarija, Bolivia; (?) DABBENE, Anal. Mus. Nac. Hist. Nat. Buenos Aires, 18, p. 349, 1910—Salta; HELLMAYR, Nov. Zool., 32, p. 10, 1925—La Paz, Bolivia (note on types).

(?) Phytotoma rutila (not of VIEILLOT?) BRUCH, Rev. Mus. La Plata, II, p. 256, 1904-Orán, Salta.

Range: Mountainous parts of Bolivia, from La Paz to Tarija, and (?) extreme northwestern Argentina (prov. Salta).

7: Bolivia (Parotani, dept. Cochabamba 7).

Phytotoma raimondii Taczanowski, PERUVIAN PLANT-CUTTER.

Phytotoma raimondii TACZANOWSKI, P.Z.S.Lond., 1883, p. 71, pl. 17 (male)— Túmbez, northwestern Peru; idem, Orn. Pér., 2, p. 395, 1884—Túmbez; SCLATER, Cat. B. Brit. Mus., 14, p. 408, 1888-Túmbez; Allen, Bull. Amer. Mus. N.H., 2, p. 88, 1889—"Valparaiso, Chile" (errore).

Range: Littoral of northwestern Peru, in depts. of Túmbez (Túmbez) and Libertad (Trujillo; Virú).

¹Phytotoma rutila angustirostris LAFRESNAYE and D'ORBIGNY: Very similar to P. r. rutila, but larger, with stronger bill; lateral tail feathers more broadly tipped with white. Wing 94-100, (female) 94-97 (against 83-89, in P. r. rutila); tail 88-94, (female) 85-89; bill 12-13.

Sclater is quite wrong in describing the under parts of this form as "brownish red," since these parts, in the adult male, are just as deep cinnamon rufous as in the typical race. The larger size and the longer white tips to the tail, however,

serve to distinguish it from its southern ally.

It is somewhat questionable whether P. r. angustirostris really extends into Argentina, since Salvadori, in referring Salta specimens to the present form, may have been misled by Sclater's key. In the absence of material, I am unable to decide the point.

Material examined.—Bolivia: La Paz (including the types) 13; Parotani, Cochabamba 7; Valle Grande 4; Samaipata 1.

²Phytotoma raimondii Taczanowski: Readily distinguished from P. rutila angustirostris by its much more elongated bill; by lacking in the male sex the cinnamon rufous frontal patch and by having the foreneck, chest, and sides of the breast extensively mouse gray (instead of cinnamon rufous like the rest of the under parts). Wing 93, (female) 90; tail 90, (female) 82-84; bill 14.

Material examined.—Peru, dept. Libertad: Trujillo 1; Virú 2.

Bold-faced type denotes names adopted in this work.
